MSU/AGR/Q0101: Large Cardamom Organic Cultivation and Management

Brief Job Description

On completion of this course, the candidate will be able to select and prepare the area and soil for large cardamom cultivation, carry out propagation activities, and perform essential maintenance during the cultivation process. They will also be skilled in harvesting large cardamom produce and undertaking post-harvest activities to enhance profitability. In addition, the candidate will be trained to manage organic crop cultivation sustainably, ensuring health and safety standards are maintained throughout the cultivation and processing phases.

Personal Attributes

Candidates for this role should possess strong analytical skills to assess soil and environmental conditions, along with attention to detail for monitoring plant health. A problem-solving mindset is essential for troubleshooting cultivation challenges. Effective communication and adaptability will aid in collaboration and responding to changing conditions. A commitment to sustainability and organic farming practices is vital, as is the physical stamina to handle demanding tasks. Strong time management skills and a proactive attitude toward improving techniques are important, alongside a solid understanding of health and safety regulations in agriculture.

Applicable National Occupational Standards (NOS)

Qualification Pack

MSU/AGR/N0107: Select and prepare area and soil for large cardamoms cultivation

Description

In this OS unit, candidate will learn to select a site with suitable conditions for growing large cardamom, prepare area for large cardamom cultivation and prepare soil to receive plants.

Scope

The scope covers the following :

- Select a site with suitable conditions for growing large cardamom
- Prepare area for large cardamom cultivation
- Prepare soil to receive plants

Elements and Performance Criteria

Select a site with suitable conditions for growing large cardamom

To be competent, the user/individual on the job must be able to:

- PC1.** Research and identify potential areas available for large cardamom cultivation.
- PC2.** Analyse the altitude, slope, rainfall, humidity, climatic events and ambient air temperature for selecting an area for the cultivation of large cardamom.
- PC3.** Get the soil tested from authorized centres.
- PC4.** Determine if soil conditions are suitable for growing large cardamom. (Soil conditions: fertility of the soil, the nature of the subsoil, soil depth, land topography and its effect on water flow, no contamination in the soil such as heavy metals or pollutants, etc.)
- PC5.** Analyse the availability of compatible shade trees in the selected area.
- PC6.** Identify primary and secondary sources of water and the quality of water available at the site.

Prepare area for large cardamom cultivation

To be competent, the user/individual on the job must be able to:

- PC7.** Identify the hazards of growing large cardamom and possible precautions to take.
- PC8.** Design the layout of the farm providing windbreaks, plantation area as well as other necessary facilities like water source, office space, nursery, irrigation channels, shade trees, roads, fence, etc.
- PC9.** Clear the site of unwanted plant material and general debris without burning organic matter.
- PC10.** Return to the topsoil, the crop residue and other organic farm materials such as green manure, organic mulches and poultry/cattle manure in judicious proportions to replace nutrients removed in the previous harvest.
- PC11.** Interpret scale plans to identify dimensions, shapes and positions to be marked on the land and features to be produced.
- PC12.** Transfer various dimensions accurately from scale plans onto the land, using triangulation, running lines and offsets. (Various dimensions: geometric shapes such as rectangles, circles, hexagons, and ellipses, construction of right angle, irregular shapes)

Qualification Pack

- PC13.** Organise as per plan for facilities like water supply station, electricity, compost pit, fencing, etc.
- PC14.** Co-ordinate with the vendor for installation and integration of water supply systems such as sprinkler or drip irrigation system.

Prepare soil to receive plants

To be competent, the user/individual on the job must be able to:

- PC15.** Determine soil type e.g., clay loam, sandy loam as well as soil texture, structure, pH and land conditions.
- PC16.** Manage soil acidity by applying liming materials, primarily ground limestone.
- PC17.** Ascertain soil preparation techniques and organic soil improvement needs.
- PC18.** Apply primary cultivation methods to prepare the land for planting safely and as planned. (Primary Cultivation: ploughing, harrowing, digging, etc.)
- PC19.** Apply secondary cultivation methods to prepare the land for planting safely and as planned. (Secondary cultivation: hoeing, raking, levelling, consolidation, fertilising and mulching).
- PC20.** Perform traditional methods for land preparation such as clearing the land, pit preparation, topsoil preparation, etc.
- PC21.** Plant compatible shade trees with proper spacing to provide uniform shade in the area for the plantation well ahead of the plantation.

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** The large cardamom markets
- KU2.** Benefits of large cardamom cultivation and processing
- KU3.** Large cardamom cultivation areas
- KU4.** Local and improved varieties of cultivars
- KU5.** Suitable climatic conditions for large cardamom cultivation in the region
- KU6.** Suitable location features and soil conditions
- KU7.** Common primary and secondary sources of water
- KU8.** Hazards to large cardamom cultivation and people in the land and precautions to be taken to eliminate hazards
- KU9.** Process, tools and techniques used for clearing the land
- KU10.** Drawback of burning organic materials and crop residue
- KU11.** Typical farm layout and farm plan for large cardamom cultivation
- KU12.** Process, tools and techniques used for marking out the land
- KU13.** Various facilities required for a large cardamom farm and their ideal placement vis-a-vis farm layout
- KU14.** Sprinkler and drip Irrigation system installation process and precautions
- KU15.** Suitable soil type for large cardamom cultivation
- KU16.** Soil preparation and organic soil improvement techniques
- KU17.** Type of organic matter that can be returned to the soil and that which is restricted for soil preparation

Qualification Pack

- KU18.** Objectives of primary methods for soil cultivation methods and process, tools and techniques used
- KU19.** Objectives of secondary methods for soil cultivation and process, tools and techniques used
- KU20.** Traditional and scientific methods for soil cultivation and their benefits
- KU21.** Use of shade trees, its benefits, process and types of trees

Qualification Pack

MSU/AGR/N0101: Carry out propagation activities for large cardamom.

Description

In this OS unit, the candidate will learn to procure and prepare propagation material, prepare primary and secondary nurseries for propagating large cardamom seeds, transplant seedlings into the field and propagate large cardamom seeds through suckers.

