SGJ/Q4001: Junior Technician- Solar EV charging station

Brief Job Description

Junior Technician- Solar EV charging station performs tasks while ensuring safety, quality and good workmanship for installation, usage along with O and M of solar powered Electric Vehicle (EV) charging station as per standard industry practices. He/She may also conduct site surveys and evaluate various parameters to decide the suitability of site for the installation of solar powered EV charging station. Also, the individual performs the regular maintenance for Solar powered charging station.

Personal Attributes

This job requires the individual to be diligent, organised, punctual, attentive and accountable to complete the installation along with O&M work at solar based EV charging site in a safe and timely manner. The individual must also demonstrate strong work ethics, good communication skills and should have an ability to properly follow the instructions of supervisor.

Applicable National Occupational Standards (NOS)

Compulsory NOS:

1. [SGJ/N4001: Site feasibility for installation of solar EV charging station](#)
2. [SGJ/N4002: Installation of Solar Powered EV charging station](#)
3. [SGJ/N4003: Testing and commissioning of Solar EV charging station](#)
4. [SGJ/N4004: Operation and Maintenance of Solar EV charging station](#)
5. [SGJ/N4005: Maintain Personal Health and Safety at Solar EV charging project site](#)
6. [DGT/VSQ/N0101: Employability Skills \(30 Hours\)](#)

Qualification Pack

SGJ/N4001: Site feasibility for installation of solar EV charging station

Description

This NOS covers the basics of solar EV charging stations, their key components, and site feasibility assessment through site surveys as per relevant guidelines.

Scope

The scope covers the following :

- Basics of solar powered EV charging station and evolving opportunities
- Key elements of Solar EV charging station system
- Perform Site survey and discuss key pre-requisites for Solar EV charging station installation as per concerned guidelines

Elements and Performance Criteria

Basics of solar powered EV charging station and evolving opportunities

To be competent, the user/individual on the job must be able to:

- PC1.** Discuss and identify need of solar based EV charging station
- PC2.** Explain the concept of EV charging system
- PC3.** Explain types of EV charging system and its functionality
- PC4.** Explain categories of electric vehicles, chargers, charging technologies and different batteries types
- PC5.** Discuss all the components of EV charging station
- PC6.** Discuss all the components of Solar powered EV charging station and their functions
- PC7.** Discuss the advantage and disadvantage of different types of EV charger
- PC8.** Discuss basic skills, knowledge and responsibility of a solar powered EV charging Junior Technician
- PC9.** Discuss the need and importance of solar based EV charging station and highlight the evolving jobs opportunities.
- PC10.** Identify all the components of EV charging station and demonstrate their functions.
- PC11.** Show all the components of Solar powered EV charging station and identify their functions
- PC12.** Illustrate various categories of electric vehicles, chargers, charging technologies and different batteries types.
- PC13.** Illustrate basic skills, knowledge and responsibility of a solar powered EV charging station Junior technician

Elements of solar powered EV Charging Station

To be competent, the user/individual on the job must be able to:

- PC14.** Discuss the detailed prospects, concept and practice of utilisation of solar based EV charging system in India.

Qualification Pack

- PC15.** Discuss in brief- EV and charging technologies, Types of chargers, types of battery and classification, battery packs assembly, charging/discharging cycles, C rating, State of Charge/State of Health, functions of battery charging protection and management system etc.
- PC16.** Discuss how to estimate the load demand and accordingly size the capacity of solar power plant for a suitable EV charging station
- PC17.** Discuss solar power plant components and its installation and O&M for effective operation.
- PC18.** Discuss inverter, Motor, Drivetrain, Regenerative Breaking etc
- PC19.** Discuss key aspects of health and safety for setting up and manage solar based EV charging station
- PC20.** Discuss how services like Battery Swapping is critical to EV charging business
- PC21.** Outline the detailed prospects, concepts and practice of utilisation of solar based EV charging system in India.
- PC22.** Demonstrate the functions of all key components of the solar based EV charging system including Chargers, Battery packs, Battery management system, Motor, Drivetrain
- PC23.** Show how to estimate the sizing of solar plant based on the demand for charging EV.
- PC24.** Show the installation and commissioning of solar power plant for application in EV charging.
- PC25.** Show how solar plant with or without battery can be effectively integrated with conventional grid based system for charging EVs
- PC26.** Show how battery swapping also offers more opportunities for EV charging business.
- PC27.** Show how to identify ways to optimize usage of electricity/energy in various tasks/activities/processes

Site Survey and key pre-requisites for Solar EV charging station installation as per concerned guidelines

To be competent, the user/individual on the job must be able to:

- PC28.** Discuss how to analyse key information like unshaded area requirement, location, insolation etc to identify a suitable site for solar EV charging station installation.
- PC29.** Discuss the various parameters that has influence on location analysis of a solar EV Charging Station
- PC30.** Discuss the key considerations for planning the sequence of performing site feasibility analysis.
- PC31.** Discuss how to interpret effect of Site Selection and Shadow on Solar PV Module Output
- PC32.** Discuss the tools requirement for site feasibility.
- PC33.** Discuss how to Identify the Suitable Location of components like Inverter, Junction Boxes etc.
- PC34.** Explain the importance of pre- installation checks and procedures and how those activities are carried out.
- PC35.** List the tools, materials and equipment used for installing the solar powered EV charging station.
- PC36.** Show how to perform site feasibility assessment including analysing required data and key info for a suitable site selection for installing solar EV charging station.
- PC37.** Show how to identify basic tools and their usage.
- PC38.** Illustrate Do's and Dont's of tools handling
- PC39.** Show how to employ practice of inspecting the site for meeting all key requirements for the installation of solar EV charging station.

