SGJ/Q1801: Solar EV Charging Entrepreneur

Brief Job Description

Solar EV Charging Entrepreneur sets up an enterprise with an aim to provide a charging service to EV users while utilizing solar energy (along with Grid power). This entrepreneur shall establish, setup and operate solar integrated EV charging stations/ Charging Point(s) for charging of electric vehicles at various locations to enable faster adoption of EVs across the country by ensuring safe, reliable, accessible, low cost and sustainable EV charging infrastructure. As per the revised guidelines by the Ministry of Power, an entity is free to set up public charging EV stations provided such stations meet the technical, safety, performance standards and protocol laid down by the Ministry of Power, Bureau of Energy Efficiency (BEE) and Central Electricity Authority

Personal Attributes

The individual shall have an ability to take initiative, handle pressure and shall be motivated with good interpersonal and problem solving skills. The individual shall also have leadership skills and organized with their work and act with integrity while performing multiple tasks for the customers with quality and timely deliverables.

Applicable National Occupational Standards (NOS)

Compulsory NOS:

1. SGJ/N1803: Introduction to Solar EV Charging system and the evolving business opportunities it offers
2. SGJ/N0149: Elements of Solar powered EV Charging Stations
3. SGJ/N1811: Survey site and discuss key parameters for installation of Solar based EV charging system
4. SGJ/N1812: Assess lifecycle cost for installing Solar based EV charging station
5. SGJ/N1813: Analyse key technical and business aspects for design, installation, and O&M of solar based EV charging system
6. SGJ/N1814: Oversee the Installation and O&M of Solar based EV charging system
7. SGJ/N1815: Case studies showcasing best practices in system installation, successful operations across concerned business models of solar based EV charging station
8. SGJ/N1816: Maintain Personal Health and Safety with Solar plus Grid EV charging infrastructure
9. DGT/VSQ/N0102: Employability Skills (60 Hours)

Qualification Pack (QP) Parameters

SGJ/N1803: Introduction to Solar EV Charging system and the evolving business opportunities it offers

Description

This unit outlines the basics of solar based EV charging system along with the opportunities this growing segment offers

Scope

The scope covers the following :

- Solar based EV charging

Elements and Performance Criteria

Introduction to the Solar EV Charging system and the evolving business opportunities it offers

To be competent, the user/individual on the job must be able to:

PC1. Discuss key drivers, sectoral trends, regulation, market potential and overall business opportunities in Solar EV Charging/ EV Charging infrastructure.

PC2. Briefly explain the prospects, process, and practice of solar /Grid based EV charging stations in India for all types of EVs including 2 wheelers, 4 wheelers etc.

PC3. Discuss the importance of building good EV Charging Stations Infrastructure (for all EVs including 2 Wheelers, 3 wheelers and other large vehicles) & the overall Business Opportunities in solar EV charging space

PC4. Discuss the importance of solar energy and its application in EV Charging Station

PC5. Discuss basics of EV Charging Stations & Technologies

PC6. Explain different charging types and chargers

PC7. Discuss the overall concept of solar based EV charging system, illustrate its schematic and explain the functions of all key components.

PC8. Discuss the importance of this job role and the basic skills, knowledge and responsibility of an entrepreneur in solar EV charging market space.

PC9. Discuss the enabling environment including key policy and regulatory provisions both at centre and states level which are critical to accelerate the adoption of solar based EV charging stations.

PC10. Discuss key innovative business solutions, appropriate technologies, and support infrastructure which are required for faster adoption of EV in the country.

PC11. Show how to analyse key drivers, sectoral trends, regulations, market potential and overall business opportunities solar based EV Charging business offers

PC12. Show how solar based EV charging solutions are critical to low carbon mobility

PC13. Illustrate schematic of solar based EV charging station and explain the functions of all key components

PC14. Outline the advantages of solar based EV charging system and show how it can be useful for entrepreneurs/ Charging operators/ other users etc.