Scope

The scope covers the following :

- Procure and prepare propagation material
- Prepare primary and secondary nurseries for propagating large cardamom through seeds
- Transplant seedlings into the field
- Propagate large cardamom through suckers

Elements and Performance Criteria

Procure and prepare propagation material

To be competent, the user/individual on the job must be able to:

- PC1.** Identify local and improved varieties of cultivars that are disease resistant, high yield, organic certified or chemically untreated and have been tested and practised in the area.
- PC2.** Select the type of large cardamom that can be grown profitably based on market need, prices, production costs, time to harvest and disease resistance.
- PC3.** Identify suitable propagation material such as seeds, seedlings and suckers as per the type of large cardamom and the agro-climatic conditions.
- PC4.** Identify authorised vendors/suppliers of organic propagation material.
- PC5.** Ascertain the quality of seeds, seedlings or suckers from each source (Quality: free from pests and diseases, high survival rate, right age, high yield, etc.)
- PC6.** Ascertain the prevailing market price for the propagation material.
- PC7.** Procure the organic propagation material from the selected authorised vendor.
- PC8.** Store the propagation material in a storage space that is free of infestation and has climatic conditions suitable for the planting material.
- PC9.** Prepare bio-inputs for propagation material treatment
- PC10.** Implement the organic propagation material treatment process appropriately
- PC11.** Apply appropriate organic pesticides and fungicides in the dosage recommended by experts/manufacturers, to the propagation material as per the prevalent pests and diseases in a given agroclimatic zone.

Prepare primary and secondary nurseries for propagating large cardamom through seeds

To be competent, the user/individual on the job must be able to:

- PC12.** Prepare and weather seed beds for the primary nursery.
- PC13.** Mix organic manure into the soil.
- PC14.** Make a surface bed of fine tilth.

Qualification Pack

- PC15.** Isolate and protect the nursery from fresh infection.
- PC16.** Sow seeds in adequate numbers with adequate distance between them.
- PC17.** Cover seeds with fine soil and mulch.
- PC18.** Water the soil at appropriate intervals to keep the beds moist.
- PC19.** Remove and re-mulch after germinations in the interspace between the rows.
- PC20.** Erect shade pandals to protect germinations.
- PC21.** Identify and remove the seedlings that are ready for transplantation from the primary nursery into the secondary nursery.
- PC22.** Prepare appropriate beds and soil for the secondary nursery.
- PC23.** Transplant seedlings from the primary to the secondary nursery.
- PC24.** Identify and remove the seedlings that are ready for transplantation from the secondary nursery into the field.

Transplant seedlings into the field

To be competent, the user/individual on the job must be able to:

- PC25.** Prepare transplantation calendar as per the large cardamom varieties selected and climatic and geographic conditions.
- PC26.** Prepare a transplantation plan for the large cardamom variety such as location, timing, spacing, etc.
- PC27.** Select seedlings in an appropriate condition for transplanting (Appropriate condition: growth of 45-60 cm in height with 2-3 tillers, moist roots / root-ball, free from pests and diseases, free from physical damage, containerised and container grown plants, firm in the pot but not root-bound, even grade / typical features, etc.)
- PC28.** Plant the seedlings as per the transplanting plan using appropriate techniques and systems.
- PC29.** Ensure adequate planting distance and depth based on the requirements of the large cardamom variety, rainfall, soil type and fertility, etc.
- PC30.** Provide immediate aftercare for new plantings. (Immediate aftercare: Watering, supporting/staking, mulching, weed control as appropriate to requirements, soil conditions and time of year).

Propagate large cardamom through suckers

To be competent, the user/individual on the job must be able to:

- PC31.** Select high-yielding, disease-free planting material in the form of one mature tiller with two immature tiller or vegetative buds to be used as planting
- PC32.** Set up a nursery at an appropriate distance from the main plantation
- PC33.** Prepare trenches with adequate depth and distance from each other
- PC34.** Prepare and apply organic topsoil suitable for the propagation of suckers
- PC35.** Plant the planting units at an adequate distance in the planting season and provide aftercare

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** Types of propagation material used in Large Cardamom Cultivation and the pros and cons of each

Qualification Pack

- KU2.** How to identify high-yielding, disease-free organic certified or chemically untreated planting material
- KU3.** Selection criteria and quality for seeds and suckers
- KU4.** Recommended sources for organic propagation material
- KU5.** Organic treatment and storage-related guidelines for propagation materials
- KU6.** Acceptable chemical alternatives for seed treatment, their procurement and use
- KU7.** Various propagation material treatment inputs available for organic farming and their benefits
- KU8.** Method of preparation of organic inputs
- KU9.** Quantity of organic inputs to be applied for propagation material treatment
- KU10.** When to use seeds for propagation
- KU11.** Overall process of propagation through seeds
- KU12.** Primary nursery process
- KU13.** Secondary nursery process
- KU14.** When to use suckers for propagation
- KU15.** Overall process of propagation through suckers
- KU16.** Tools and techniques used for planting suckers
- KU17.** Transplantation process, tools and techniques

MSU/AGR/N0102: Carry out aftercare or maintenance during cultivation of large cardamom

Description

In this OS unit, candidate will learn to control and prevent potential threats to plants, manage soil conditions, promote and maintain healthy growth, prepare irrigation schedule and irrigate the large cardamom plants.

Scope

The scope covers the following :

- Control and prevent potential threats to plants
- Manage soil conditions
- Promote and maintain healthy growth
- Prepare irrigation schedule
- Irrigate the large cardamom plants

Elements and Performance Criteria

Control and prevent potential threats to plants

To be competent, the user/individual on the job must be able to:

- PC1.** Identify potential threats to plant health for a specific agro-climatic zone. (Potential threats: certain types of weeds, pests, diseases, disorders, unfavourable conditions, etc.)
- PC2.** Prepare a pest calendar with all pest characteristics for large cardamom crops in relation to different stages of growth and seasons.
- PC3.** Implement organic preventive techniques which limit the development of weeds, pests and diseases in a balanced nutrient management programme such as water logging, destruction of infected plant debris, pruning, etc.
- PC4.** Check plants for any infestation of weeds, pests, diseases or disorders that adversely impacts production.
- PC5.** Estimate the type of existing infestation, its extent, stage and size.
- PC6.** Control insect-pest and disease incidence at an early controllable stage by applying Integrated Pest Management (IPM) and Integrated Disease Management (IDM)
- PC7.** Manage and prevent viral diseases.

