AAS/Q0606: Airline First Officer- Ground Level

Brief Job Description

An Airline First Officer (Ground Level) assists in pre-flight planning, operational coordination, and aircraft readiness checks to support efficient and safe flight operations. They collaborate with flight crews, ground staff, and dispatch teams to ensure compliance with safety protocols and regulations. This role serves as a preparatory stage for full in-flight responsibilities as a licensed First Officer.

Personal Attributes

A first officer attributes would include good communication skills, responsibility. He/She should be meet the medical and attitude standards set forth by the regulator/organisation

Applicable National Occupational Standards (NOS)

Compulsory NOS:

1. [AAS/N0612: Perform Pre-flight tasks of Pilot](#)
2. [AAS/N0636: Air Navigation and Aviation Meteorology](#)
3. [AAS/N0613: Undertake Flight operations](#)
4. [AAS/N0614: Perform- Post flight tasks of Pilot](#)
5. [AAS/N0637: Aircraft Systems and Performance](#)
6. [AAS/N0638: Multi-Crew Coordination \(MCC\)](#)
7. [AAS/N0639: Air Regulations and Aviation Law](#)
8. [AAS/N0640: Radio Telephony & Communication \(VFR/IFR\)](#)
9. [AAS/N0641: Technical Liaising with Air Traffic Control \(ATC\)](#)
10. [AAS/N0642: Troubleshooting and System Monitoring](#)
11. [AAS/N0502: Follow safety and security procedures](#)
12. [DGT/VSQ/N0102: Employability Skills \(60 Hours\)](#)

Qualification Pack

AAS/N0612: Perform Pre-flight tasks of Pilot

Description

This unit is about the pre-flight tasks to be performed by the First officer

Scope

The scope covers the following :

- Perform Pre Flight Check
- Prepare flight Plan
- Provide Pre flight briefing

Elements and Performance Criteria

Perform pre-flight checks

To be competent, the user/individual on the job must be able to:

- PC1.** perform visual check of the external of the aircraft in accordance with organisation procedures, aircraft manufacturer procedures and recommendations and regulatory procedures
- PC2.** perform cabin inspection and ensure all required documentations are updated and available in the cabin (according to company policy and regulatory requirements)
- PC3.** communicate with the engineers on ground and check for any maintenance logs which can impact the aircraft operations
- PC4.** ensure if any Minimum Equipment Lists (MEL's) required are in place and appropriate action for the MEL has been factored in during flight operations
- PC5.** assist the commander as requested
- PC6.** carry out pre-flight checks of instruments, engines, fuel and safety systems

Prepare flight plan

To be competent, the user/individual on the job must be able to:

- PC7.** gather and interpret all the required data about weather from MET and ground crew
- PC8.** gather and interpret all the required data from ATC regarding the route to be followed during the flight
- PC9.** calculate the fuel required for the flight
- PC10.** provide necessary instructions for fuelling of the aircraft in lines with the calculated fuel
- PC11.** prepare the flight plan
- PC12.** assist the commander as required
- PC13.** provide information to ATC as an when required

Provide pre-flight briefing

To be competent, the user/individual on the job must be able to:

- PC14.** provide a preflight briefing to the cabin crew with details of the flight

Knowledge and Understanding (KU)

Qualification Pack

The individual on the job needs to know and understand:

- KU1.** hazard identification and risk management as defined within the organisational policy and procedures
- KU2.** regulatory requirements and organisations procedures for maintenance of safety and security standards and individuals role and responsibilities in relation to this
- KU3.** how and when to report hazards
- KU4.** the limits of responsibility for dealing with hazards
- KU5.** the organisations emergency procedures for different emergency situations and the importance of following these
- KU6.** the importance of maintaining high standards of safety and security
- KU7.** implications that any non-compliance with safety and security may have on individuals and the organisation
- KU8.** different visual defects that can be observed on an aircraft
- KU9.** how to troubleshoot the maintenance messages from the aircraft computer
- KU10.** how to summon medical assistance and the emergency services, where necessary
- KU11.** how to use the health, safety and accident reporting procedures and the importance of these
- KU12.** regulatory guidelines on dealing with safety and security emergencies
- KU13.** how to ascertain if the aircraft is safe to operate the given flight

Generic Skills (GS)

User/individual on the job needs to know how to:

- GS1.** complete accurately well written report in English language detailing the situations of emergency with attention to detail
- GS2.** read instructions/guidelines/procedures/rules
- GS3.** listen to and orally communicate information with all concerned
- GS4.** make decisions on a suitable course of action or response if permitted by the authority matrix
- GS5.** monitor efficient functioning of all activities
- GS6.** plan and organise work to achieve targets and deadlines
- GS7.** communicate with passengers and other stakeholders in a courteous manner
- GS8.** maintain cordial work relationship
- GS9.** identify trends/common causes for errors and suggest possible solutions to the supervisor / management
- GS10.** identify and correct errors
- GS11.** analyse best possible solutions (cost, time, effort, etc.) suited for operations
- GS12.** concentrate on task at hand and complete it without errors
- GS13.** apply balanced judgments to different situations

