SGJ/Q1802: Solar Cold Storage Entrepreneur

Brief Job Description

Solar Cold Storage Entrepreneur sets up an enterprise with an aim to provide a service (to Farmers/FPOs etc) for storing perishable agricultural and horticultural produce for increasing their shelf life and realise better price of the produce. This entrepreneur shall use an innovative solar based cold storage solution that can also be powered through the Grid and has thermal energy storage for providing backup during non-sunny hours.

Personal Attributes

The individual shall have an ability to take initiative, handle pressure and shall be motivated with good interpersonal and problem solving skills. The individual shall also have leadership skills and organized with their work and act with integrity while performing multiple tasks for the customers with quality and timely deliverables.

Applicable National Occupational Standards (NOS)

Compulsory NOS:

1. [SGJ/N1802: Introduction to Solar cold storage system and the evolving business opportunities it offers](#)
2. [SGJ/N1804: Elements of Solar Cold Storage system](#)
3. [SGJ/N1805: Survey site and discuss prerequisites for installation of Solar Cold Storage system](#)
4. [SGJ/N1806: Assess lifecycle cost for installing Solar cold storage system](#)
5. [SGJ/N1807: Key technical and entrepreneurial aspects for supporting growth and business development in solar cold storage](#)
6. [SGJ/N1809: Oversee the Assembly, Installation and O&M of Solar cold storage System](#)
7. [SGJ/N1808: Discuss various case studies showcasing best practices in system installation, working and business models of solar cold storage system](#)
8. [SGJ/N0801: Maintain Health and Safety at Solar cold storage project site](#)
9. [DGT/VSQ/N0102: Employability Skills \(60 Hours\)](#)

SGJ/N1802: Introduction to Solar cold storage system and the evolving business opportunities it offers

Description

This unit provides an overview of solar cold storage system, the skills required to start and operate an enterprise along with the business opportunities in solar cold storage space.

Scope

The scope covers the following :

- Introduction to solar cold storage system
- Evolving business opportunities

Elements and Performance Criteria

Introduction to Solar cold storage system

To be competent, the user/individual on the job must be able to:

- PC1.** Discuss solar energy and its various applications, including in solar cold storage system.
- PC2.** Discuss the requirement for storing agricultural/horticultural produce by farmers/Farmers producers' organisations (FPOs), etc at farm/Mandi level.
- PC3.** Discuss how cold storage solutions are useful for storing various agricultural/horticultural produce to extend their shelf life and so useful for enhancing the incomes of farmers/entrepreneurs/ other users, etc.
- PC4.** Discuss the overall concept of solar cold storage system illustrate its schematic and explain the main functions of main components
- PC5.** Briefly explain the prospects, process, and practice of solar/ cold storage system in India
- PC6.** Discuss key drivers, sectoral- trends, market potential and overall business opportunities it offers
- PC7.** Discuss advantages of solar cold storage and identify its usage for storing a range of produce by various users
- PC8.** Discuss the importance of this job role and the basic skills, knowledge and responsibility of an entrepreneur in cold storage market space
- PC9.** Discuss the enabling environment including key policy and regulatory provisions both at centre and states level, key schemes, standards and guidelines etc which are critical to accelerate the adoption of solar cold storage system.
- PC10.** Illustrate the significance of solar energy and its applications across various technologies including in solar cold storage system.
- PC11.** Illustrate schematic of solar cold storage system and explain the functions of all key components
- PC12.** Show how to analyse key drivers, sectoral trends, market potential and overall business opportunities solar cold storage business offers
- PC13.** Demonstrate how solar cold storage solutions are useful for storing and extending the shelf life of agricultural and horticultural produce

Qualification Pack

- PC14.** Outline the advantages of solar cold storage system and show how it can be useful for entrepreneurs/farmers/ FPOs/ other users etc.
- PC15.** Show how concerned policy and regulatory provisions along with guidelines, standards etc both at centre and states levels are critical to accelerate the adoption of solar cold storage system

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** The concept of the entire technology system
- KU2.** Concept of the technology enabled business enterprise
- KU3.** Preliminary concepts of solar PV system
- KU4.** Characteristics, functions & specifications of all key components of the system as per manufacturer's manual/ other sources
- KU5.** must be well versed with the procurement, product assembling and installation timeline and other requirements
- KU6.** O&M procedures for various equipment and component
- KU7.** the maintenance schedule for all key components along with solar PV system
- KU8.** tools used in system installation and maintenance