Manage soil conditions

To be competent, the user/individual on the job must be able to:

- PC8.** Monitor top soil's pH value, fertility and density against acceptable levels for the chosen crop
- PC9.** Identify various methods of activating microbial activity in topsoil
- PC10.** Prepare various organic inputs that can increase soil microbial activity
- PC11.** Apply soil-activating inputs effectively
- PC12.** Identify different plant nutritional requirements during the growing cycle and growing conditions, using published data on species, historical records and experience.

Qualification Pack

- PC13.** Identify measures to achieve appropriate soil conditions and nutrient availability for plant growth.
- PC14.** Determine and implement organic soil amendment and management practices.
- PC15.** Estimate organic fertilizer requirement in terms of the type of fertilizer, quantity and quality.
- PC16.** Prepare organic fertilizer as per requirement.
- PC17.** Apply organic fertilizer as per the requirement taking necessary personal and environmental safety measures.
- PC18.** Record the soil health and plant nutrition activities undertaken and their specifications.

Promote and maintain healthy growth

To be competent, the user/individual on the job must be able to:

- PC19.** Implement practices for large cardamom plant health that comply with organic farming, health and safety legislation and codes of practice.
- PC20.** Ensure proper watering of plants, using techniques that minimise wastage and are cost-effective.
- PC21.** Perform adequate mulching to ensure optimum use of water while ensuring it looks good and does not cause a safety hazard.
- PC22.** Ensure adequate light, shade and temperature per the specific plant variety requirement.
- PC23.** Monitor plant growth as per the crop calendar.
- PC24.** Apply revival strategies.
- PC25.** Ensure pollination by bees by growing flowering plants on the plantation throughout the year to maintain a continuous supply of their food.

Prepare irrigation schedule

To be competent, the user/individual on the job must be able to:

- PC26.** Identify characteristics of good irrigation systems.
- PC27.** Ascertain the amount of water required in the flowering and post-flowering phases, germination and maturity phases.
- PC28.** Ascertain the number of days of irrigation required for large cardamom based on the crop stage.
- PC29.** Prepare the irrigation schedule by understanding the water requirement of the plant and its holding capacity.
- PC30.** Interact with micro-irrigation and sprinkler system experts on its purpose, usage and advantages
- PC31.** Incorporate applicable micro-irrigation and sprinkler system techniques using appropriate equipment.

Irrigate the large cardamom plants

To be competent, the user/individual on the job must be able to:

- PC32.** Ensure water supply to the crop at various life cycles (from sowing to the entire life cycle).
- PC33.** Ensure the spread of water in the root zone.
- PC34.** Ensure proper water drainage at all stages.
- PC35.** Identify water stress and disease indicators suggesting too little or too much water and make necessary corrections in the water supply.

Knowledge and Understanding (KU)

Qualification Pack

The individual on the job needs to know and understand:

- KU1.** Basics of plant anatomy, morphology, physiology - photosynthesis, respiration, water relations, transpiration
- KU2.** Pest, disease, disorder and symptom recognition of host stress
- KU3.** Organic preventive techniques to limit, pests and diseases such as water logging, destruction of infected plant debris, pruning, etc.
- KU4.** Integrated Pest Management (IPM) techniques such as pheromone traps, light traps, bird perches, and sticky traps.
- KU5.** Integrated Disease Management (IDM) techniques
- KU6.** Economic, aesthetic or environmental thresholds for a range of plant pests, diseases and disorders
- KU7.** Chemical, biological and cultural methods and treatments acceptable under organic farming regulations
- KU8.** Implications of the choice of plant pest and disease control methods with site limitations, environmental implications, end market and production or environmental objectives for the site
- KU9.** How to recognize signs of damage or threats to plant health and the appropriate method of control
- KU10.** Contamination control measures
- KU11.** How seasonal weather, climate change and soil conditions affect plant growth and health
- KU12.** Signs of damage to leaves, roots, stems, flowers, yield/vigour, by physical means, pest and disease
- KU13.** Identify appropriate prevention and/ or control methods for infestation
- KU14.** Environmental threats like frost, drought, water logging, humidity, heat, light/ shade, chemical spray drift
- KU15.** Importance of planting shady trees and types of trees to be planted
- KU16.** Plant nutrition, growth and development concepts
- KU17.** The various organic and viable sources of nutrients such as vermicompost, farmyard manure, compost crop residues, green manures, oil cakes etc.
- KU18.** Advantages of using organic sources of nutrients
- KU19.** Benefit of inclusion of leguminous green manure crops between the rows of large cardamom to help maintain soil fertility and productivity and reduce weeds
- KU20.** Application of non-synthetic mineral fertilisers and brought-in bio fertilisers (biological origin) as supplementary for nutrient recycling
- KU21.** Prohibited or restricted inputs as per organic farming practices
- KU22.** Nutritional deficiency/ excess indicators
- KU23.** Effects of seasonal weather conditions, effects of soil conditions, soil compaction and different soil types (e.g., clay), reasons for feeding, mulching, irrigation and support of established plantings, and powered and nonpowered maintenance equipment. Increase/ decrease of pest and/ or disease infestations, inappropriate soil
- KU24.** Appropriate pH levels for plants
- KU25.** Methods used to maintain/ control plant growth