PC15. Show how conducive policy and regulatory provisions both at centre and states levels are critical to accelerate the adoption of EV and create solar based EV charging stations

PC16. Show how innovative business solutions, appropriate technologies, and support infrastructure are required for faster adoption of EVs in the country

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

KU1. guidelines, standards, policies, and procedures followed in the company

KU2. responsibilities and reporting structures within the organisation

KU3. government/corporate policies and guidelines on workplace safety

KU4. document information using appropriate forms

KU5. authorization requirements from concerned stakeholder

KU6. tools required for system installation and operations

KU7. dos and dont's of material/equipment handling and storage

KU8. organization's procedures for minimizing waste and maximising resource utilisation

Generic Skills (GS)

User/individual on the job needs to know how to:

GS1. complete documentation applicable to the role

GS2. read english and/or vernacular language

GS3. read and understand manuals, health and safety instructions, memos, other company documents as applicable for the role

GS4. read different signage and understand the various color codes, as per standard electrical, mechanical and civil nomenclature

GS5. express statements or information clearly so that others can hear and understand

GS6. design and follow code of conduct

GS7. manage relationships with customers with intent on satisfying its requirements for service delivery

SGJ/N0149: Elements of Solar powered EV Charging Stations

Description

This unit outlines the basic functions of key elements of solar powered EV charging system

Scope

The scope covers the following :

- Key elements of Solar power EV charging system and their functions

Elements and Performance Criteria

Key elements of Solar power EV charging system and their functions

To be competent, the user/individual on the job must be able to:

PC1. Discuss the detailed prospects, concept and practice of utilisation of solar based EV charging system in India.

PC2. Discuss EV and charging technologies, Types of chargers, types of battery and classification, battery packs assembly, charging/discharging cycles, C rating, State of Charge/State of Health, functions of battery charging protection and management system etc.

PC3. Discuss how to estimate the load demand and accordingly size the capacity of solar power plant for a suitable EV charging station

PC4. Discuss solar power plant components and its installation and O&M for effective operation

PC5. Discuss inverter, Motor, Drivetrain, Regenerative Breaking etc

PC6. Discuss key aspects of health and safety for setting up and manage solar based EV charging station

PC7. Discuss how services like Battery Swapping is critical to EV charging business

PC8. Discuss to check for compliance with applicable environmental, waste management and disposal regulations

PC9. Outline the detailed prospects, concepts and practice of utilisation of solar based EV charging system in India.

PC10. Demonstrate the functions of all key components of the solar based EV charging system including: Chargers, Battery packs, Battery management system, Motor, Drivetrain

PC11. Show how to estimate the sizing of solar plant based on the demand for charging EV.

PC12. Show the installation and commissioning of solar power plant for application in EV charging

PC13. Show how solar plant with or without battery can be effectively integrated with conventional grid-based system for charging EVs.

PC14. Show how battery swapping also offers more opportunities for EV charging business.

PC15. Show how to check for compliance with applicable environmental, waste management and disposal regulations

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

KU1. legislative, organizational, site requirements and procedures for setting up and operating solar plus grid based EV charging station

KU2. work in varying weather conditions

KU3. company's code of conduct, documentation, installation and customer support policy

KU4. document information using appropriate corporate forms

KU5. derive the calculations for energy generated from solar radiation in a given area and meeting load demand

KU6. time management concepts including discipline, punctuality, act in time on commitment and quality productive time

KU7. knowledge of all the technical parameters and interpretation of specification sheets of different commercially available components

KU8. definition of the general terminology used by the industry

Generic Skills (GS)

User/individual on the job needs to know how to:

GS1. read and understand manuals, health and safety instructions, memos, other company documents

GS2. organize work to meet deadlines

GS3. work constructively and collaboratively with others

GS4. choose best methods to complete assigned tasks

GS5. make timely decisions for efficient utilization of resources

GS6. follow code of conduct.

GS7. apply domain knowledge, observations and data to select course of action to perform tasks related to solar based EV charging station installation and operation .

GS8. to clearly communicate customers' requirements.