Generic Skills (GS)

User/individual on the job needs to know how to:

- GS1.** complete documentation work applicable to the role
- GS2.** communicate effectively and express statements to all stakeholders with required clarity
- GS3.** suitably create and follow organisational code of conduct
- GS4.** read and correctly interpret various instructions and codes, as per standard electrical, mechanical and civil nomenclature
- GS5.** read and write in vernacular/English language
- GS6.** read health and safety instructions and signage
- GS7.** work constructively and collaboratively with others
- GS8.** make timely decisions for efficient utilization of resources

SGJ/N1804: Elements of Solar Cold Storage system

Description

This unit specifies the functions of all the key elements and components of a solar cold storage system

Scope

The scope covers the following :

- Functions of the key components of a solar cold storage system

Elements and Performance Criteria

Functions of the key components of a solar cold storage system

To be competent, the user/individual on the job must be able to:

- PC1.** Explain the detailed prospects, concept and practice of utilisation of solar cold storage system in India
- PC2.** Discuss how to perform planning for installation of solar cold storage solution.
- PC3.** Discuss how “plug and play” modular, solar-powered cold room is designed for 24/7 storage, and how it addresses the problem of post- harvest losses.
- PC4.** Discuss key information on storage/ cooling requirements for different types of produce including expected shelf life, temperature range, humidity etc
- PC5.** Discuss key elements of solar cold storage system, and analyse the characteristics and specifications of those including Solar PV system, Refrigeration system, Insulation type/Thermal Energy Storage system, Remote monitoring system, etc.
- PC6.** Discuss how to ensure regular supply of various produce from farmers and accordingly how to manage the demand from markets.
- PC7.** Demonstrate the functions of all key components of the solar cold storage system and showcase its successful operation for storing a range of agricultural/horticultural produce
- PC8.** Show how linkages from both supply (e.g. farmers) and demand side (e.g. market) have to be created to ensure the utilisation of solar cold storage system and subsequent viability of such business
- PC9.** Show how parameters/info like shelf life, temperature requirement etc are relevant for storing various produce
- PC10.** • Analyse various specifications of the key components of solar cold storage system, including Solar PV system, Refrigeration system, Insulation type/Thermal Energy Storage system, Remote monitoring system, etc.

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** mechanical and electrical features necessary for the long life of the PV system under a wide range of operating conditions

Qualification Pack

- KU2.** mechanical and electrical features necessary for the long life of all other system components under a wide range of operating conditions
- KU3.** organisational culture and customer support policy
- KU4.** product warranty document of each component of the solar PV system along with the entire cold storage system
- KU5.** efficiency, cost and typical specifications along with functioning and operating principle of different components of the system
- KU6.** general terminologies associated with solar cold storage solutions

Generic Skills (GS)

User/individual on the job needs to know how to:

- GS1.** read English and/or vernacular language
- GS2.** read and correctly interpret manuals, product data sheet, health and safety instructions, memos, and other such documents
- GS3.** follow organizational rule-based decision making process
- GS4.** read and correctly interpret various codes, as per standard electrical, mechanical and civil nomenclature
- GS5.** express statements or information clearly so that others can hear and understand
- GS6.** participate in and understand the main points of simple discussions
- GS7.** respond appropriately to any queries by customers and other stakeholders

SGJ/N1805: Survey site and discuss prerequisites for installation of Solar Cold Storage system

Description

The unit outlines all key functions to be performed for undertaking site survey and implementing all activities for installation of solar cold storage system

Scope

The scope covers the following :

- Analysing various parameters for solar cold storage system installation

Elements and Performance Criteria

Survey site and discuss prerequisites for installation of Solar Cold Storage system

To be competent, the user/individual on the job must be able to:

- PC1.** Discuss various parameters for system installation and explain how to identify a suitable location where solar cold storage system shall be installed.
- PC2.** Discuss how to analyse key information (e.g. quantity/type of produce, distance from mandi etc) for identifying the sites for installation of solar cold storage solution.
- PC3.** Discuss how to assess the potential and demand for solar cold storage solution.
- PC4.** Discuss all key aspects of a Detailed Project Report (DPR) and explain/show how to develop a bankable DPR for installing solar cold storage solutions.
- PC5.** Illustrate and Analyse various parameters for siting the location for installing solar cold storage system.
- PC6.** Show how to access required data and analyse key info for performing site survey for installing solar cold storage
- PC7.** Demonstrate how to perform calculations for estimating demand/potential for solar cold storage in a given area
- PC8.** Illustrate all key aspects of a Detailed Project Report (DPR) and show how to develop a bankable DPR for installing solar cold storage solutions