Qualification Pack

- KU26.** Range and use of tools, equipment and machinery available to the enterprise for implementing the management measures
- KU27.** Work health and safety responsibilities for employees and employers
- KU28.** Correct use, maintenance and storage of personal protective equipment
- KU29.** Visual plant assessment
- KU30.** Plant health, growth habits, structure, stability and growing environment
- KU31.** Reasons for pruning, the timing of pruning, types of material for removal, including suckers, reverted shoots
- KU32.** Deadheading, dead, damaged, weak or diseased, method of pruning, positioning of cuts
- KU33.** Correct pruning techniques used to ensure required plant growth responses
- KU34.** Season growth, flowering on the previous season growth and those grown for winter stems and summer
- KU35.** Pollination strategies
- KU36.** Importance of pollination using bumble bees
- KU37.** Foliage
- KU38.** Disposal of plant debris in an environmentally aware and sensitive manner
- KU39.** Monitoring and managing of soil pH value, fertility and density against acceptable levels for large cardamom crop remedial actions
- KU40.** Nutritional requirements during the growing cycle and growing conditions
- KU41.** Estimation of farmyard manure, vermicompost, biofertilizer, enriched compost, fermented plant extracts etc. and their application
- KU42.** Estimation of manure, fertilizer, and biopesticides requirement and their application
- KU43.** Records to be kept on soil health and plant nutrition activities
- KU44.** Work health and safety procedures for pruning operations
- KU45.** Water supply requirements for the crop at various life cycles (from sowing to the entire life cycle)
- KU46.** Timing and method of irrigation appropriate for a given soil type & climatic conditions
- KU47.** The amount of water holding capacity in the root zone of the plant
- KU48.** The amount of water required for the plant and its effect on the yield
- KU49.** Frequency of irrigation required at various stages of plant growth
- KU50.** Various types of micro irrigation equipment to be used (mistifiers, drippers, sprinklers, foggers, etc)
- KU51.** Layout and planting for drip irrigation
- KU52.** Water stress and disease indicators suggesting too little or too much water
- KU53.** Importance of moisture measurement tool
- KU54.** Relative advantages and disadvantages of various irrigation equipment

Qualification Pack

Assessment Criteria

Assessment Criteria for Outcomes	Theory Marks	Practical Marks	Project Marks	Viva Marks
<i>Control and prevent potential threats to plants</i>	6	14	-	-
PC1. Identify potential threats to plant health for a specific agro-climatic zone. (Potential threats: certain types of weeds, pests, diseases, disorders, unfavourable conditions, etc.)	-	-	-	-
PC2. Prepare a pest calendar with all pest characteristics for large cardamom crops in relation to different stages of growth and seasons.	-	-	-	-
PC3. Implement organic preventive techniques which limit the development of weeds, pests and diseases in a balanced nutrient management programme such as water logging, destruction of infected plant debris, pruning, etc.	-	-	-	-
PC4. Check plants for any infestation of weeds, pests, diseases or disorders that adversely impacts production.	-	-	-	-
PC5. Estimate the type of existing infestation, its extent, stage and size.	-	-	-	-
PC6. Control insect-pest and disease incidence at an early controllable stage by applying Integrated Pest Management (IPM) and Integrated Disease Management (IDM)	-	-	-	-
PC7. Manage and prevent viral diseases.	-	-	-	-
<i>Manage soil conditions</i>	6	14	-	-
PC8. Monitor top soil's pH value, fertility and density against acceptable levels for the chosen crop	-	-	-	-
PC9. Identify various methods of activating microbial activity in topsoil	-	-	-	-
PC10. Prepare various organic inputs that can increase soil microbial activity	-	-	-	-
PC11. Apply soil-activating inputs effectively	-	-	-	-

Qualification Pack

Assessment Criteria for Outcomes	Theory Marks	Practical Marks	Project Marks	Viva Marks
PC12. Identify different plant nutritional requirements during the growing cycle and growing conditions, using published data on species, historical records and experience.	-	-	-	-
PC13. Identify measures to achieve appropriate soil conditions and nutrient availability for plant growth.	-	-	-	-
PC14. Determine and implement organic soil amendment and management practices.	-	-	-	-
PC15. Estimate organic fertilizer requirement in terms of the type of fertilizer, quantity and quality.	-	-	-	-
PC16. Prepare organic fertilizer as per requirement.	-	-	-	-
PC17. Apply organic fertilizer as per the requirement taking necessary personal and environmental safety measures.	-	-	-	-
PC18. Record the soil health and plant nutrition activities undertaken and their specifications.	-	-	-	-
<i>Promote and maintain healthy growth</i>	6	14	-	-
PC19. Implement practices for large cardamom plant health that comply with organic farming, health and safety legislation and codes of practice.	-	-	-	-
PC20. Ensure proper watering of plants, using techniques that minimise wastage and are cost-effective.	-	-	-	-
PC21. Perform adequate mulching to ensure optimum use of water while ensuring it looks good and does not cause a safety hazard.	-	-	-	-
PC22. Ensure adequate light, shade and temperature per the specific plant variety requirement.	-	-	-	-
PC23. Monitor plant growth as per the crop calendar.	-	-	-	-
PC24. Apply revival strategies.	-	-	-	-

Qualification Pack

Assessment Criteria for Outcomes	Theory Marks	Practical Marks	Project Marks	Viva Marks
PC25. Ensure pollination by bees by growing flowering plants on the plantation throughout the year to maintain a continuous supply of their food.	-	-	-	-
<i>Prepare irrigation schedule</i>	6	14	-	-
PC26. Identify characteristics of good irrigation systems.	-	-	-	-
PC27. Ascertain the amount of water required in the flowering and post-flowering phases, germination and maturity phases.	-	-	-	-
PC28. Ascertain the number of days of irrigation required for large cardamom based on the crop stage.	-	-	-	-
PC29. Prepare the irrigation schedule by understanding the water requirement of the plant and its holding capacity.	-	-	-	-
PC30. Interact with micro-irrigation and sprinkler system experts on its purpose, usage and advantages	-	-	-	-
PC31. Incorporate applicable micro-irrigation and sprinkler system techniques using appropriate equipment.	-	-	-	-
<i>Irrigate the large cardamom plants</i>	6	14	-	-
PC32. Ensure water supply to the crop at various life cycles (from sowing to the entire life cycle).	-	-	-	-
PC33. Ensure the spread of water in the root zone.	-	-	-	-
PC34. Ensure proper water drainage at all stages.	-	-	-	-
PC35. Identify water stress and disease indicators suggesting too little or too much water and make necessary corrections in the water supply.	-	-	-	-
NOS Total	30	70	-	-

MSU/AGR/N0103: Harvest large cardamom produces

Description

In this OS unit, candidate will learn to plan out and carry out harvesting activities.