Assessment Criteria

SGJ/N1811: Survey site and discuss key parameters for installation of Solar based EV charging system

Description

This unit outlines all key attributes for site survey and related parameters for installing solar based EV charging system

Scope

The scope covers the following :

- Site survey and other parameters for solar based EV charging system installation

Elements and Performance Criteria

Site survey and other parameters for solar based EV charging system installation

To be competent, the user/individual on the job must be able to:

PC1. Discuss various parameters for site analysis/site selection considerations for setting up solar plus grid based EV charging station

PC2. Discuss design guidelines, Site Drawings, Site Plans etc for setting up solar based EV charging station.

PC3. Discuss how to assess the potential and demand for solar plus grid based charging station.

PC4. Discuss all key aspects of a Detailed Project Report (DPR) and explain how to develop a bankable DPR for installing solar based EV charging station.

PC5. Illustrate and Analyse various parameters for siting the location for installing solar based EV charging system.

PC6. Show how to assess various site- specific considerations for installing solar based EV charging station

PC7. Demonstrate how to perform calculations for estimating demand/potential for EV charging and solar power provision.

PC8. Illustrate all key aspects of a Detailed Project Report (DPR) and show how to develop a bankable DPR for installing solar based EV charging station.

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

KU1. relevant policies of the company including system installation and customer support policy

KU2. company's reporting structure, reporting protocol and documentation required

KU3. general terminologies associated with solar power plant and EV charging system

KU4. basic concepts of site survey for solar power plant

KU5. units and symbols for energy generated , load along with basic calculations to derive those

KU6. mechanical and electrical features necessary for the installation and long life of the solar based EV charging system

KU7. legislative, organizational, site requirements and procedures
KU8. site survey and DPR for evaluation purposes
KU9. types of allied civil/ structural works for system installation

Generic Skills (GS)

User/individual on the job needs to know how to:

GS1. read and understand manuals, health and safety instructions, memos, other documents of the company
GS2. identify various codes as per standard technical electrical, mechanical and civil nomenclature
GS3. respond appropriately to any queries while recognizing problems and providing solutions
GS4. communicate with Supervisor
GS5. organize work to meet deadlines
GS6. work constructively and collaboratively with others
GS7. follow code of conduct
GS8. manage relationships with customers with intent on satisfying requirements of service
GS9. support the team in scheduling tasks
GS10. follow organizational rule-based decision making process

SGJ/N1812: Assess lifecycle cost for installing Solar based EV charging station

Description

This unit outlines how to assess the lifecycle cost of installing and operating solar based EV charging station

Scope

The scope covers the following :

- Lifecycle cost for installing Solar based EV charging system

Elements and Performance Criteria

Lifecycle cost for installing Solar based EV charging system

To be competent, the user/individual on the job must be able to:

PC1. Discuss how to identify cost parameters for various solar based EV charging station components

PC2. Explain how system installation and overall project cost varies depending upon the site conditions and related requirements

PC3. Discuss CAPEX and O&M related cost for maintaining the solar based EV charging system

PC4. Discuss how to estimate lifecycle cost for solar based EV charging station installation and its utilisation.

PC5. Discuss how to estimate annual savings, payback period, IRR etc and how to include those in the detailed project report (DPR) for setting up a solar based EV charging system.

PC6. Discuss any incentive/subsidy available and process for availing that for setting up solar based EV charging system in a given location.

PC7. Discuss how to assess various options to raise required capital for setting up solar based EV charging station

PC8. Discuss how innovative solutions like battery swapping reduces the cost for EV while helping in facilitating its deployment.

PC9. Show how to analyse various cost parameters for various components of solar based EV charging system.

PC10. Demonstrate how system installation cost can vary depending upon the site conditions and related requirements.

PC11. Show how CAPEX and O&M related cost for maintaining the system can be calculated.