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** company's installation, customer support and other relevant policy
- KU2.** company's reporting structure
- KU3.** general terminologies associated with solar power plant and solar cold storage system
- KU4.** simple calculations to derive the power and energy received from solar radiation in a given area
- KU5.** simple calculations to derive the load demand
- KU6.** mechanical and electrical features necessary for the long life of the solar cold storage unit

Qualification Pack

- KU7.** efficiency, cost , typical specifications and functioning of different solar cold storage system components
- KU8.** reporting protocol and documentation required

Generic Skills (GS)

User/individual on the job needs to know how to:

- GS1.** read vernacular/English language
- GS2.** read and understand manuals, health and safety instructions, guidelines memos, other company documents
- GS3.** read and correctly interpret information from different sources- books, screens in machines and signage
- GS4.** identify and recognize problems and search for appropriate solutions
- GS5.** apply domain knowledge and choose best methods to complete assigned tasks
- GS6.** develop and follow code of conduct
- GS7.** manage relationships with customers with intent on satisfying requirements of service delivery

SGJ/N1806: Assess lifecycle cost for installing Solar cold storage system

Description

The unit outlines on how to estimate the life cycle cost for solar cold storage system installation.

Scope

The scope covers the following :

- Cost parameters of solar cold storage system

Elements and Performance Criteria

Cost parameters of solar cold storage system

To be competent, the user/individual on the job must be able to:

- PC1.** Discuss and analyse how to identify cost parameters for various solar cold storage system components, as per site conditions.
- PC2.** Explain and show how system installation and overall project cost may vary depending upon various factors like the site conditions and related requirements.
- PC3.** Discuss how to estimate lifecycle cost for solar cold storage installation and its utilisation
- PC4.** Discuss any incentive/subsidy available and process for availing that for setting up solar cold storage system in a given location
- PC5.** Discuss O&M related cost for maintaining the system
- PC6.** Discuss various parameters for calculating lifecycle cost of solar cold storage system, along with cash flow, annual savings, payback period, IRR etc and how to include those in the detailed project report (DPR)
- PC7.** Discuss how various community or FPO owned solar cold storage system/business models can be more economic and useful
- PC8.** Show how to analyse various cost parameters for solar cold storage system components, as per site conditions.
- PC9.** Demonstrate how system installation cost can vary depending upon the site conditions and related requirements
- PC10.** Show how O&M related cost for maintaining the system can be calculated
- PC11.** Show how available incentives/subsidy etc can be availed for setting up solar cold storage system
- PC12.** Show how to Calculate lifecycle cost of solar cold storage installation along with its business viability including cash flow, annual savings and payback period
- PC13.** Illustrate how various community or FPO owned solar cold storage system/business models can be more economic and useful

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

Qualification Pack

- KU1.** knowledge of all the technical and cost parameters and interpretation of specification sheets of different commercially available components
- KU2.** efficiency, cost and typical specifications, functioning and operating principle of different components
- KU3.** mechanical and electrical features necessary for optimum system operation
- KU4.** project budgeting, prepare costing and performing cost benefit analysis for project including Life cycle cost of energy (LCOE), payback, IRR etc.
- KU5.** business models for solar cold storage operation
- KU6.** definition of the general terminology used by the industry
- KU7.** Financial concepts for availing low cost capital
- KU8.** availing available central and /or state subsidy

Generic Skills (GS)

User/individual on the job needs to know how to:

- GS1.** prepare and maintain documentation
- GS2.** read vernacular/english language
- GS3.** read and understand system manuals, health and safety instructions, memos, other such documents
- GS4.** express statements or information clearly with all stakeholders so that others can hear and understand

SGJ/N1807: Key technical and entrepreneurial aspects for supporting growth and business development in solar cold storage

Description

This unit outlines key attributes related to technical and entrepreneurship aspects for supporting the creation and successful operation of a solar cold storage based enterprise

Scope

The scope covers the following :

- Technical Aspects for supporting business growth and development
- Entrepreneurial Aspects for supporting business growth and development

Elements and Performance Criteria

Technical Aspects for supporting business growth and development

To be competent, the user/individual on the job must be able to:

- PC1.** Discuss key technical aspects of system components design and specifications including of Solar PV system; Refrigeration system; insulation type/Thermal Energy Storage system; Remote monitoring system, etc
- PC2.** Discuss schematic and wiring diagrams along with Check list for O&M including preventive maintenance and routine check up and system monitoring, as provided in the product manual by the manufacturer.
- PC3.** Explain the concept and significance of entrepreneurship and the rapidly growing entrepreneurship ecosystem in the country.
- PC4.** Discuss the process for setting up a new business venture including the required registration
- PC5.** Identify the key ingredients of a business plan/proposal and discuss how to develop that
- PC6.** Explain fixed and working capital requirements for an enterprise
- PC7.** Discuss how to apply loan from various financial institutions for setting up an enterprise
- PC8.** Discuss how to prepare an effective presentation for marketing and business development
- PC9.** Identify the challenges and risks for new entrepreneurs and the possible mitigation measures
- PC10.** Discuss business development opportunities across various customer types
- PC11.** Discuss various business risks for setting up an enterprise in solar cold storage space
- PC12.** State the relevant government programs and schemes for setting up enterprises
- PC13.** Discuss various compliances and other regulatory requirements for creating and running enterprises
- PC14.** Discuss how to inculcate good etiquettes, develop good communication/soft skills and manners for effective communicating with the client.
- PC15.** Show how to analyse system components design and specifications.
- PC16.** Demonstrate how to choose design and technical criteria of solar cold storage

Qualification Pack

- PC17.** Show how to analyse the basic schematic and wiring diagrams and ensure checklist for system usage, O&M and monitoring as per the technical manual provided by the manufacturer/developer.
- PC18.** Demonstrate the process for setting up an enterprise in solar cold storage space
- PC19.** Demonstrate how to develop an effective business plan/proposal
- PC20.** Show how to get support from various Government schemes for setting up and running successful businesses
- PC21.** Show how to avail low -cost financing from various financial institutions/Government schemes etc and perform financial analysis like estimating payback, cashflow etc
- PC22.** Show how to manage business risks for an enterprise in solar cold storage space
- PC23.** Show how to effectively support business development activities
- PC24.** Show how to meet various compliances and other regulatory requirements for creating and running enterprises
- PC25.** Demonstrate how to prepare effective brochure/ frequently asked questions to support outreach with customers.
- PC26.** Demonstrate how to set up a bank account and manage financial accounting work including digital payments.
- PC27.** Demonstrate the process of maintaining various work-related records electronically using the computer
- PC28.** Show how to maintain the required quality standards in work to ensure successful business operation
- PC29.** Show the appropriate techniques for effective listening and speaking to effectively communicate with customers and other stakeholders.

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** government/corporate policies and guidelines on solar cold storage installation and operation
- KU2.** concerned legislative, organizational, site requirements and related procedures
- KU3.** typical specifications, functioning, operating principle and efficiencies of different components of a solar cold storage system
- KU4.** mechanical and electrical features necessary for the successful operation of system
- KU5.** different types of tools and tackles used for system installation and operation
- KU6.** manufacturer's warranty policy
- KU7.** dos and don'ts of material handling and storage

Generic Skills (GS)

User/individual on the job needs to know how to:

- GS1.** understand various guidelines as per standard electrical, mechanical and civil nomenclature
- GS2.** take decision with systematic course of actions and/or response.
- GS3.** to clearly communicate installation, O&M and related instructions to team.

Qualification Pack

- GS4.** planning and organization of work to meet deadlines
- GS5.** choose best methods to complete assigned tasks.
- GS6.** apply domain knowledge, observations and data to select course of action to perform tasks related to solar cold storage system business space
- GS7.** organize and document various folders as required for project management

Qualification Pack

PC9. Identify the challenges and risks for new entrepreneurs and the possible mitigation measures	3	-	-	-
PC10. Discuss business development opportunities across various customer types	1	-	-	-
PC11. Discuss various business risks for setting up an enterprise in solar cold storage space	2	-	-	-
PC12. State the relevant government programs and schemes for setting up enterprises	2	-	-	-