Scope

The scope covers the following :

- Plan out harvesting activities
- Carry out harvesting activities

Elements and Performance Criteria

Plan out harvesting activities

To be competent, the user/individual on the job must be able to:

- PC1.** Identify the area and produce to be harvested and its quality specifications.
- PC2.** Determine if the capsules are ready for harvest.
- PC3.** Select the produce for harvesting based on various relevant criteria, instructions and targets.
- PC4.** Plan harvesting activities so as to efficiently achieve harvest targets.
- PC5.** Obtain, organise and use the tools, kit and personal protective equipment ensuring cleanliness and safety.
- PC6.** Cut the bearing tillers up to a specified height and leave them for a specified number of days to attain full maturity.

Carry out harvesting activities

To be competent, the user/individual on the job must be able to:

- PC7.** Cut and heap the spikes using the right tools in a safe and efficient manner.
- PC8.** Separate and dry the capsules.
- PC9.** Harvest the produce in an efficient manner as per organisational standards.
- PC10.** Use sorting and segregation techniques during and after harvesting as required.

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** area and quality specifications of the large cardamom to be harvested
- KU2.** cardamom spikes and capsule indicators showing readiness for harvesting
- KU3.** importance of planning harvesting activities
- KU4.** harvesting tools and picking kit, their usage and care
- KU5.** personal safety and hygiene procedures
- KU6.** relevant personal protection equipment
- KU7.** various relevant harvesting criteria for large cardamom

Qualification Pack

- KU8.** harvesting techniques for large cardamom crop
- KU9.** suckers differentiation
- KU10.** importance and techniques of drying the harvested capsules
- KU11.** sorting and segregation techniques

Qualification Pack

MSU/AGR/N0104: Undertake post-harvest activity to enhance profitability

Description

In this OS unit, candidate will learn to process the harvest, organise storage and transportation, market and sell produce through traditional and modern avenues and deal with post-harvest waste.

Scope

The scope covers the following :

- Process the harvest
- Organise storage and transportation
- Market and sell produce through traditional and modern avenues
- Deal with post-harvest waste

Elements and Performance Criteria

Process the harvest

To be competent, the user/individual on the job must be able to:

- PC1.** Cure the capsules to remove the moisture content by indirect heat drying at optimum temperature.
- PC2.** Carry out tail or calyx cutting of the capsules using manual and mechanical methods
- PC3.** Use weighing machines accurately to weigh harvested produce.
- PC4.** Sort the harvested produce based on quality, colour, size and appearance.
- PC5.** Grade the large cardamom pods based on market specifications.
- PC6.** Check for biological infestation on produce and segregate infested produce.
- PC7.** Assess physical injuries on harvested produce.
- PC8.** Perform filling, labelling and temporary storage of produce.
- PC9.** Complete the records required on standard data sheets for production quantity and quality.
- PC10.** Process the segregated produce that does not meet the quality standards per organisational standard procedures or instructions.

Organise for storage and transportation

To be competent, the user/individual on the job must be able to:

- PC11.** Identify the types of packing materials used for large cardamom packing.
- PC12.** Determine the capacity of packaging bags.
- PC13.** Use packing methods and processes to maintain the capsules' quality.
- PC14.** Ensure stacking of packed bags as per recommendations.
- PC15.** Ensure personal hygiene and safety in accordance with guidelines.
- PC16.** Organise safe cost-effective modes of transportation including consolidation of loads and cooperative transportation
- PC17.** Ensure that safe loading, unloading, and stacking of bags/crates in and out of the transport vehicle as per organisational standards.

Qualification Pack

PC18. Confirm the loading capacity of the transport vehicle in accordance with standards and load accordingly.

PC19. Record the materials loaded and unloaded on or from the transport, respectively.

Market and sell produce through traditional and modern avenues

To be competent, the user/individual on the job must be able to:

PC20. Identify the opportunities and process to sell to traditional and modern markets. Traditional: Mandis, Traders, Middlemen Modern: Auctions, Cooperatives, Digital marketing, Online markets, Contract selling, authentic communities and government organised groups of social media, etc.

PC21. Draw out and implement an organic branding and marketing strategy

PC22. Register on authorised online wholesale platforms

PC23. Select selling opportunities for organic produce based on production volumes, market availability, price trends, category/grade of produce, access, etc.

PC24. Prepare quotations and bid documents for sales

PC25. Respond to online and offline queries from vendors seeking a supply of large cardamom

PC26. Identify the risks involved in the sale of farm produce

PC27. Ensure payment risks are covered through planned terms and conditions specified in sales quotations or deals

PC28. Open bank accounts and transact through net banking and UPI

PC29. Comply with relevant regulations in the marketing of the produce

PC30. Track information related to the wholesale and retail prices of the produce

PC31. Record daily sell and purchase of items in designated log books including quantity, quality, date of manufacture and batch number of every produce accurately

Deal with post-harvest waste

To be competent, the user/individual on the job must be able to:

PC32. Organise all organic post-harvest waste to be converted to compost

PC33. Ensure post-harvest plants are nurtured to grow or killed and their residue is left to decompose as per the age and condition of the plant

PC34. Identify and recycle inorganic waste that can be recycled profitably

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

KU1. Quality standards for large cardamom produce in national and international markets

KU2. Traditional and modern curing processes used for large cardamom

KU3. Benefits of modern curing processes such as the use of bhattis with flue pipe curing system using indirect heat drying

KU4. Tail or calyx cutting process and precautions for the cardamom capsules using manual and mechanical methods

KU5. sorting and segregation techniques used during and after harvesting

KU6. Importance of weighing harvested produce, methods and precautions to be taken