PC12. Show how available incentives/subsidy etc can be availed for setting up solar based EV charging system

PC13. Show how to Calculate lifecycle cost of solar based EV charging station along with its business viability including annual savings and payback period

PC14. Outline various options for mobilising required capital from various sources for setting up solar based EV charging station

PC15. Show how business opportunities like battery swapping can also be leveraged to reduce the overall cost for EV charging business.

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

KU1. prepare costing and cost benefit analysis for project including payback, IRR etc.
KU2. project budgeting
KU3. business models for solar based EV charging system
KU4. policy, regulations and procedures for installing and operating a solar plus grid based EV charging station
KU5. various parameters of electricity bills
KU6. availing low cost financing and subsidies

Generic Skills (GS)

User/individual on the job needs to know how to:

GS1. prepare documentation as per relevant industry standards
GS2. work constructively and collaboratively with others
GS3. support the team in scheduling and implementing tasks
GS4. manage relationships with customers with intent on satisfying its requirements for service delivery
GS5. use acquired knowledge of the process for identifying and handling issues
GS6. apply wide range of factual and theoretical knowledge to select the right course of action to perform tasks related to installation and O&M of solar and grid based EV charging station
GS7. follow organisational code of conduct

SGJ/N1813: Analyse key technical and business aspects for design, installation, and O&M of solar based EV charging system

Description

This unit outlines how to analyse all key technical and business aspects for the design, installation and O&M of solar based EV charging system

Scope

The scope covers the following :

- Key technical and business aspects for solar based EV charging system

Elements and Performance Criteria

Key technical and business aspects for solar based EV charging system

To be competent, the user/individual on the job must be able to:

PC1. Discuss key technical aspects of design and specifications of system components including for Sizing suitable Solar PV system, Battery/ Battery Management system, Inverter, Electric Motor, Drive train, Regenerative breaking, EV charging software, Power conversion system etc.

PC2. Discuss schematic and wiring diagrams along with Check list for O&M including preventive maintenance and routine check up and system monitoring for solar plus grid based EV charging station.

PC3. Discuss key financial aspects for choosing quality components and ensuring required industry standards are met.

PC4. Discuss the process for setting up a new business venture including the required registration

PC5. Identify the key ingredients of a business plan/proposal and discuss how to develop that

PC6. Explain fixed and working capital requirements for an enterprise

PC7. Discuss how to apply loan from various financial institutions for setting up an enterprise

PC8. Discuss how to prepare an effective presentation for marketing and business development

PC9. Identify the challenges and risks for new entrepreneurs and the possible mitigation measures

PC10. Discuss business development opportunities across various customer types

PC11. Explain how to inculcate good etiquettes, develop good communication/soft skills and manners for effective communicating with the client

PC12. Show how to analyse system components design and specifications

PC13. Demonstrate how to choose design criteria as per assessment of site conditions

PC14. Show how to analyse schematic and wiring diagrams and ensure checklist for system usage, O&M and monitoring for solar plus grid based EV charging station.

PC15. Show how to avail low -cost financing from various financial institutions/Government schemes etc and perform financial analysis like estimating payback, cashflow etc.

PC16. Show how to manage business risks for an enterprise in solar EV charging space

PC17. Show how to effectively support business development activities

PC18. Show how to meet various compliances and other regulatory requirements for creating and running enterprises

PC19. Show how to inculcate good etiquettes, develop good communication/soft skills and manners for effective communicating with the client

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

KU1. government/corporate policies and guidelines on: technology system and workplace safety

KU2. document information using appropriate corporate forms

KU3. tools and tackles required for installation and performing O&M

KU4. basic functioning and operation of different system components

KU5. do's and don'ts of installation and operation of electrical, mechanical and civil components

KU6. installation and O&M work on a solar based EV charging system in accordance with relevant standards and regulations

Generic Skills (GS)

User/individual on the job needs to know how to:

GS1. tools and tackles required for installation

GS2. prepare and maintain documentation

GS3. communicate with employees

GS4. plan and organize work schedule to meet deadlines

GS5. work constructively and collaboratively with others

GS6. prepare organisational code of conduct

GS7. use reasoning skills to identify and resolve basic problems

GS8. use acquired knowledge of the process for identifying and handling issues

GS9. communicate with industries and customers to understand and analyze various strategies, demands, and limitations in the market