Qualification Pack

Assessment Criteria for Outcomes	Theory Marks	Practical Marks	Project Marks	Viva Marks
PC13. Discuss various compliances and other regulatory requirements for creating and running enterprises	1	-	-	-
PC14. Discuss how to inculcate good etiquettes, develop good communication/soft skills and manners for effective communicating with the client.	1	-	-	-
PC15. Show how to analyse system components design and specifications.	-	1	-	-
PC16. Demonstrate how to choose design and technical criteria of solar cold storage	-	1	-	-
PC17. Show how to analyse the basic schematic and wiring diagrams and ensure checklist for system usage, O&M and monitoring as per the technical manual provided by the manufacturer/developer.	-	1	-	-
PC18. Demonstrate the process for setting up an enterprise in solar cold storage space	-	1	-	-
PC19. Demonstrate how to develop an effective business plan/proposal	-	1	-	-
PC20. Show how to get support from various Government schemes for setting up and running successful businesses	-	2	-	-
PC21. Show how to avail low -cost financing from various financial institutions/Government schemes etc and perform financial analysis like estimating payback, cashflow etc	-	2	-	-
PC22. Show how to manage business risks for an enterprise in solar cold storage space	-	2	-	-
PC23. Show how to effectively support business development activities	-	2	-	-
PC24. Show how to meet various compliances and other regulatory requirements for creating and running enterprises	-	2	-	-
PC25. Demonstrate how to prepare effective brochure/ frequently asked questions to support outreach with customers.	-	2	-	-

Qualification Pack

Assessment Criteria for Outcomes	Theory Marks	Practical Marks	Project Marks	Viva Marks
PC26. Demonstrate how to set up a bank account and manage financial accounting work including digital payments.	-	2	-	-
PC27. Demonstrate the process of maintaining various work-related records electronically using the computer	-	1	-	-
PC28. Show how to maintain the required quality standards in work to ensure successful business operation	-	1	-	-
PC29. Show the appropriate techniques for effective listening and speaking to effectively communicate with customers and other stakeholders.	-	1	-	-

SGJ/N1809: Oversee the Assembly, Installation and O&M of Solar cold storage System

Description

This unit outlines how to oversee the assembly, installation and O&M of solar cold storage system across site locations.

Scope

The scope covers the following :

- Overseeing the process of solar cold storage system set up

Elements and Performance Criteria

Overseeing the process of solar cold storage system set up

To be competent, the user/individual on the job must be able to:

- PC1.** Discuss key step by step process to oversee various stages of solar cold storage assembly, installation, usage Operations & Maintenance (O&M) and system monitoring; including of Solar PV system; Thermal storage system; Modular solar cold storage system , etc
- PC2.** Discuss basic steps in design and fabrication of system components
- PC3.** Discuss how to effectively meet the cooling requirement during the evening hours by the thermal backup system.
- PC4.** Demonstrate how to oversee the step by step process of components assembly, system installation, overall O&M and monitoring, including of Solar PV system; Thermal storage system; Modular solar cold storage system , etc
- PC5.** Illustrate basic steps in design and fabrication of system components
- PC6.** Show how the solar cold storage can meet cooling requirement during the evening hours by the thermal backup system

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** document information using appropriate corporate forms
- KU2.** legislative, organizational, site requirements and procedures for installation of solar cold storage system
- KU3.** mechanical and electrical features necessary for the long life of the solar cold storage system under a wide range of operating conditions
- KU4.** various parameters associated with electrical safety and grid infrastructure requirements

Generic Skills (GS)

User/individual on the job needs to know how to:

Qualification Pack

- GS1.** interpret manuals on health and safety instructions, memos, other company documents
- GS2.** organize and document various folders required in project management
- GS3.** work constructively and collaboratively with others
- GS4.** read and interpret data from various sources
- GS5.** follow organization rule-based decision making process

SGJ/N1808: Discuss various case studies showcasing best practices in system installation, working and business models of solar cold storage system

Description

This unit outlines the best practices in solar cold storage system installation along with concerned business models

Scope

The scope covers the following :

- Incorporate best practices to manage the installation and operations of solar cold storage units.

Elements and Performance Criteria

case studies showcasing best practices in system installation, working and business models of solar cold storage system

To be competent, the user/individual on the job must be able to:

- PC1.** Discuss successful solar cold storage experience for various consumer segment/locations etc.
- PC2.** Identify opportunities for incorporating best practices in system installation and its usage.
- PC3.** Discuss various business models applicable for solar cold storage market including leasing, Storage as a service etc, their drivers and challenges to identify the best suitable model for the business.
- PC4.** Demonstrate best practices of solar cold storage installation and usage.
- PC5.** Show how to adopt key learnings from successful case studies/ experiences.
- PC6.** Show which business model is best suitable for a given market condition.