AAS/N0636: Air Navigation and Aviation Meteorology

Description

This unit is about applying the principles of air navigation and interpreting meteorological information essential for flight planning and operation

Scope

The scope covers the following :

- Understanding navigation principles
- Interpreting navigation charts and instruments
- Applying meteorological knowledge to flight planning and safety

Elements and Performance Criteria

Apply Principles of Air Navigation

To be competent, the user/individual on the job must be able to:

- PC1.** Interpret different types of aeronautical charts (e.g., enroute charts, approach charts)
- PC2.** Identify and use navigation aids such as VOR, NDB, ADF, DME, and GPS
- PC3.** Calculate headings, bearings, tracks, and estimated time of arrival using flight computer or manual methods.
- PC4.** Understand and apply the principles of dead reckoning and radio navigation.
- PC5.** Determine position using radar, GNSS, and other navigation systems.
- PC6.** Identify airspace structures, restrictions, and regulations.

Interpret Meteorological Data

To be competent, the user/individual on the job must be able to:

- PC7.** Read and interpret aviation weather reports and forecasts (METAR, TAF, SIGMET, AIRMET).
- PC8.** Analyze upper wind charts, surface analysis charts, and prognostic charts.
- PC9.** Understand weather patterns, cloud formations, visibility, turbulence, and icing conditions.
- PC10.** Correlate meteorological information with route planning and aircraft performance.
- PC11.** Identify hazardous weather conditions that may affect flight operations.

Integrate Navigation and Meteorology into Flight Planning

To be competent, the user/individual on the job must be able to:

- PC12.** Integrate wind and weather data to adjust flight path and fuel calculation.
- PC13.** Liaise with ATC and meteorological units for real-time updates
- PC14.** Update the commander on any weather-related advisories or route deviations.
- PC15.** Ensure compliance with safety margins based on navigational and meteorological inputs.

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

Qualification Pack

- KU1.** Basic principles of geography, cartography, and navigation systems.
- KU2.** Functions and use of navigational aids and instruments.
- KU3.** International Civil Aviation Organization (ICAO) conventions on navigation and meteorology
- KU4.** Meteorological phenomena relevant to aviation, including wind shear, thunderstorms, and jet streams
- KU5.** Impact of weather on aircraft operations and fuel efficiency
- KU6.** Aviation meteorology codes and symbols (e.g., METAR, TAF decoding)
- KU7.** Safety practices and procedures for navigating in adverse weather

Generic Skills (GS)

User/individual on the job needs to know how to:

- GS1.** Write and interpret navigational logs and meteorological briefings.
- GS2.** Read and understand navigation charts, weather charts, and documentation.
- GS3.** Communicate effectively with ATC and meteorological authorities.
- GS4.** Make real-time decisions based on weather and navigational changes
- GS5.** Use tools such as E6B flight computers and electronic navigation systems
- GS6.** Maintain situational awareness and ensure flight safety
- GS7.** Identify and report anomalies in route planning or weather patterns.

AAS/N0613: Undertake Flight operations

Description

This unit is about the tasks to be performed by the First officer during flight operations

Scope

The scope covers the following :

- Undertake Flight Operation

Elements and Performance Criteria

Undertake flight operations

To be competent, the user/individual on the job must be able to:

- PC1.** liaise with ATC for take-off clearance and route confirmation
- PC2.** pilot the aircraft for safe operations through take off - climb - cruise - descent and landing phase of the flight
- PC3.** continuously monitor the aircraft system during the flight
- PC4.** undertake troubleshooting as and when required
- PC5.** continuously monitor air traffic in visual range, aircraft position and weather updates en-route the flight
- PC6.** undertake announcements to the passengers as and when required
- PC7.** communicate with cabin crew to provide necessary information or gather updates as and when required
- PC8.** perform any other function as requested by the commander of the flight

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** hazard identification and risk management as defined within the organisational policy and procedures
- KU2.** regulatory requirements and organisations procedures for maintenance of safety and security standards and individuals role and responsibilities in relation to this
- KU3.** how and when to report hazards
- KU4.** the limits of responsibility for dealing with hazards
- KU5.** the organisations emergency procedures for different emergency situations and the importance of following these
- KU6.** the importance of maintaining high standards of safety and security
- KU7.** implications that any non-compliance with safety and security may have on individuals and the organization
- KU8.** how to pilot the aircraft

Qualification Pack

- KU9.** different types of breaches of safety and security and how and when to report these
- KU10.** how to summon medical assistance and the emergency services, where necessary
- KU11.** how to use the health, safety and accident reporting procedures and the importance of these
- KU12.** regulatory guidelines on dealing with safety and security emergencies