SGJ/N1814: Oversee the Installation and O&M of Solar based EV charging system

Description

This unit outlines how to oversee the installation and O&M process of solar based EV charging system

Scope

The scope covers the following :

- Overseeing the installation and O&M process

Elements and Performance Criteria

Overseeing the installation and O&M process

To be competent, the user/individual on the job must be able to:

PC1. Discuss key step by step process to oversee various stages of solar based EV station components including for procurement, assembly, installation, usage, Operations & Maintenance (O&M) and system monitoring.

PC2. Outline overall skills and knowledge required to perform overseeing the completion of various activities for setting up solar based EV charging station.

PC3. plan and implement ways to optimise resource utilisation

PC4. Demonstrate how to oversee the step-by-step process of components procurements, assembly, system installation, overall O&M and monitoring of solar based EV station.

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

KU1. government/corporate policies and guidelines on: technology system installation, O&M and workplace safety

KU2. document information using appropriate corporate forms

KU3. tools and tackles required for installation and performing O&M of Solar based EV charging system

KU4. basic functioning and operation of different system components

KU5. installation and O&M work on a solar based EV charging system in accordance with relevant standards and regulations

KU6. do's and don'ts of installation and operation of electrical, mechanical and civil components

Generic Skills (GS)

User/individual on the job needs to know how to:

GS1. tools and tackles required for installation and O&M of solar plus grid based EV charging system

GS2. prepare and maintain documentation

GS3. communicate with employees

GS4. use reasoning skills to identify and resolve basic problems

GS5. use acquired knowledge of the process for identifying and handling issues

GS6. communicate with industries and various other stakeholders to understand and analyze various strategies, demands, and limitations in the market

Assessment Criteria

Assessment Criteria for Outcomes	Theory Marks	Practical Marks	Project Marks	Viva Marks

SGJ/N1815: Case studies showcasing best practices in system installation, successful operations across concerned business models of solar based EV charging station

Description

This unit outlines best practices from successful case studies on installation and operation of solar based EV charging station

Scope

The scope covers the following :

- Successful case studies of solar based EV charging station

Elements and Performance Criteria

Successful case studies of solar based EV charging station

To be competent, the user/individual on the job must be able to:

PC1. Discuss successful case studies of solar plus grid based EV charging station.

PC2. Identify opportunities for incorporating best practices in system installation and its usage.

PC3. Discuss various business models applicable for solar plus grid based EV charging in the country and show which business model is best suitable for a given market condition.

PC4. Discuss various aspects of battery swapping and other innovative business models applicable for solar plus grid-based EV charging.

PC5. Illustrate and demonstrate how to incorporate best practices on installation and O&M for solar plus grid- based EV charging system

PC6. Show how to adopt key learnings from successful case studies/ experiences

PC7. Show which business model is best suitable for a given market condition

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

KU1. manufacturer's warranty policy

KU2. tools & tackles required for installation and performing O&M

KU3. mechanical and electrical features necessary for the long life of system operation

KU4. dos and dont's of material handling and storage

KU5. relevant codes, standards, guidelines and regulations for system installation and operation

KU6. legislative, organizational, site requirements and procedures for setting up solar plus grid based EV charging

KU7. types of allied civil/ structural works for system installation and operation

KU8. assessing power demand and supply

KU9. work in varying weather conditions and other environmental requirements

Generic Skills (GS)

User/individual on the job needs to know how to:

GS1. read and understand equipment manuals, health and safety instructions, memos, other concerned documents
GS2. take decision with systematic course of actions and/or response
GS3. analyze critical points in day to day tasks and identify control measures to solve the issue
GS4. support the team in scheduling various tasks
GS5. participate in and understand the concerns of all stakeholders including team members and customers
GS6. respond appropriately to any queries
GS7. communicate with employees
GS8. create and define organisation and rule- based decision making process
GS9. take decision with systematic course of actions and/or response
GS10. plan and organize work schedule to meet deadlines