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** policy, regulations and procedures for installing a solar cold storage unit
- KU2.** analysing business models, prepare costing and cost benefit analysis
- KU3.** definition of the general terminology used by the solar cold storage/solar and related industry
- KU4.** efficiency, cost and typical specifications, functioning and operating principle of different components of solar cold storage system
- KU5.** document information using appropriate corporate forms

Generic Skills (GS)

User/individual on the job needs to know how to:

- GS1.** prepare and maintain required documentation.

Qualification Pack

- GS2.** read and correctly interpret information from different sources including books, manuals, signage
- GS3.** communicate with team members and respond appropriately to any queries
- GS4.** plan and organize work schedule to meet deadlines
- GS5.** critically evaluate information obtained from customers and workers to perform day to day activities
- GS6.** communicate with all stakeholders including customers to understand market
- GS7.** take decision with systematic course of actions and/or response

SGJ/N0801: Maintain Health and Safety at Solar cold storage project site

Description

This unit outlines how to ensure health and safety measures at sold storage project site

Scope

The scope covers the following :

- Ensuring Health and Safety

Elements and Performance Criteria

Ensuring Health and Safety

To be competent, the user/individual on the job must be able to:

- PC1.** Explain the requirement and importance of ensuring personal cleanliness and hygiene.
- PC2.** Identify steps to be followed to maintain personal cleanliness while working at the project site
- PC3.** Explain the requirements for a safe work area/project site
- PC4.** Identify proper personal health and safety tools including gloves and masks
- PC5.** Identify the risks and hazards associated with solar cold storage system installations and O&M (e.g. fire, electric shocks etc)
- PC6.** Explain standard operating procedures of ensuring safety for installation of Solar cold storage solution in accordance with industry practice
- PC7.** Explain how to identify the first aid materials and administer first-aid
- PC8.** Explain how to report immediately to concerned authorities regarding sign and symptoms of illness/accidents etc
- PC9.** Discuss specified norms for waste collection and segregation for all waste categories as applicable.
- PC10.** Demonstrate how to ensure personal cleanliness and hygiene while working at project site
- PC11.** Demonstrate standard operating procedures of safety for installation of solar cold storage system in accordance with industry practice
- PC12.** Demonstrate the proper use of Gloves and Masks and other PPE
- PC13.** Demonstrate good housekeeping practices and infection control guidelines
- PC14.** Show how to mitigate the risks and hazards associated with solar cold storage system installations and O&M (e.g. fire, electric shocks etc)
- PC15.** Demonstrate how to identify the location of first aid materials and administer first-aid
- PC16.** Demonstrate safety operating procedures for installation of Solar cold storage solution
- PC17.** Demonstrate how to follow processes specified for disposal of hazardous waste, if any

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

Qualification Pack

- KU1.** importance of safety drills
- KU2.** importance of working in a clean and safe environment
- KU3.** organisational health and safety guidelines
- KU4.** roles and responsibilities of relevant personnel within and outside the organization
- KU5.** importance of Personal Protective Equipment required for specific job
- KU6.** waste categories and their disposal
- KU7.** housekeeping activities relevant to task
- KU8.** key internal and external source of health and safety information
- KU9.** symptoms of infection like fever, cough, swelling and inflammation
- KU10.** providing basic first aid

Generic Skills (GS)

User/individual on the job needs to know how to:

- GS1.** complete statutory documents relevant to safety and hygiene
- GS2.** interpret general safety guidelines, labels, charts and signage
- GS3.** fill safety forms and related documentation
- GS4.** communicate and collaborate with others to incorporate safety and sustainable practices
- GS5.** interpret general safety guidelines, labels, charts and signage

DGT/VSQ/N0102: Employability Skills (60 Hours)

Description

This unit is about employability skills, Constitutional values, becoming a professional in the 21st Century, digital, financial, and legal literacy, diversity and Inclusion, English and communication skills, customer service, entrepreneurship, and apprenticeship, getting ready for jobs and career development.