Generic Skills (GS)

AAS/N0614: Perform- Post flight tasks of Pilot

Description

This unit is about the pre-flight checks to be performed by the First officer

Scope

The scope covers the following :

- Post flight tasks

Elements and Performance Criteria

Post flight tasks

To be competent, the user/individual on the job must be able to:

- PC1.** communicate with the ground staff to update the nature of flight undertaken
- PC2.** provide additional information as deemed necessary to the engineering team on any of the maintenance related events during the flight
- PC3.** perform a debriefing session with the cabin crew
- PC4.** provide inputs to the flight dispatch team on any visual weather conditions or air traffic as noticed during the flight
- PC5.** update the pilot report for the flight
- PC6.** undertake announcements to the passengers as and when required
- PC7.** perform any other function as requested by the commander of the flight

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** hazard identification and risk management as defined within the organisational policy and procedures
- KU2.** regulatory requirements and organisations procedures for maintenance of safety and security standards and individuals role and responsibilities in relation to this

AAS/N0637: Aircraft Systems and Performance

Description

This unit is about monitoring and managing aircraft systems and understanding performance parameters to support safe and efficient flight operations.

Scope

The scope covers the following :

- Monitor aircraft systems
- Understand aircraft performance parameters

Elements and Performance Criteria

Monitor aircraft systems

To be competent, the user/individual on the job must be able to:

- PC1.** Monitor and interpret aircraft instruments and gauges.
- PC2.** Monitor the aircraft systems (electrical, hydraulic, pneumatic, etc.) as per procedure
- PC3.** Identify and respond to warning signs and alerts from systems.
- PC4.** Communicate and coordinate with the commander and cabin crew for any abnormalities.
- PC5.** Respond to system failures as per standard operating procedures (SOPs).
- PC6.** Log any relevant system malfunctions or deviations and report them as per norm.
- PC7.** Assist in in-flight troubleshooting of system alerts/faults.

Understand aircraft performance parameters

To be competent, the user/individual on the job must be able to:

- PC8.** Read and interpret aircraft performance charts.
- PC9.** Calculate take-off and landing distances as per current conditions.
- PC10.** Determine aircraft weight and balance limitations.
- PC11.** Apply performance-related information during various phases of flight.
- PC12.** Communicate any performance-related limitations to the commander.
- PC13.** Cross-check fuel consumption, endurance, and range.
- PC14.** Comply with performance-related regulatory norms.

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** Organizational procedures and safety requirements related to aircraft systems and performance

Qualification Pack

- KU2.**
- The layout, functionality, and operation of various aircraft systems, including:
 - Electrical system
 - Hydraulic and pneumatic systems
 - Environmental control systems (air conditioning, pressurization)
 - Fuel system
 - Ice and rain protection systems
 - Landing gear and braking systems
 - Engine and auxiliary power units (APUs)
- KU3.** Aircraft instrumentation systems and the interpretation of cockpit indications and system warnings
- KU4.** Principles of flight and how they relate to aircraft performance (e.g., lift, drag, thrust, weight)
- KU5.**
- Parameters influencing aircraft performance including:
 - Aircraft weight and balance
 - Weather conditions (temperature, pressure, wind, humidity)
 - Runway length and surface conditions
 - Altitude and terrain considerations
- KU6.**
- Performance charts, graphs, and manuals used to calculate:
 - Take-off and landing distances
 - Climb and cruise performance
 - Fuel consumption and endurance
- KU7.** Effects of system failures on aircraft performance and appropriate corrective actions
- KU8.** Checklists and standard operating procedures (SOPs) for monitoring and managing aircraft systems
- KU9.** Regulatory requirements (e.g., DGCA/ICAO/EASA) relating to aircraft performance and system operations
- KU10.** Emergency procedures related to system malfunctions and performance degradation
- KU11.** How to document and report discrepancies or issues related to aircraft system

Generic Skills (GS)

User/individual on the job needs to know how to:

- GS1.** Accurately complete well-written reports in English, detailing situations involving aircraft systems and performance, with attention to detail.
- GS2.** Read and comprehend instructions, guidelines, procedures, and rules related to aircraft systems and performance.
- GS3.** Listen to and orally communicate information effectively with all concerned parties, including the commander, cabin crew, and ground personnel.
- GS4.** Make informed decisions on suitable courses of action or responses, as permitted by the authority matrix, especially during system abnormalities or performance issues.
- GS5.** Monitor the efficient functioning of all aircraft systems and performance parameters during flight operations.
- GS6.** Plan and organize work to achieve targets and deadlines, ensuring all pre-flight and in-flight checks are completed timely.
- GS7.** Communicate with passengers and other stakeholders in a courteous and clear manner, providing necessary information regarding flight performance when required.

