Qualification Pack

ASC/Q1440: Autobody Repair

Brief Job Description

An Autobody Repair is responsible for replacing, removing or re installing autobody parts by following the standards of the organization.

Personal Attributes

The person should be patient, organised, team-oriented and have the ability to work for long hours in adverse conditions. They should be keen observers and have an eye for detail and quality.

Applicable National Occupational Standards (NOS)

Compulsory NOS:

1. [ASC/N9823: Work organization and management, communication and interpersonal skills](#)
2. [ASC/N1471: Diagnosis and correction preparation](#)
3. [ASC/N1472: Replace necessary welding on parts/panels](#)
4. [ASC/N1473: Remove, re-install or replace, and align exterior and/or interior parts and panels](#)
5. [ASC/N1474: Operate and/or manipulate any tools or equipment necessary to perform autobody repairs](#)
6. [ASC/N1475: Cosmetic repair of plastic non-structural components](#)

Qualification Pack

ASC/N9823: Work organization and management, communication and interpersonal skills

Description

This NOS unit is about implementing safety, planning work, adopting sustainable practices for optimising the use of resources. This is also about communicating with team members, superior and others.

Scope

The scope covers the following :

- Manage work and resources
- Communicate effectively with others

Elements and Performance Criteria

Manage work and resources

To be competent, the user/individual on the job must be able to:

- PC1.** Apply occupational health and safety regulations and best practice to the autobody repair industry
- PC2.** Use correctly and maintain personal protective clothing and equipment
- PC3.** Set-up, use, adjust, and maintain all specialist repair equipment, promote health and safety practices in the workplace, apply all recommendations and guidance provided by suppliers and manufacturers of equipment or products
- PC4.** Adhere to MSDS (manufacturers safety data sheets)
- PC5.** Adopt correct procedures for handling and disposing of environmentally harmful products
- PC6.** Select and use products that are environmentally acceptable
- PC7.** Dispose of environmentally harmful products in a safe and responsible way

Communicate effectively with others

To be competent, the user/individual on the job must be able to:

- PC8.** Exchange information and engage with others in the workplace
- PC9.** Engage with customers and suppliers as provider and customer

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** Current occupational health and safety regulations relating to the autobody repair industry
- KU2.** Correct use and maintenance of all personal protective equipment and clothing
- KU3.** All recommendations and information published by the suppliers or manufacturers of products and equipment
- KU4.** The process for maintaining and using specialized equipment
- KU5.** Terminology that relates to body repair processes

Qualification Pack

- KU6.** Terminology that relates to the car body structure and its construction
- KU7.** The importance of the correct handling and disposal of environmentally harmful products
- KU8.** The basis for communication and interpersonal skills
- KU9.** The potential harmful impact that repair products and processes can have upon the environment
- KU10.** The range and purposes of documentation, including written and technical drawings including schematic and wiring diagrams, in both paper based and electronic forms
- KU11.** The technical language associated with the occupation
- KU12.** The industry standards required for inspection and fault reporting in oral, written, and electronic formats
- KU13.** The required standards for customer service and care

Qualification Pack

ASC/N1471: Diagnosis and correction preparation

Description

This NOS unit is about diagnosing the vehicle body for defects and preparing for the repairing work.

Scope

The scope covers the following :

- Diagnosing defects and preparing for correction

Elements and Performance Criteria

Diagnosing defects and preparing for correction

To be competent, the user/individual on the job must be able to:

- PC1.** Mount vehicles on anchoring equipment
- PC2.** Interpret manufacturers' specifications relating to vehicles
- PC3.** Diagnose the extent of vehicle damage and rectify the damage with reference to vehicle manufacturers' recommendations
- PC4.** Determine the direction of damaging forces or impacts
- PC5.** Determine the extent of damaging forces or impacts
- PC6.** Determine structural damage using appropriate diagnostic equipment
- PC7.** Identify the correct and appropriate methods for the correction of vehicle body damage
- PC8.** Reinstatement correct vehicle body alignment
- PC9.** 'Rough out' damaged sections or panels prior to removal for replacement
- PC10.** Straighten and align damaged structural components and reinstate their dimensional accuracy
- PC11.** Diagnose frame damage using any of: Toe in gauge, Self-alignment gauge, Tram gauge
- PC12.** Refer vehicle manuals etc.
- PC13.** Repair and align full frame and suspension damage

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** The safety recommendations associated with mounting and pulling damaged vehicle bodies
- KU2.** Manufacturers data and how this is translated to the vehicle body
- KU3.** The principles surrounding the construction of vehicle bodies, including light passenger, light commercial and commercial
- KU4.** Characteristics of body construction relating to strength and collision protection
- KU5.** Characteristics and purpose of structural and non-structural panels
- KU6.** The importance of positional correctness to retain vehicle safety and performance

Qualification Pack

- KU7.** The role played by direction and weight of damage force as well as the impact at the point of collision
- KU8.** How position, shape and strength of individual body assemblies affect the paths taken by collision forces
- KU9.** Methods of correcting forces including vectors of force Principles of body jig measuring systems including bracket and computerized measuring systems
- KU10.** Principles of pulling systems including fixed post, swinging arm and vector systems

Qualification Pack

ASC/N1472: Replace necessary welding on parts/panels

Description

This NOS is about carrying out or replacing welding on the necessary parts.