KU7. Importance of sorting and grading before selling the produce

Qualification Pack

- KU8.** Sorting criteria for harvested produce such as quality, colour, size, cosmetic look, health, etc.
- KU9.** The five grades of large cardamom based on standardized sieves size
- KU10.** Symptoms, risks and precautions related to biological infestation
- KU11.** Types and impact of various injuries on harvested large cardamom and related processing
- KU12.** Records required for harvest and post-harvest processing
- KU13.** Types and methods of processing of produce not meeting quality standards
- KU14.** Precautions and methods of filling and storage of produce
- KU15.** Storage room conditions such as dry, free from objectionable odours and proofed against the entry of insects with proper ventilation that can be fully closed during wet and rainy days.
- KU16.** Types and use of farm packing materials which does not affect the product but protect it from the ingress of moisture and loss of volatile matter
- KU17.** How to determine the capacity of packaging material
- KU18.** Packing methods and processes
- KU19.** Importance of stacking the polyethene-lined jute bags on wooden crates or platforms
- KU20.** Personal hygiene and safety
- KU21.** Safe and efficient methods for loading and unloading, and stacking bags/crates in and off the transport
- KU22.** Loading capacity of transport vehicles and the importance of adhering to it
- KU23.** Need for the transportation to be protected from rain, from the sun or other sources of excessive heat, from objectionable odours and from any other contamination
- KU24.** Types of packaging, their uses, advantages and disadvantages
- KU25.** Types of transportation, suitability, costs, advantages and disadvantages for various types of produce
- KU26.** Safe and cost-effective ways of transportation including consolidation of loads and cooperative methods
- KU27.** Sources of information for traditional and modern markets and market rates for various produce
- KU28.** Alternative sales channels and strategies
- KU29.** Benefits of having bank accounts and transacting through net banking and UPI
- KU30.** Documentation related to sales processes including detailed specifications, and quality parameters for various types of farm products
- KU31.** Risks and risk mitigation strategies for sales
- KU32.** Types of organic and inorganic post-harvest waste and environment-friendly and profitable ways to deal with them

MSU/AGR/N0105: Undertake managerial activities for profitable and sustainable organic crops management

Description

In this OS unit, candidate will learn to register the farm plan and organise funds, manage farm finances, budgeting and procurement, undertake sustainable organic farming practices and manage staff at the farm.

Scope

The scope covers the following :

- Register the farm plan and organise funds
- Manage farm finances, budgeting and procurement
- Undertake sustainable organic farming practices
- Manage staff at the farm

Elements and Performance Criteria

Register the farm plan and organise funds

To be competent, the user/individual on the job must be able to:

- PC1.** Comply with farm registration requirements
- PC2.** Identify farming goals, resources available and constraints
- PC3.** Develop an organic crop production plan including main crop and intercrop as per the agro-climatic seasons
- PC4.** Develop a comprehensive plan for the season including planting, crop maintenance requirements, mechanization, water supply and irrigation plans
- PC5.** Identify risks and incorporate strategies and controls for the same in the plan
- PC6.** Estimate funding requirements
- PC7.** Collect information related to various subsidies/funds offered by the Government, authorized state units and other financial institutions involved with the promotion of the produce
- PC8.** Apply for funding after identifying the source/scheme for capital expenditure as well as working capital as per the farm plan

Manage farm finances, budgeting and procurement

To be competent, the user/individual on the job must be able to:

- PC9.** Prepare farm budget
- PC10.** Monitor and control finances and expenses
- PC11.** Identify the potential markets for the purchase of farm inputs
- PC12.** Ask for formal quotations from suppliers/ contractors of requested goods/materials/services by providing product/service specifications
- PC13.** Assess the contractor/supplier's ability to provide a consistent level of performance on repeat orders/ jobs and a cost-competitive quality product and/or service in line with organic farming regulations

Qualification Pack

PC14. Maintain basic accounts-related records of expenses and revenues for financial planning and auditing purposes

PC15. Prepare cash flow and profit and loss statement

PC16. Manage risks with respect to farm financing including insurance of crop

Undertake sustainable organic farming practices

To be competent, the user/individual on the job must be able to:

PC17. Comply with organic farm certification requirements and apply for the same

PC18. Adopt energy conservation and waste recycling practices

PC19. Practice elements of zero-budget natural farming

PC20. Adopt sustainable farming practices that can be implemented. Sustainable farming practices: e.g., crop rotation, intercropping, rainwater harvesting, mulching, integrated nutrient management, integrated pest management, integrated disease management, permaculture, vermicomposting, etc.

Manage staff at the farm

To be competent, the user/individual on the job must be able to:

PC21. Carry out recruitment, selection and onboarding responsibilities

PC22. Monitor the work done by staff and provide them with regular performance feedback

PC23. Ensure adherence to relevant labour laws

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

KU1. Relevant legislation and legal requirements for farm protection, use, maintenance and activities

KU2. Government policies for subsidies and support price

KU3. Role of banks on loan facilities and crop insurance

KU4. Buying and selling documentation

KU5. Risk management, its elements and related processes

KU6. Farm-level financial risks and mitigation of risks including

KU7. Basic documentation and basic presentation of financial information

KU8. Importance and meaning of the whole farm plan

KU9. Basic accounting principles and Taxation Laws, including GST

KU10. Organisational requirements for record keeping and auditing including principles and techniques involved in budgeting, cash flows, profit and loss statements

KU11. Documentation related to sales and procurement processes including detailed specifications, and quality parameters for various types of farm products

KU12. Risks and risk mitigation strategies for procurement and sales

KU13. Sources of information for markets and market rates for various produce

KU14. Alternative sales channels and strategies

KU15. Types of packaging, their uses, advantages and disadvantages

KU16. Types of transportation, suitability, costs, advantages and disadvantages for various types of produce

Qualification Pack

- KU17.** Importance and process of checking materials received against buying specifications
- KU18.** Organic farm certification requirements and application process
- KU19.** Energy conservation and waste recycling practices
- KU20.** Zero-budget natural farming tenets and benefits
- KU21.** Sustainable farming practices and their benefits: e.g., crop rotation, intercropping, rainwater harvesting, mulching, integrated nutrient management, integrated pest management, integrated disease management, permaculture, vermicomposting, etc.
- KU22.** Processes for recruitment, induction and onboarding of staff
- KU23.** Staff performance monitoring and training processes
- KU24.** Basic labour laws relevant to agricultural establishments

MSU/AGR/N0106: Maintain health and safety during crops cultivation and processing

Description

In this OS unit, candidate will learn to identify safety hazards and how to manage them, implement and adhere to safety measures, implement and adhere to efficient emergency procedures and maintain good health and hygiene.