Qualification Pack

- GS8.** Maintain cordial work relationships with colleagues, fostering a collaborative environment for efficient operations.
- GS9.** Identify trends or common causes for errors in system operations and suggest possible solutions to the supervisor or management.
- GS10.** Recognize and correct errors promptly to maintain optimal aircraft performance and safety.
- GS11.** Analyze the best possible solutions considering factors like cost, time, and effort, especially when addressing system malfunctions or performance issues.
- GS12.** Concentrate on tasks at hand and complete them without errors, ensuring all system checks and performance assessments are accurate.
- GS13.** Apply balanced judgments to different situations, particularly when assessing system alerts or performance deviations

Qualification Pack

AAS/N0638: Multi-Crew Coordination (MCC)

Description

The Multi-Crew Cooperation (MCC) course is designed to equip pilots with the essential skills and knowledge required for effective teamwork in multi-crew aircraft operations. It emphasizes the development of non-technical competencies crucial for safe and efficient flight operations.

Scope

The scope covers the following :

- Enhancing Flight Crew Coordination
- Improving Safety Through Non-Technical Skills
- Preparation for Airline Transport and Type Rating
- Standardizing Crew Resource Management (CRM) Practices

Elements and Performance Criteria

Communication:

To be competent, the user/individual on the job must be able to:

- PC1.** Utilize clear, concise, and effective verbal and non-verbal communication to ensure mutual understanding among crew members.
- PC2.** Employ standard aviation phraseology and terminology to prevent misunderstandings.
- PC3.** Actively listen and provide timely feedback to confirm message reception and comprehension.

Leadership and Teamwork:

To be competent, the user/individual on the job must be able to:

- PC4.** Demonstrate leadership by providing clear direction, making informed decisions, and assuming responsibility when necessary.
- PC5.** Foster a cooperative and respectful team environment, encouraging input and collaboration from all crew members.
- PC6.** Effectively delegate tasks and monitor their completion to maintain operational efficiency.

Situational Awareness:

To be competent, the user/individual on the job must be able to:

- PC7.** Maintain an accurate understanding of the aircraft's status, flight parameters, and surrounding environment.
- PC8.** Anticipate potential threats and changes in the flight environment to enable proactive decision-making.
- PC9.** Continuously update mental models based on new information and observations.

Workload Management:

To be competent, the user/individual on the job must be able to:

- PC10.** Prioritize tasks effectively, especially during high-demand phases of flight, to prevent tasks saturation.

Qualification Pack

PC11. Distribute workload appropriately among crew members to optimize performance and reduce stress.

PC12. Recognize signs of overload in oneself and others and take corrective actions as needed.

Problem Solving and Decision Making:

To be competent, the user/individual on the job must be able to:

PC13. Apply structured approaches to assess situations, identify problems, and develop viable solutions.

PC14. Evaluate potential risks, benefits, and consequences of decisions within the operational context.

PC15. Collaborate with crew members to reach consensus and implement effective solutions.

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

KU1. Understand the principles of effective communication within a multi-crew environment.

KU2. Comprehend leadership roles and team dynamics essential for coordinated flight operations.

KU3. Recognize the importance of situational awareness and its impact on flight safety.

KU4. Understand workload management strategies to maintain efficiency during flight operations.

KU5. Familiarize with problem-solving techniques and decision-making processes in a multi-crew context.

KU6. Learn monitoring and cross-checking procedures to ensure operational accuracy.

KU7. Understand task-sharing methodologies to optimize crew resource utilization.

KU8. Gain knowledge of standard operating procedures (SOPs) and checklist usage for consistent operations.

KU9. Recognize the significance of briefings in establishing clear operational plans.

KU10. Understand the operation of flight management systems and their role in navigation and performance monitoring.

KU11. Familiarize with normal and abnormal aircraft system operations to handle various flights scenarios.

Generic Skills (GS)

User/individual on the job needs to know how to:

GS1. Effective communication skills for clear and concise information exchange among crew members.

GS2. Strong leadership and teamwork abilities to foster a collaborative and efficient cockpit environment.

GS3. Enhanced situational awareness to accurately perceive and comprehend all aspects of the flight environment.

GS4. Proficient workload management to prioritize tasks and maintain operational efficiency under varying flight conditions.

Qualification Pack

- GS5.** Effective problem-solving and decision-making skills to assess situations, evaluate risks, and implement appropriate solutions promptly.
- GS6.** Diligent monitoring and cross-checking to detect and correct errors, ensuring flight safety and adherence to procedures.
- GS7.** Efficient task sharing to distribute responsibilities appropriately among crew members, optimizing performance and reducing fatigue.
- GS8.** Adherence to standard operating procedures through the effective use of checklists to ensure consistency and safety in operations.