SGJ/N1816: Maintain Personal Health and Safety with Solar plus Grid EV charging infrastructure

Description

This unit outlines measures to be followed for ensuring health and safety during installation and O&M of solar based EV charging system

Scope

The scope covers the following :

- Maintaining Personal Health and Safety

Elements and Performance Criteria

Maintaining Personal Health and Safety

To be competent, the user/individual on the job must be able to:

PC1. Explain the requirement and importance of ensuring personal cleanliness and hygiene.
PC2. Identify proper personal health and safety tools including gloves and masks.
PC3. Demonstrate steps to be followed to maintain personal cleanliness while working at project site
PC4. Explain standard operating procedures of ensuring safety for installation of solar plus grid based EV charging system in accordance with industry practice
PC5. Explain how to identify the first aid materials and administer first-aid.
PC6. Explain how to report immediately to concerned authorities regarding sign and symptoms of illness
PC7. Demonstrate standard operating procedures of safety for installation of solar plus grid based EV charging system in accordance with industry practice
PC8. Demonstrate how to ensure personal cleanliness and hygiene.
PC9. Demonstrate the proper use of Gloves and Masks and other PPE.
PC10. Demonstrate good housekeeping practices and infection control guidelines
PC11. Demonstrate how to identify the location of first aid materials and administer first-aid
PC12. Demonstrate safety operating procedures for installation solar plus grid-based EV charging system
PC13. Demonstrate how to follow processes specified for disposal of hazardous waste, if any

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

KU1. importance of safety drills
KU2. importance of working in clean, hygienic and safe environment
KU3. importance of safety guidelines and PPE

KU4. health and safety roles and responsibilities of relevant personnel within and outside the organization

KU5. reporting procedures in case of breaches or hazards for site safety, accidents and emergency situations

KU6. forms and classification of hazardous substances

KU7. health effect associated with exposure to environmental pollution

KU8. housekeeping activities relevant to task

KU9. symptoms of infection like fever, cough, swelling and inflammation

Generic Skills (GS)

User/individual on the job needs to know how to:

GS1. complete statutory documents relevant to workplace health & safety and hygiene

GS2. identify potential safety risk and report to appropriate authority

GS3. communicate and collaborate with others to incorporate safe and sustainable practice as per industry norms

GS4. interpret general safety guidelines, labels, charts and signage

Assessment Criteria

DGT/VSQ/N0102: Employability Skills (60 Hours)

Description

This unit is about employability skills, Constitutional values, becoming a professional in the 21st Century, digital, financial, and legal literacy, diversity and Inclusion, English and communication skills, customer service, entrepreneurship, and apprenticeship, getting ready for jobs and career development.

Scope

The scope covers the following :

- Introduction to Employability Skills
- Constitutional values - Citizenship
- Becoming a Professional in the 21st Century
- Basic English Skills
- Career Development & Goal Setting
- Communication Skills
- Diversity & Inclusion
- Financial and Legal Literacy
- Essential Digital Skills
- Entrepreneurship
- Customer Service
- Getting ready for Apprenticeship & Jobs

Elements and Performance Criteria

Introduction to Employability Skills

To be competent, the user/individual on the job must be able to:

PC1. identify employability skills required for jobs in various industries

PC2. identify and explore learning and employability portals

Constitutional values – Citizenship

To be competent, the user/individual on the job must be able to:

PC3. recognize the significance of constitutional values, including civic rights and duties, citizenship, responsibility towards society etc. and personal values and ethics such as honesty, integrity, caring and respecting others, etc.