Scope

The scope covers the following :

- Replacing welding on the necessary parts/panels

Elements and Performance Criteria

Replacing welding on the necessary parts/panels

To be competent, the user/individual on the job must be able to:

- PC1.** Repair or replace structural parts correctly including composites (GRP, carbon)
- PC2.** Remove structural panels with minimal disturbance to surrounding panels and prepare surfaces appropriately to receive new parts
- PC3.** Prepare replacement parts to ensure correct fit up and alignment
- PC4.** Remove welded panels (rails, rear quarter panels, pillars, structural body panels etc.)
- PC5.** Replace major welded panels or panel assemblies at manufacturers' seam positions
- PC6.** Carry out structural part replacement using sectioning methods and procedures
- PC7.** Use correct welding procedures when replacing structural parts, taking into consideration materials being joined, the identity of parts and unforeseen hazards such as brake, fuel and electrical lines
- PC8.** Replace structural panels using any of the following jointing methods: MIG welding, MIG brazing, Riveting and bonding
- PC9.** Carry out welding procedures necessary to complete the repair (MAGS): Resistance spot welding, MIG Brazing
- PC10.** Dress weld seams using sanding/grinding operations

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** The importance of following manufacturers' recommended repair methods and warranty procedures
- KU2.** Suitable methods of identifying fixing types weld positions and weld types
- KU3.** Methods of safely and cleanly removing fastenings to free damaged panels for replacement
- KU4.** Use, setting and maintenance of pneumatic tools used for panel removal and replacement
- KU5.** Principles of operation and adjustment of welding systems used for panel replacement including MAGS, Resistance spot and MIG brazing
- KU6.** Processes and procedures for preparing replacement panel work and panel fixing positions

Qualification Pack

- KU7.** The importance of realigning structural parts and assemblies to reinstate vehicle integrity and driving characteristics
- KU8.** Principles of reinstating suitable corrosion protection to replaced parts
- KU9.** The importance of working within agreed time schedules

Qualification Pack

ASC/N1473: Remove, re-install or replace, and align exterior and/or interior parts and panels

Description

This NOS is about removing, re-installing or replacing, and aligning exterior and/or interior parts and panels of the vehicle.

Scope

The scope covers the following :

- Removing, replacing and aligning exterior and/or interior parts/panels

Elements and Performance Criteria

Removing, replacing and aligning exterior and/or interior parts/panels

To be competent, the user/individual on the job must be able to:

- PC1.** Remove and re-install or attach parts and/or body panels (hoods, fenders, doors etc.) using any of the following methods: Screwed, Riveted, Bolted, Clipped, Bonded
- PC2.** Tag removed items for replacement and reassembly
- PC3.** Re-align replaced parts to manufacturers' given tolerances where available for panel alignment and/or torque settings
- PC4.** Remove, replace and adjust exterior/interior trims and/or other part necessary to complete repairs

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** The principles underpinning the use of any of the above fastening systems
- KU2.** The types, availability and varieties of the above systems
- KU3.** The range of tools used to carry out remove and replace operations and their safe/correct uses
- KU4.** The range of methods for removing and replacing individual panels and parts methods used to align replaced parts and panels to reinstate manufacturers original settings

ASC/N1474: Operate and/or manipulate any tools or equipment necessary to perform autobody repairs

Description

This NOS is about using required tools or equipment necessary to perform autobody repairs.

Scope

The scope covers the following :

- Using tools or equipment for autobody repairs

Elements and Performance Criteria

Using tools or equipment for autobody repairs

To be competent, the user/individual on the job must be able to:

- PC1.** Select, assemble and correctly operate hydraulic push/pulling equipment such as bench mounted, rack or Porto-Power etc.
- PC2.** Manipulate body hammers, spoons, pick and pry bars, body files and any other tools used in the straightening process
- PC3.** Safely and efficiently operate the range of pneumatic tools used in the repair process (e.g. air hammer, disc grinder, file board, shears, adhesive/sealer and rivet guns to include self-piercing riveters etc.)
- PC4.** Safely and efficiently operate electric tools (e.g. welders, pulling tools, power tools)
- PC5.** Use a push set up to execute a pull direction
- PC6.** Prepare the push base to prevent induced damage
- PC7.** Operate a system tester – OBD diagnostic tool

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** The range, selection and assembly of hydraulic pull/push equipment
- KU2.** The characteristics of common metals such as low carbon steel, high strength steels (HSS), ultra-high strength steels (UHSS)
- KU3.** The direct effects of correct positioning, direction of push/pull etc.
- KU4.** The principles behind the operation and maintenance of hydraulic push/pull equipment
- KU5.** The range of set ups, ram ends and their purposes

ASC/N1475: Cosmetic repair of plastic non-structural components

Description

This NOS is about repairing of plastic non-structural components of the vehicle.