Qualification Pack

Assessment Criteria

Assessment Criteria for Outcomes	Theory Marks	Practical Marks	Project Marks	Viva Marks
<i>Communication:</i>	9	12	-	-
PC1. Utilize clear, concise, and effective verbal and non-verbal communication to ensure mutual understanding among crew members.	3	4	-	-
PC2. Employ standard aviation phraseology and terminology to prevent misunderstandings.	3	4	-	-
PC3. Actively listen and provide timely feedback to confirm message reception and comprehension.	3	4	-	-
<i>Leadership and Teamwork:</i>	9	12	-	-
PC4. Demonstrate leadership by providing clear direction, making informed decisions, and assuming responsibility when necessary.	3	4	-	-
PC5. Foster a cooperative and respectful team environment, encouraging input and collaboration from all crew members.	3	4	-	-
PC6. Effectively delegate tasks and monitor their completion to maintain operational efficiency.	3	4	-	-

AAS/N0639: Air Regulations and Aviation Law

Description

This unit encompasses the comprehensive understanding of international and national aviation laws, regulations, and standards that govern civil aviation operations. It aims to equip individuals with the knowledge required to ensure compliance with legal frameworks, maintain safety, and uphold security in aviation activities.

Scope

The scope covers the following :

- International conventions and agreements
- National aviation regulations
- Airspace sovereignty and usage
- Safety and maintenance standards
- Liability, insurance, and passenger rights

Elements and Performance Criteria

Comprehend International Aviation Conventions

To be competent, the user/individual on the job must be able to:

- PC1.** Explain the principles and provisions of key international aviation conventions, such as the Chicago Convention.
- PC2.** Describe the role and functions of the International Civil Aviation Organization (ICAO) in global aviation regulation.
- PC3.** Interpret how international agreements influence national aviation laws and operations.

Understand National Aviation Regulations

To be competent, the user/individual on the job must be able to:

- PC4.** Identify the national regulatory bodies responsible for civil aviation oversight.
- PC5.** Summarize the key regulations and standards set forth by national aviation authorities.
- PC6.** Ensure operational compliance with national aviation laws and procedures.

Recognize Airspace Sovereignty and Usage

To be competent, the user/individual on the job must be able to:

- PC7.** Define the concept of airspace sovereignty and its implications for flight operations.
- PC8.** Explain the classification of airspace and the rules governing each category.
- PC9.** Navigate airspace in accordance with international and national regulations.

Adherent to Safety and Maintenance Standards

To be competent, the user/individual on the job must be able to:

- PC10.** Outline the safety protocols mandated by aviation laws for aircraft operation and maintenance.
- PC11.** Implement procedures to ensure compliance with safety standards during flight operations.
- PC12.** Report and address safety violations in line with regulatory requirements.

Qualification Pack

Understand Liability, Insurance, and Passenger Rights

To be competent, the user/individual on the job must be able to:

- PC13.** Explain the legal liabilities of air carriers in the event of accidents or incidents.
- PC14.** Describe the insurance requirements for commercial aviation operations.
- PC15.** Advocate for passenger rights as stipulated in aviation law.

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** The historical development and objectives of international aviation conventions.
- KU2.** The structure and functions of national and international aviation regulatory bodies.
- KU3.** The legal framework governing airspace classification and usage.
- KU4.** Safety management systems and their regulatory foundations.
- KU5.** The principles of liability and insurance in the context of aviation operations.
- KU6.** Passenger rights and the legal obligations of air carriers.

Generic Skills (GS)

User/individual on the job needs to know how to:

- GS1.** Interpreting and applying complex legal documents and regulations.
- GS2.** Communicating effectively with regulatory authorities and stakeholders.
- GS3.** Analyzing and resolving compliance issues.
- GS4.** Maintaining meticulous records to demonstrate regulatory adherence.
- GS5.** Staying informed about updates and changes in aviation laws and regulations

AAS/N0640: Radio Telephony & Communication (VFR/IFR)

Description

This unit focuses on the proficient use of radiotelephony and communication procedures essential for pilots operating under Visual Flight Rules (VFR) and Instrument Flight Rules (IFR). It emphasizes clear, concise, and standardized communication to ensure safety and efficiency in airspace operations.

Scope

The scope covers the following :

- Understanding and applying standard phraseology
- Operating communication equipment
- Managing communications during normal and emergency situations
- Coordinating with Air Traffic Control (ATC)
- Complying with communication protocols for VFR and IFR operations

Elements and Performance Criteria

Utilize Standard Radio Phraseology

To be competent, the user/individual on the job must be able to:

- PC1.** Employ standard phraseology as specified in the Aeronautical Information Manual (AIM) and Pilot/Controller Glossary to ensure clear and concise communication.
- PC2.** Avoid the use of jargon, slang, or non-standard terms during radio transmissions to prevent misunderstandings.