PC4. follow environmentally sustainable practices

Becoming a Professional in the 21st Century

To be competent, the user/individual on the job must be able to:

PC5. recognize the significance of 21st Century Skills for employment

PC6. practice the 21st Century Skills such as Self-Awareness, Behaviour Skills, time management, critical and adaptive thinking, problem-solving, creative thinking, social and cultural awareness, emotional awareness, learning to learn for continuous learning etc. in personal and professional life

Basic English Skills

To be competent, the user/individual on the job must be able to:

PC7. use basic English for everyday conversation in different contexts, in person and over the telephone

PC8. read and understand routine information, notes, instructions, mails, letters etc. written in English

PC9. write short messages, notes, letters, e-mails etc. in English

Career Development & Goal Setting

To be competent, the user/individual on the job must be able to:

PC10. understand the difference between job and career

PC11. prepare a career development plan with short- and long-term goals, based on aptitude

Communication Skills

To be competent, the user/individual on the job must be able to:

PC12. follow verbal and non-verbal communication etiquette and active listening techniques in various settings

PC13. work collaboratively with others in a team

Diversity & Inclusion

To be competent, the user/individual on the job must be able to:

PC14. communicate and behave appropriately with all genders and PwD

PC15. escalate any issues related to sexual harassment at workplace according to POSH Act

Financial and Legal Literacy

To be competent, the user/individual on the job must be able to:

PC16. select financial institutions, products and services as per requirement

PC17. carry out offline and online financial transactions, safely and securely

PC18. identify common components of salary and compute income, expenses, taxes, investments etc

PC19. identify relevant rights and laws and use legal aids to fight against legal exploitation

Essential Digital Skills

To be competent, the user/individual on the job must be able to:

PC20. operate digital devices and carry out basic internet operations securely and safely

PC21. use e- mail and social media platforms and virtual collaboration tools to work effectively

PC22. use basic features of word processor, spreadsheets, and presentations

Entrepreneurship

To be competent, the user/individual on the job must be able to:

PC23. identify different types of Entrepreneurship and Enterprises and assess opportunities for potential business through research

PC24. develop a business plan and a work model, considering the 4Ps of Marketing Product, Price, Place and Promotion

PC25. identify sources of funding, anticipate, and mitigate any financial/ legal hurdles for the potential business opportunity

Customer Service

To be competent, the user/individual on the job must be able to:

PC26. identify different types of customers

PC27. identify and respond to customer requests and needs in a professional manner.

PC28. follow appropriate hygiene and grooming standards

Getting ready for apprenticeship & Jobs

To be competent, the user/individual on the job must be able to:

PC29. create a professional Curriculum vitae (Résumé)

PC30. search for suitable jobs using reliable offline and online sources such as Employment exchange, recruitment agencies, newspapers etc. and job portals, respectively

PC31. apply to identified job openings using offline /online methods as per requirement

PC32. answer questions politely, with clarity and confidence, during recruitment and selection

PC33. identify apprenticeship opportunities and register for it as per guidelines and requirements

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

KU1. need for employability skills and different learning and employability related portals

KU2. various constitutional and personal values

KU3. different environmentally sustainable practices and their importance

KU4. Twenty first (21st) century skills and their importance

KU5. how to use English language for effective verbal (face to face and telephonic) and written communication in formal and informal set up

KU6. importance of career development and setting long- and short-term goals

KU7. about effective communication

KU8. POSH Act

KU9. Gender sensitivity and inclusivity

KU10. different types of financial institutes, products, and services

KU11. how to compute income and expenditure

KU12. importance of maintaining safety and security in offline and online financial transactions

KU13. different legal rights and laws

KU14. different types of digital devices and the procedure to operate them safely and securely

KU15. how to create and operate an e- mail account and use applications such as word processors, spreadsheets etc.

KU16. how to identify business opportunities

KU17. types and needs of customers

KU18. how to apply for a job and prepare for an interview

KU19. apprenticeship scheme and the process of registering on apprenticeship portal

Generic Skills (GS)

User/individual on the job needs to know how to:

GS1. read and write different types of documents/instructions/correspondence

GS2. communicate effectively using appropriate language in formal and informal settings

GS3. behave politely and appropriately with all
GS4. how to work in a virtual mode
GS5. perform calculations efficiently
GS6. solve problems effectively
GS7. pay attention to details
GS8. manage time efficiently
GS9. maintain hygiene and sanitization to avoid infection

Assessment Guidelines and Assessment Weightage

Assessment Guidelines

1. Criteria for assessment for each Qualification will be created by the Sector Skill Council/Awarding Body. Each Element/ Performance Criteria (PC) will be assigned marks proportional to its importance in NOS.SSC/AB will also lay down proportion of marks for Theory and Skills Practical for each Element/ PC.