Scope

The scope covers the following :

- Repairing of plastic non-structural components

Elements and Performance Criteria

Repairing of plastic non-structural components

To be competent, the user/individual on the job must be able to:

- PC1.** Remove, replace, repair plastic non-structural components
- PC2.** Use OEM repair methods for both manufacturers and product suppliers
- PC3.** Perform repairs needed to complete safe repairs to components
- PC4.** Manually test sensors or systems to a “road safe” standard before handing vehicles back to customers

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** The safety recommendations placed around correct repairs of nonstructural cosmetic panels, e.g. bumpers, headlights, plastic outer trims
- KU2.** The operation of the range of plastic panels and bumpers which may include parking sensors and ADAS systems
- KU3.** Manufacturers removal, replacement, repair, and testing procedures
- KU4.** Health and safety procedures around safe repairs directly from the OEM guidance

Assessment Guidelines and Assessment Weightage

Assessment Guidelines

1. Criteria for assessment for each Qualification Pack will be created by the Sector Skill Council. Each Performance Criteria (PC) (PC) will be assigned marks proportional to its importance in NOS. SSC will also lay down proportion of marks for Theory and Skills Practical for each PC.
2. The assessment for the theory part will be based on knowledge bank of questions created by the SSC.
3. Individual assessment agencies will create unique question papers for theory part for each candidate at each examination/training centre (as per assessment criteria below).
4. Individual assessment agencies will create unique evaluations for skill practical for every student at each examination/ training centre based on these criteria.
5. In case of successfully passing only certain number of NOSs, the trainee is eligible to take subsequent assessment on the balance NOS's to pass the Qualification Pack.

Qualification Pack

6. In case of unsuccessful completion, the trainee may seek reassessment on the Qualification Pack

Minimum Aggregate Passing % at QP Level : 70

(Please note: Every Trainee should score a minimum aggregate passing percentage as specified above, to successfully clear the Qualification Pack assessment.)

Assessment Weightage

Glossary

Sector	Sector is a conglomeration of different business operations having similar business and interests. It may also be defined as a distinct subset of the economy whose components share similar characteristics and interests.
Sub-sector	Sub-sector is derived from a further breakdown based on the characteristics and interests of its components.
Occupation	Occupation is a set of job roles, which perform similar/ related set of functions in an industry.
Job role	Job role defines a unique set of functions that together form a unique employment opportunity in an organisation.
Occupational Standards (OS)	OS specify the standards of performance an individual must achieve when carrying out a function in the workplace, together with the Knowledge and Understanding (KU) they need to meet that standard consistently. Occupational Standards are applicable both in the Indian and global contexts.
Performance Criteria (PC)	Performance Criteria (PC) are statements that together specify the standard of performance required when carrying out a task.
National Occupational Standards (NOS)	NOS are occupational standards which apply uniquely in the Indian context.
Qualifications Pack (QP)	QP comprises the set of OS, together with the educational, training and other criteria required to perform a job role. A QP is assigned a unique qualifications pack code.
Unit Code	Unit code is a unique identifier for an Occupational Standard, which is denoted by an 'N'
Unit Title	Unit title gives a clear overall statement about what the incumbent should be able to do.
Description	Description gives a short summary of the unit content. This would be helpful to anyone searching on a database to verify that this is the appropriate OS they are looking for.
Scope	Scope is a set of statements specifying the range of variables that an individual may have to deal with in carrying out the function which have a critical impact on quality of performance required.

Qualification Pack

Knowledge and Understanding (KU)	Knowledge and Understanding (KU) are statements which together specify the technical, generic, professional and organisational specific knowledge that an individual needs in order to perform to the required standard.
Organisational Context	Organisational context includes the way the organisation is structured and how it operates, including the extent of operative knowledge managers have of their relevant areas of responsibility.
Technical Knowledge	Technical knowledge is the specific knowledge needed to accomplish specific designated responsibilities.
Core Skills/ Generic Skills (GS)	Core skills or Generic Skills (GS) are a group of skills that are the key to learning and working in today's world. These skills are typically needed in any work environment in today's world. These skills are typically needed in any work environment. In the context of the OS, these include communication related skills that are applicable to most job roles.
Electives	Electives are NOS/set of NOS that are identified by the sector as contributive to specialization in a job role. There may be multiple electives within a QP for each specialized job role. Trainees must select at least one elective for the successful completion of a QP with Electives.
Options	Options are NOS/set of NOS that are identified by the sector as additional skills. There may be multiple options within a QP. It is not mandatory to select any of the options to complete a QP with Options.