Operate Communication Equipment Effectively

To be competent, the user/individual on the job must be able to:

- PC3.** Select and tune appropriate communication frequencies for different phases of flight, including departure, en-route, and arrival.
- PC4.** Conduct radio checks to confirm the serviceability of communication equipment before and during flights.

Manage Communications During Normal and Emergency Situations

To be competent, the user/individual on the job must be able to:

- PC5.** Maintain vigilance in monitoring ATC communications for potential traffic conflicts, especially when operating on active runways or during final approach.
- PC6.** Recognize and respond appropriately to ATC light signals in the event of radio communication failure.
- PC7.** Implement standard procedures for lost communication scenarios, including route and altitude adherence as per regulatory guidelines.

Coordinate with Air Traffic Control (ATC)

To be competent, the user/individual on the job must be able to:

- PC8.** Establish and maintain two-way communication with the appropriate ATC facility, providing necessary information such as aircraft identification, position, and intentions.

Qualification Pack

PC9. Acknowledge and comply promptly with ATC instructions and clearances to ensure safety and efficient flight operations.

Comply with Communication Protocols for VFR and IFR Operations

To be competent, the user/individual on the job must be able to:

PC10. Differentiate between communication procedures specific to VFR and IFR operations, including departure information and in-flight reporting requirements.

PC11. Provide position reports and flight progress updates as required under VFR and IFR, ensuring adherence to ATC expectations and airspace regulations.

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

KU1. • The structure and content of standard radiotelephony phraseology as outlined in aviation communication manuals.

KU2. The functions and operations of aircraft communication systems and their integration with navigation equipment.

KU3. Procedures for establishing and maintaining communication with various ATC facilities, including ground, tower, approach, and en-route controllers.

KU4. Regulatory requirements and standard practices for communication during normal operations and in emergency situations, such as radio failure or distress signals.

KU5. Differences in communication protocols between VFR and IFR operations, including specific reporting points and clearances required for each.

Generic Skills (GS)

User/individual on the job needs to know how to:

GS1. Clearly articulating messages over the radio, ensuring accurate transmission and reception of information.

GS2. Actively listening to ATC instructions and other traffic communications to maintain situational awareness.

GS3. Interpreting and responding appropriately to both verbal and non-verbal ATC communications, including light signals.

GS4. Managing workload effectively to balance communication tasks with other piloting responsibilities.

GS5. Applying problem-solving skills in the event of communication equipment failure or misunderstandings with ATC.

Qualification Pack

AAS/N0641: Technical Liaising with Air Traffic Control (ATC)

Description

This unit focuses on the competencies required for effective technical coordination and communication between pilots and Air Traffic Control (ATC). It emphasizes the importance of clear exchange of information to ensure safe and efficient flight operations.

Scope

The scope covers the following :

- Establishing and maintaining communication with ATC
- Understanding and complying with ATC instructions
- Coordinating flight plans and clearances
- Managing in-flight changes and emergencies
- Utilizing standard phraseology and protocols

Elements and Performance Criteria

Establish and Maintain Communication with ATC

To be competent, the user/individual on the job must be able to:

- PC1.** Initiate contact with the appropriate ATC facility using standard communication protocols.
- PC2.** Maintain continuous and clear communication with ATC throughout all phases of flight.

Understand and comply with ATC Instructions

To be competent, the user/individual on the job must be able to:

- PC3.** Accurately interpret ATC instructions and clearances.
- PC4.** Execute ATC directives promptly and report back upon completion.

Coordinating Flight Plans and Clearances

To be competent, the user/individual on the job must be able to:

- PC5.** Submit and confirm flight plans with ATC prior to departure.
- PC6.** Obtain necessary clearances for route, altitude, and any deviations.

Manage In-flight Changes and Emergencies

To be competent, the user/individual on the job must be able to:

- PC7.** Communicate any deviations from the flight plan to ATC, including changes due to weather or technical issues.
- PC8.** Inform ATC immediately in case of emergencies and follow their instructions for resolution.

Utilize Standard Phraseology and Protocols

To be competent, the user/individual on the job must be able to:

- PC9.** Use standard aviation phraseology to prevent misunderstandings.
- PC10.** Adhere to established communication protocols to ensure clarity and brevity.

Knowledge and Understanding (KU)

Qualification Pack

The individual on the job needs to know and understand:

- KU1.** ATC communication procedures and protocols.
- KU2.** Standard phraseology as per aviation regulations.
- KU3.** Flight planning processes and ATC coordination.
- KU4.** Procedures for handling in-flight emergencies in coordination with ATC.
- KU5.** Regulatory requirements for pilot-ATC communications.

Generic Skills (GS)

User/individual on the job needs to know how to:

- GS1.** Effective verbal communication.
- GS2.** Active listening and comprehension.
- GS3.** Decision-making under pressure.
- GS4.** Situational awareness.
- GS5.** Time management and prioritization.