2. The assessment for the theory part will be based on knowledge bank of questions created by the SSC/AB.

3. Assessment will be conducted for all compulsory NOS, and where applicable, on the selected elective/option NOS/set of NOS.

4. Individual assessment agencies will create unique question papers for theory part for each candidate at each examination/training center (as per assessment criteria below).

5. Individual assessment agencies will create unique evaluations for skill practical for every student at each examination/ training center based on these criteria.

6. To pass the assessment,every trainee should score the Recommended Pass % aggregate for the Qualification.

7. In case of unsuccessful completion, the trainee may seek reassessment on the Qualification.

Minimum Aggregate Passing % at QP Level : 70

(**Please note**: Every Trainee should score a minimum aggregate passing percentage as specified above, to successfully clear the Qualification Pack assessment.)

Acronyms

NOS	National Occupational Standard(s)
NSQF	National Skills Qualifications Framework
QP	Qualifications Pack
TVET	Technical and Vocational Education and Training

Glossary

Sector	Sector is a conglomeration of different business operations having similar business and interests. It may also be defined as a distinct subset of the economy whose components share similar characteristics and interests.
Sub-sector	Sub-sector is derived from a further breakdown based on the characteristics and interests of its components.
Occupation	Occupation is a set of job roles, which perform similar/ related set of functions in an industry.
Job role	Job role defines a unique set of functions that together form a unique employment opportunity in an organisation.
Occupational Standards (OS)	OS specify the standards of performance an individual must achieve when carrying out a function in the workplace, together with the Knowledge and Understanding (KU) they need to meet that standard consistently. Occupational Standards are applicable both in the Indian and global contexts.
Performance Criteria (PC)	Performance Criteria (PC) are statements that together specify the standard of performance required when carrying out a task.
National Occupational Standards (NOS)	NOS are occupational standards which apply uniquely in the Indian context.
Qualifications Pack (QP)	QP comprises the set of OS, together with the educational, training and other criteria required to perform a job role. A QP is assigned a unique qualifications pack code.
Unit Code	Unit code is a unique identifier for an Occupational Standard, which is denoted by an 'N'
Unit Title	Unit title gives a clear overall statement about what the incumbent should be able to do.
Description	Description gives a short summary of the unit content. This would be helpful to anyone searching on a database to verify that this is the appropriate OS they are looking for.
Scope	Scope is a set of statements specifying the range of variables that an individual may have to deal with in carrying out the function which have a critical impact on quality of performance required.

Knowledge and Understanding (KU)	Knowledge and Understanding (KU) are statements which together specify the technical, generic, professional and organisational specific knowledge that an individual needs in order to perform to the required standard.
Organisational Context	Organisational context includes the way the organisation is structured and how it operates, including the extent of operative knowledge managers have of their relevant areas of responsibility.
Technical Knowledge	Technical knowledge is the specific knowledge needed to accomplish specific designated responsibilities.
Core Skills/ Generic Skills (GS)	Core skills or Generic Skills (GS) are a group of skills that are the key to learning and working in today's world. These skills are typically needed in any work environment in today's world. These skills are typically needed in any work environment. In the context of the OS, these include communication related skills that are applicable to most job roles.
Electives	Electives are NOS/set of NOS that are identified by the sector as contributive to specialization in a job role. There may be multiple electives within a QP for each specialized job role. Trainees must select at least one elective for the successful completion of a QP with Electives.
Options	Options are NOS/set of NOS that are identified by the sector as additional skills. There may be multiple options within a QP. It is not mandatory to select any of the options to complete a QP with Options.