Scope

The scope covers the following :

- Identify safety hazards and how to manage them
- Implement and adhere to safety measures
- Implement and adhere to efficient emergency procedures
- Maintain good health and hygiene

Elements and Performance Criteria

Identify safety hazards and how to manage them

To be competent, the user/individual on the job must be able to:

- PC1.** Identify existing and potential hazards and risks in the work area to people, the crop or the crop produce.
- PC2.** Identify safety and security measures to address the hazards and risks identified.
- PC3.** Develop procedures and work instructions for controlling the risks and hazards

Implement and adhere to safety measures

To be competent, the user/individual on the job must be able to:

- PC4.** Implement measures to protect from physical hazards, electrical hazards, fire hazards, hazardous materials, and bio-hazards.
- PC5.** Ensure safe use and maintenance of tools, equipment and machinery used in crop cultivation, harvesting, processing and storage
- PC6.** Select, use and store safety equipment, personal protective equipment and clothing appropriate to the tasks
- PC7.** Prepare and fix relevant safety signs and symbols in the field and processing areas
- PC8.** Implement and adhere to safe manual handling techniques
- PC9.** Implement and adhere to fatigue management techniques
- PC10.** Monitor adherence to various safety measures to prevent accidents and damages
- PC11.** Organise fire drills and other safety-related workshops

Implement and adhere to efficient emergency procedures

To be competent, the user/individual on the job must be able to:

- PC12.** Identify procedures for dealing with accidents, fires and emergencies to ensure loss minimization and personnel and asset protection
- PC13.** Follow emergency procedures as per workplace requirements.

Qualification Pack

PC14. Use emergency equipment in accordance with manufacturers' specifications and workplace requirements.

PC15. Maintain first aid kit

PC16. Administer first aid as and when required.

Maintain good health and hygiene

To be competent, the user/individual on the job must be able to:

PC17. Maintain workplace cleanliness

PC18. Maintain personal cleanliness and hygiene

PC19. Ensure the team is adhering to good cleanliness and hygiene practices

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

KU1. Importance of ensuring health and safety measures for personnel and crop safety and health are implemented and adhered to

KU2. Hazards and hazard identification, including associated risks and controls

KU3. Various risks and hazards at a farm

KU4. Common safety measures at a farm to protect against hazards and risks

KU5. Procedures and documentation for implementing and monitoring health and safety measures

KU6. Functional, operational and maintenance aspects of tools and equipment used in the individual's job role in the forest and wood products industry

KU7. Workplace procedures regarding the use of ppe and clothing for own work activities

KU8. Fatigue management

KU9. Manual handling techniques

KU10. Procedures for recording and reporting workplace information.

KU11. Various types of emergencies in a farm

KU12. Best ways to deal with various types of emergencies

KU13. Procedures for dealing with accidents, fires and emergencies to ensure loss minimization, personnel and asset protection

KU14. Importance of establishing and communicating emergency procedures in advance

KU15. Emergency equipment and their use

KU16. First aid kit

KU17. First aid procedures

KU18. Importance of maintaining workplace and personnel cleanliness and hygiene

KU19. Various measures to be undertaken to implement workplace and personnel cleanliness and hygiene

- PC5.** recognize the significance of 21st Century Skills for employment
- PC6.** practice the 21st Century Skills such as Self-Awareness, Behaviour Skills, time management, critical and adaptive thinking, problem-solving, creative thinking, social and cultural awareness, emotional awareness, learning to learn for continuous learning etc. in personal and professional life

Basic English Skills

To be competent, the user/individual on the job must be able to:

Qualification Pack

- PC7.** use basic English for everyday conversation in different contexts, in person and over the telephone
- PC8.** read and understand routine information, notes, instructions, mails, letters etc. written in English
- PC9.** write short messages, notes, letters, e-mails etc. in English

Career Development & Goal Setting

To be competent, the user/individual on the job must be able to:

- PC10.** understand the difference between job and career
- PC11.** prepare a career development plan with short- and long-term goals, based on aptitude

Communication Skills

To be competent, the user/individual on the job must be able to:

- PC12.** follow verbal and non-verbal communication etiquette and active listening techniques in various settings
- PC13.** work collaboratively with others in a team

Diversity & Inclusion

To be competent, the user/individual on the job must be able to:

- PC14.** communicate and behave appropriately with all genders and PwD
- PC15.** escalate any issues related to sexual harassment at workplace according to POSH Act

Financial and Legal Literacy

To be competent, the user/individual on the job must be able to:

- PC16.** select financial institutions, products and services as per requirement
- PC17.** carry out offline and online financial transactions, safely and securely
- PC18.** identify common components of salary and compute income, expenses, taxes, investments etc
- PC19.** identify relevant rights and laws and use legal aids to fight against legal exploitation

Essential Digital Skills

To be competent, the user/individual on the job must be able to:

- PC20.** operate digital devices and carry out basic internet operations securely and safely
- PC21.** use e- mail and social media platforms and virtual collaboration tools to work effectively
- PC22.** use basic features of word processor, spreadsheets, and presentations

Entrepreneurship

To be competent, the user/individual on the job must be able to:

- PC23.** identify different types of Entrepreneurship and Enterprises and assess opportunities for potential business through research
- PC24.** develop a business plan and a work model, considering the 4Ps of Marketing Product, Price, Place and Promotion
- PC25.** identify sources of funding, anticipate, and mitigate any financial/ legal hurdles for the potential business opportunity

Customer Service

To be competent, the user/individual on the job must be able to:

- PC26.** identify different types of customers
- PC27.** identify and respond to customer requests and needs in a professional manner.