AAS/N0642: Troubleshooting and System Monitoring

Description

This unit focuses on the competencies required for pilots to effectively monitor aircraft systems and perform troubleshooting procedures. It emphasizes the importance of proactive system oversight to ensure flight safety and operational efficiency.

Scope

The scope covers the following :

- Monitoring aircraft systems and performance parameters
- Identifying and diagnosing system anomalies
- Implementing corrective actions for system malfunctions
- Utilizing onboard diagnostic tools and instruments
- Coordinating with maintenance and engineering teams

Elements and Performance Criteria

Monitor Aircraft Systems and Performance

To be competent, the user/individual on the job must be able to:

- PC1.** Continuously observe and assess aircraft systems, including engines, electrical, hydraulic, and avionics, to ensure they operate within normal parameters.
- PC2.** Utilize flight instruments and onboard monitoring systems to track performance metrics such as air speed, altitude, fuel flow, and engine parameters.

Identify and Diagnose System Anomalies

To be competent, the user/individual on the job must be able to:

- PC3.** Recognize deviations from standard operating parameters and promptly identify potential system malfunctions or failures.
- PC4.** Analyze warning messages, alerts, and instrument readings to diagnose the nature and severity of system issues.

Implement Corrective Actions for System Malfunctions

To be competent, the user/individual on the job must be able to:

- PC5.** Follow established procedures and checklists to address and rectify identified system anomalies or failures.
- PC6.** Communicate effectively with the flight crew to coordinate responses to system issues and ensure collective situational awareness.

Utilize Onboard Diagnostic Tools and Instruments

To be competent, the user/individual on the job must be able to:

- PC7.** Operate diagnostic equipment such as the Electronic Centralized Aircraft Monitor (ECAM) or Engine Indicating and Crew Alerting System (EICAS) to interpret system data and alerts.
- PC8.** Interpret data from flight data monitoring systems to anticipate potential system/component problems before they escalate.

Coordinate with Maintenance and Engineering Teams

Qualification Pack

To be competent, the user/individual on the job must be able to:

- PC9.** Document and report system malfunctions and troubleshooting actions taken during flight to maintenance personnel upon landing.
- PC10.** Collaborate with engineering teams to provide detailed accounts of in-flight issues to aid in accurate diagnosis and rectification.

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** Principles of operation for aircraft systems, including propulsion, electrical, hydraulic, and avionics.
- KU2.** Standard operating procedures for system monitoring and anomaly detection.
- KU3.** Use and interpretation of onboard diagnostic tools and alerting systems.
- KU4.** Emergency procedures related to system failures and malfunctions.
- KU5.** Protocols for communication and coordination with flight crew and maintenance teams regarding technical issues.

Generic Skills (GS)

User/individual on the job needs to know how to:

- GS1.** Analyzing complex information from various system indicators to make informed decisions.
- GS2.** Communicating clearly and effectively with crew members and ground personnel.
- GS3.** Applying problem-solving skills to troubleshoot and resolve system issues promptly.
- GS4.** Maintaining attention to detail to detect subtle changes in system performance.
- GS5.** Managing time efficiently to balance system monitoring with other piloting responsibilities.

AAS/N0502: Follow safety and security procedures

Description

This unit is about following awareness of safety and security procedures as defined by organisational policies and regulatory guidelines

Elements and Performance Criteria

Comprehending the safety and security procedures for conduct of operations

To be competent, the user/individual on the job must be able to:

- PC1.** comply with the organisations safety and security policies and procedures
- PC2.** comply with the regulatory guidelines on safe conduct of operations and maintenance of conditions to thwart any acts of unlawful interference
- PC3.** report any identified breaches of safety, and security policies and procedures to the designated person
- PC4.** coordinate with other resources at the workplace (within and outside the organisation) to achieve safe and secure environment
- PC5.** identify and mitigate any safety and security hazards like illness, accidents, fires or acts of unlawful interference if it falls within the limits of individuals authority
- PC6.** report any hazards outside the individuals authority to the relevant person in line with organisational procedures and regulatory guidelines
- PC7.** follow organisations emergency procedures for accidents, fires or acts of unlawful interference
- PC8.** identify and recommend opportunities for improving health, safety, and security to the designated person
- PC9.** complete all health and safety records are updates and procedures well defined

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** hazard identification and risk management as defined within the organisational policy and procedures
- KU2.** regulatory requirements and organisations procedures for maintenance of safety and security standards and individuals role and responsibilities in relation to this
- KU3.** how and when to report hazards
- KU4.** the limits of responsibility for dealing with hazards
- KU5.** the organisations emergency procedures for different emergency situations and the importance of following these
- KU6.** importance of maintaining high standards of safety and security
- KU7.** implications that any non-compliance with safety and security may have on individuals and the organisation
- KU8.** different types of breaches of safety and security and how and when to report these
- KU9.** evacuation procedures for workers and passengers