Scope

The scope covers the following :

- Introduction to Employability Skills
- Constitutional values - Citizenship
- Becoming a Professional in the 21st Century
- Basic English Skills
- Career Development & Goal Setting
- Communication Skills
- Diversity & Inclusion
- Financial and Legal Literacy
- Essential Digital Skills
- Entrepreneurship
- Customer Service
- Getting ready for Apprenticeship & Jobs

Elements and Performance Criteria

Introduction to Employability Skills

To be competent, the user/individual on the job must be able to:

- PC1.** identify employability skills required for jobs in various industries
- PC2.** identify and explore learning and employability portals

Constitutional values – Citizenship

To be competent, the user/individual on the job must be able to:

- PC3.** recognize the significance of constitutional values, including civic rights and duties, citizenship, responsibility towards society etc. and personal values and ethics such as honesty, integrity, caring and respecting others, etc.
- PC4.** follow environmentally sustainable practices

Becoming a Professional in the 21st Century

To be competent, the user/individual on the job must be able to:

- PC5.** recognize the significance of 21st Century Skills for employment
- PC6.** practice the 21st Century Skills such as Self-Awareness, Behaviour Skills, time management, critical and adaptive thinking, problem-solving, creative thinking, social and cultural awareness, emotional awareness, learning to learn for continuous learning etc. in personal and professional life

Basic English Skills

To be competent, the user/individual on the job must be able to:

Qualification Pack

- PC7.** use basic English for everyday conversation in different contexts, in person and over the telephone
- PC8.** read and understand routine information, notes, instructions, mails, letters etc. written in English
- PC9.** write short messages, notes, letters, e-mails etc. in English

Career Development & Goal Setting

To be competent, the user/individual on the job must be able to:

- PC10.** understand the difference between job and career
- PC11.** prepare a career development plan with short- and long-term goals, based on aptitude

Communication Skills

To be competent, the user/individual on the job must be able to:

- PC12.** follow verbal and non-verbal communication etiquette and active listening techniques in various settings
- PC13.** work collaboratively with others in a team

Diversity & Inclusion

To be competent, the user/individual on the job must be able to:

- PC14.** communicate and behave appropriately with all genders and PwD
- PC15.** escalate any issues related to sexual harassment at workplace according to POSH Act

Financial and Legal Literacy

To be competent, the user/individual on the job must be able to:

- PC16.** select financial institutions, products and services as per requirement
- PC17.** carry out offline and online financial transactions, safely and securely
- PC18.** identify common components of salary and compute income, expenses, taxes, investments etc
- PC19.** identify relevant rights and laws and use legal aids to fight against legal exploitation

Essential Digital Skills

To be competent, the user/individual on the job must be able to:

- PC20.** operate digital devices and carry out basic internet operations securely and safely
- PC21.** use e-mail and social media platforms and virtual collaboration tools to work effectively
- PC22.** use basic features of word processor, spreadsheets, and presentations

Entrepreneurship

To be competent, the user/individual on the job must be able to:

- PC23.** identify different types of Entrepreneurship and Enterprises and assess opportunities for potential business through research
- PC24.** develop a business plan and a work model, considering the 4Ps of Marketing Product, Price, Place and Promotion
- PC25.** identify sources of funding, anticipate, and mitigate any financial/ legal hurdles for the potential business opportunity

Customer Service

To be competent, the user/individual on the job must be able to:

- PC26.** identify different types of customers
- PC27.** identify and respond to customer requests and needs in a professional manner.

Qualification Pack

PC28. follow appropriate hygiene and grooming standards

Getting ready for apprenticeship & Jobs

To be competent, the user/individual on the job must be able to:

PC29. create a professional Curriculum vitae (Résumé)

PC30. search for suitable jobs using reliable offline and online sources such as Employment exchange, recruitment agencies, newspapers etc. and job portals, respectively

PC31. apply to identified job openings using offline /online methods as per requirement

PC32. answer questions politely, with clarity and confidence, during recruitment and selection

PC33. identify apprenticeship opportunities and register for it as per guidelines and requirements

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

KU1. need for employability skills and different learning and employability related portals

KU2. various constitutional and personal values

KU3. different environmentally sustainable practices and their importance

KU4. Twenty first (21st) century skills and their importance

KU5. how to use English language for effective verbal (face to face and telephonic) and written communication in formal and informal set up

KU6. importance of career development and setting long- and short-term goals

KU7. about effective communication

KU8. POSH Act

KU9. Gender sensitivity and inclusivity

KU10. different types of financial institutes, products, and services

KU11. how to compute income and expenditure

KU12. importance of maintaining safety and security in offline and online financial transactions

KU13. different legal rights and laws

KU14. different types of digital devices and the procedure to operate them safely and securely

KU15. how to create and operate an e- mail account and use applications such as word processors, spreadsheets etc.