Qualification Pack

PC28. follow appropriate hygiene and grooming standards

Getting ready for apprenticeship & Jobs

To be competent, the user/individual on the job must be able to:

PC29. create a professional Curriculum vitae (Résumé)

PC30. search for suitable jobs using reliable offline and online sources such as Employment exchange, recruitment agencies, newspapers etc. and job portals, respectively

PC31. apply to identified job openings using offline /online methods as per requirement

PC32. answer questions politely, with clarity and confidence, during recruitment and selection

PC33. identify apprenticeship opportunities and register for it as per guidelines and requirements

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

KU1. need for employability skills and different learning and employability related portals

KU2. various constitutional and personal values

KU3. different environmentally sustainable practices and their importance

KU4. Twenty first (21st) century skills and their importance

KU5. how to use English language for effective verbal (face to face and telephonic) and written communication in formal and informal set up

KU6. importance of career development and setting long- and short-term goals

KU7. about effective communication

KU8. POSH Act

KU9. Gender sensitivity and inclusivity

KU10. different types of financial institutes, products, and services

KU11. how to compute income and expenditure

KU12. importance of maintaining safety and security in offline and online financial transactions

KU13. different legal rights and laws

KU14. different types of digital devices and the procedure to operate them safely and securely

KU15. how to create and operate an e- mail account and use applications such as word processors, spreadsheets etc.

KU16. how to identify business opportunities

KU17. types and needs of customers

KU18. how to apply for a job and prepare for an interview

KU19. apprenticeship scheme and the process of registering on apprenticeship portal

Generic Skills (GS)

User/individual on the job needs to know how to:

GS1. read and write different types of documents/instructions/correspondence

GS2. communicate effectively using appropriate language in formal and informal settings

Qualification Pack

- GS3.** behave politely and appropriately with all
- GS4.** how to work in a virtual mode
- GS5.** perform calculations efficiently
- GS6.** solve problems effectively
- GS7.** pay attention to details
- GS8.** manage time efficiently
- GS9.** maintain hygiene and sanitization to avoid infection

Assessment Guidelines and Assessment Weightage

Assessment Guidelines

The Assessment will check the retention of Practical and Theoretical Learning.

In the Practical Assessment the emphasis will be on:

- Observation of skills on the job
- Practical demonstration of skills
- And case-study/scenario-based viva-voce questions

The Theoretical assessment of knowledge required to carry out the Learning outcomes articulated in the qualification will be done through online/offline, proctored assessment papers that will carry:

- Objective-type questions
- Subjective questions

Qualification Pack

● Case study/scenario-based questions

The Practical and Theoretical assessments will be developed by Subject Matter Experts (SME) available with the Assessment Agency as per the performance and assessment criteria mentioned in the Qualification.

The assessment papers will be cross-checked for the various outcome-based parameters such as quality, time taken, precision, tools & equipment requirement etc. The assessment sets will then be reviewed by officials at Medhavi Skills University for consistency. The assessments will be designed to assess the maximum parts during the practical hands-on work. The technical limitations at the training centres will be taken care of in theory and viva. The assessment agencies are instructed to hire assessors with integrity, reliability and fairness. Each assessor shall sign a document with them assessment agency by which they commit themselves to comply with the rules of confidentiality and conflict of interest, independence from commercial and other interests that would compromise the impartiality of the assessments. The assessment agencies are instructed to ideally have assessors with minimum eligibility criteria as specified in the qualification.

Minimum Aggregate Passing % at QP Level : 60

(Please note: Every Trainee should score a minimum aggregate passing percentage as specified above, to successfully clear the Qualification Pack assessment.)

Assessment Weightage

Glossary

Sector	Sector is a conglomeration of different business operations having similar business and interests. It may also be defined as a distinct subset of the economy whose components share similar characteristics and interests.
Sub-sector	Sub-sector is derived from a further breakdown based on the characteristics and interests of its components.
Occupation	Occupation is a set of job roles, which perform similar/ related set of functions in an industry.
Job role	Job role defines a unique set of functions that together form a unique employment opportunity in an organisation.
Occupational Standards (OS)	OS specify the standards of performance an individual must achieve when carrying out a function in the workplace, together with the Knowledge and Understanding (KU) they need to meet that standard consistently. Occupational Standards are applicable both in the Indian and global contexts.
Performance Criteria (PC)	Performance Criteria (PC) are statements that together specify the standard of performance required when carrying out a task.
National Occupational Standards (NOS)	NOS are occupational standards which apply uniquely in the Indian context.
Qualifications Pack (QP)	QP comprises the set of OS, together with the educational, training and other criteria required to perform a job role. A QP is assigned a unique qualifications pack code.
Unit Code	Unit code is a unique identifier for an Occupational Standard, which is denoted by an 'N'
Unit Title	Unit title gives a clear overall statement about what the incumbent should be able to do.
Description	Description gives a short summary of the unit content. This would be helpful to anyone searching on a database to verify that this is the appropriate OS they are looking for.
Scope	Scope is a set of statements specifying the range of variables that an individual may have to deal with in carrying out the function which have a critical impact on quality of performance required.

Qualification Pack

Knowledge and Understanding (KU)	Knowledge and Understanding (KU) are statements which together specify the technical, generic, professional and organisational specific knowledge that an individual needs in order to perform to the required standard.
Organisational Context	Organisational context includes the way the organisation is structured and how it operates, including the extent of operative knowledge managers have of their relevant areas of responsibility.
Technical Knowledge	Technical knowledge is the specific knowledge needed to accomplish specific designated responsibilities.
Core Skills/ Generic Skills (GS)	Core skills or Generic Skills (GS) are a group of skills that are the key to learning and working in today's world. These skills are typically needed in any work environment in today's world. These skills are typically needed in any work environment. In the context of the OS, these include communication related skills that are applicable to most job roles.
Electives	Electives are NOS/set of NOS that are identified by the sector as contributive to specialization in a job role. There may be multiple electives within a QP for each specialized job role. Trainees must select at least one elective for the successful completion of a QP with Electives.
Options	Options are NOS/set of NOS that are identified by the sector as additional skills. There may be multiple options within a QP. It is not mandatory to select any of the options to complete a QP with Options.