Qualification Pack

- KU10.** how to summon medical assistance and the emergency services, where necessary
KU11. how to use the health, safety and accident reporting procedures and the importance of these
KU12. regulatory guidelines on dealing with safety and security emergencies

Generic Skills (GS)

User/individual on the job needs to know how to:

- GS1.** complete accurately a well written report in English language detailing the situations of emergency with attention to detail
GS2. read instructions/guidelines/procedures/rules
GS3. listen to and orally communicate information with all concerned
GS4. make decisions on a suitable course of action or response if permitted by the authority matrix
GS5. monitor efficient functioning of all activities
GS6. plan and organize work to achieve targets and deadlines
GS7. communicate with passengers and other stakeholders in a courteous manner
GS8. maintain cordial work relationship
GS9. identify trends/common causes for errors and suggest possible solutions to the supervisor / management
GS10. identify and correct errors
GS11. analyse best possible solutions (cost, time, effort, etc.) suited for operations
GS12. concentrate on task at hand and complete it without error
GS13. apply balanced judgments to different situations

Qualification Pack

Assessment Guidelines and Assessment Weightage

Assessment Guidelines

1. Criteria for assessment for each Qualification Pack will be created by the Sector Skill Council. Each Element/ Performance Criteria (PC) will be assigned marks proportional to its importance in NOS. SSC will also lay down proportion of marks for Theory and Skills Practical for each Element/ PC.
2. The assessment for the theory part will be based on knowledge bank of questions created by the SSC.
3. Assessment will be conducted for all compulsory NOS, and where applicable, on the selected elective/option NOS/set of NOS.
4. Individual assessment agencies will create unique question papers for theory part for each candidate at each examination/training center (as per assessment criteria below).
5. Individual assessment agencies will create unique evaluations for skill practical for every student at each examination/ training center based on these criteria.
6. To pass the Qualification Pack assessment, every trainee should score the Recommended Pass % aggregate for the QP.
7. In case of unsuccessful completion, the trainee may seek reassessment on the Qualification Pack.

Qualification Pack

Minimum Aggregate Passing % at QP Level : 70

(Please note: Every Trainee should score a minimum aggregate passing percentage as specified above, to successfully clear the Qualification Pack assessment.)

Glossary

Sector	Sector is a conglomeration of different business operations having similar business and interests. It may also be defined as a distinct subset of the economy whose components share similar characteristics and interests.
Sub-sector	Sub-sector is derived from a further breakdown based on the characteristics and interests of its components.
Occupation	Occupation is a set of job roles, which perform similar/ related set of functions in an industry.
Job role	Job role defines a unique set of functions that together form a unique employment opportunity in an organisation.
Occupational Standards (OS)	OS specify the standards of performance an individual must achieve when carrying out a function in the workplace, together with the Knowledge and Understanding (KU) they need to meet that standard consistently. Occupational Standards are applicable both in the Indian and global contexts.
Performance Criteria (PC)	Performance Criteria (PC) are statements that together specify the standard of performance required when carrying out a task.
National Occupational Standards (NOS)	NOS are occupational standards which apply uniquely in the Indian context.
Qualifications Pack (QP)	QP comprises the set of OS, together with the educational, training and other criteria required to perform a job role. A QP is assigned a unique qualifications pack code.
Unit Code	Unit code is a unique identifier for an Occupational Standard, which is denoted by an 'N'
Unit Title	Unit title gives a clear overall statement about what the incumbent should be able to do.
Description	Description gives a short summary of the unit content. This would be helpful to anyone searching on a database to verify that this is the appropriate OS they are looking for.
Scope	Scope is a set of statements specifying the range of variables that an individual may have to deal with in carrying out the function which have a critical impact on quality of performance required.

Qualification Pack

Knowledge and Understanding (KU)	Knowledge and Understanding (KU) are statements which together specify the technical, generic, professional and organisational specific knowledge that an individual needs in order to perform to the required standard.
Organisational Context	Organisational context includes the way the organisation is structured and how it operates, including the extent of operative knowledge managers have of their relevant areas of responsibility.
Technical Knowledge	Technical knowledge is the specific knowledge needed to accomplish specific designated responsibilities.
Core Skills/ Generic Skills (GS)	Core skills or Generic Skills (GS) are a group of skills that are the key to learning and working in today's world. These skills are typically needed in any work environment in today's world. These skills are typically needed in any work environment. In the context of the OS, these include communication related skills that are applicable to most job roles.
Electives	Electives are NOS/set of NOS that are identified by the sector as contributive to specialization in a job role. There may be multiple electives within a QP for each specialized job role. Trainees must select at least one elective for the successful completion of a QP with Electives.
Options	Options are NOS/set of NOS that are identified by the sector as additional skills. There may be multiple options within a QP. It is not mandatory to select any of the options to complete a QP with Options.