KU16. how to identify business opportunities

KU17. types and needs of customers

KU18. how to apply for a job and prepare for an interview

KU19. apprenticeship scheme and the process of registering on apprenticeship portal

Generic Skills (GS)

User/individual on the job needs to know how to:

GS1. read and write different types of documents/instructions/correspondence

GS2. communicate effectively using appropriate language in formal and informal settings

Qualification Pack

- GS3.** behave politely and appropriately with all
- GS4.** how to work in a virtual mode
- GS5.** perform calculations efficiently
- GS6.** solve problems effectively
- GS7.** pay attention to details
- GS8.** manage time efficiently
- GS9.** maintain hygiene and sanitization to avoid infection

Assessment Guidelines and Assessment Weightage

Assessment Guidelines

1. Criteria for assessment for each Qualification will be created by the Sector Skill Council. Each Element/ Performance Criteria (PC) will be assigned marks proportional to its importance in NOS. SSC will also lay down proportion of marks for Theory and Skills Practical for each Element/ PC.
2. The assessment for the theory part will be based on knowledge bank of questions created by the SSC.
3. Assessment will be conducted for all compulsory NOS, and where applicable, on the selected elective/option NOS/set of NOS.
4. Individual assessment agencies will create unique question papers for theory part for each candidate at each examination/training center (as per assessment criteria below).
5. Individual assessment, every trainee should score the Recommended Pass % aggregate for the Qualification.
7. In case of unsuccessful completion, the trainee may seek reassessment on the Qualification.

Minimum Aggregate Passing % at QP Level : 70

Qualification Pack

(Please note: Every Trainee should score a minimum aggregate passing percentage as specified above, to successfully clear the Qualification Pack assessment.)

Glossary

Sector	Sector is a conglomeration of different business operations having similar business and interests. It may also be defined as a distinct subset of the economy whose components share similar characteristics and interests.
Sub-sector	Sub-sector is derived from a further breakdown based on the characteristics and interests of its components.
Occupation	Occupation is a set of job roles, which perform similar/ related set of functions in an industry.
Job role	Job role defines a unique set of functions that together form a unique employment opportunity in an organisation.
Occupational Standards (OS)	OS specify the standards of performance an individual must achieve when carrying out a function in the workplace, together with the Knowledge and Understanding (KU) they need to meet that standard consistently. Occupational Standards are applicable both in the Indian and global contexts.
Performance Criteria (PC)	Performance Criteria (PC) are statements that together specify the standard of performance required when carrying out a task.
National Occupational Standards (NOS)	NOS are occupational standards which apply uniquely in the Indian context.
Qualifications Pack (QP)	QP comprises the set of OS, together with the educational, training and other criteria required to perform a job role. A QP is assigned a unique qualifications pack code.
Unit Code	Unit code is a unique identifier for an Occupational Standard, which is denoted by an 'N'
Unit Title	Unit title gives a clear overall statement about what the incumbent should be able to do.
Description	Description gives a short summary of the unit content. This would be helpful to anyone searching on a database to verify that this is the appropriate OS they are looking for.
Scope	Scope is a set of statements specifying the range of variables that an individual may have to deal with in carrying out the function which have a critical impact on quality of performance required.

Qualification Pack

Knowledge and Understanding (KU)	Knowledge and Understanding (KU) are statements which together specify the technical, generic, professional and organisational specific knowledge that an individual needs in order to perform to the required standard.
Organisational Context	Organisational context includes the way the organisation is structured and how it operates, including the extent of operative knowledge managers have of their relevant areas of responsibility.
Technical Knowledge	Technical knowledge is the specific knowledge needed to accomplish specific designated responsibilities.
Core Skills/ Generic Skills (GS)	Core skills or Generic Skills (GS) are a group of skills that are the key to learning and working in today's world. These skills are typically needed in any work environment in today's world. These skills are typically needed in any work environment. In the context of the OS, these include communication related skills that are applicable to most job roles.
Electives	Electives are NOS/set of NOS that are identified by the sector as contributive to specialization in a job role. There may be multiple electives within a QP for each specialized job role. Trainees must select at least one elective for the successful completion of a QP with Electives.
Options	Options are NOS/set of NOS that are identified by the sector as additional skills. There may be multiple options within a QP. It is not mandatory to select any of the options to complete a QP with Options.