Qualification Pack

PC40. Show how pre-installation checks and procedures for installation of solar powered EV charging station are carried out.

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** Need and importance of solar-based EV charging stations
- KU2.** Basic concept and working of EV charging systems
- KU3.** Types of EV chargers and their functionality.
- KU4.** Categories of electric vehicles and charging technologies.
- KU5.** Types of EV batteries and their characteristics.
- KU6.** Components of EV charging stations and their functions.
- KU7.** Components of solar-powered EV charging systems.
- KU8.** Role and working of solar PV plant and its major components.
- KU9.** Function of Battery Management System (BMS).
- KU10.** Advantages and limitations of different EV chargers.
- KU11.** Basics of inverter, motor, drivetrain and regenerative braking.
- KU12.** Charging cycles, C-rating, State of Charge (SoC) and State of Health (SoH).
- KU13.** Methods for estimating load demand for EV charging.
- KU14.** Basic sizing concept of solar power plant for EV charging stations.
- KU15.** Integration of solar power with grid-based EV charging systems.
- KU16.** Concept and opportunities of battery swapping in EV charging.
- KU17.** Roles, responsibilities and skills of a solar EV charging technician.
- KU18.** Key health and safety practices for EV charging station setup.
- KU19.** Key parameters for site selection and feasibility analysis.
- KU20.** Importance of unshaded area, location and solar insolation.

Generic Skills (GS)

User/individual on the job needs to know how to:

- GS1.** Ability to identify the need for solar-based EV charging stations.
- GS2.** Ability to explain the concept and working of EV charging systems.
- GS3.** Ability to identify different types of EV chargers and their functions.
- GS4.** Ability to identify categories of electric vehicles, batteries and charging technologies.
- GS5.** Ability to recognize key components of EV and solar-powered EV charging stations.
- GS6.** Ability to demonstrate functions of solar EV charging system components.
- GS7.** Ability to estimate load demand for EV charging stations
- GS8.** Ability to assist in sizing solar power plants based on charging demand.
- GS9.** Ability to perform basic site feasibility assessment for solar EV charging stations
- GS10.** Ability to analyze site parameters such as location, shading and solar insolation.

Qualification Pack

- GS11.** Ability to identify suitable locations for system components (inverter, junction box, etc.).
- GS12.** Ability to use basic tools and equipment required for installation and inspection.
- GS13.** Ability to follow pre-installation checks and procedures.
- GS14.** Ability to apply health and safety practices during installation and operation.
- GS15.** Ability to optimize energy usage and support efficient EV charging operations.

Qualification Pack

SGJ/N4002: Installation of Solar Powered EV charging station

Description

This NOS covers the installation of solar power plant components and key EV charging station components required for setting up a solar-powered EV charging system.

Scope

The scope covers the following :

- Installation of solar plant and key EV charging station components for setting up a solar-powered EV charging system.

Elements and Performance Criteria

Installation of Solar Plant and its components for EV Charging station

To be competent, the user/individual on the job must be able to:

- PC1.** Discuss key technical details including specifications and system design for both Grid, and Solar charging EV station
- PC2.** Explain how to Install the major components are: Solar MMS, Solar Module, Solar Inverter, Energy Meter, Electrical Interconnection
- PC3.** Explain the process of installing the mounting structure along with structural supports and accessories for safe & weatherproof installation as per site conditions
- PC4.** Identify and describe various tools & tackles used for civil/mechanical installation.
- PC5.** Identify opportunities for material and energy conservation, along with use of environmentally friendly materials in civil/mechanical installation
- PC6.** Describe the process of installing the electrical components including inverter, batteries, junction boxes, energy meters, cables
- PC7.** Explain the Do's and Don'ts of DC wiring
- PC8.** Identify tools & tackles used for cable and conduit installation
- PC9.** Describe the importance of Earthing for the protection of solar PV system
- PC10.**
 - Describe the importance of conducting testing of all solar PV components and performing fault finding and analysis, continuity checks, polarity check and
 - other commissioning activities.
- PC11.** Explain the concerned regulations & standards for grid interconnection
- PC12.** Describe the commissioning process for the solar PV system.
- PC13.** Outline key technical details including specifications and system design criteria for both Grid, and Solar charging EV station
- PC14.** Demonstrate how to use various tools and tackles including for concerned electrical and civil/mechanical installation
- PC15.** Demonstrate how to install electrical components of solar PV system; including inverter, batteries, junction boxes, energy meters, cables and conduits other electrical components
- PC16.** Analyse how to perform DC wiring
- PC17.** Demonstrate the application of tools & tackles used for cable and conduit installation.

Qualification Pack

PC18. Demonstrate how to perform earthing for the protection of solar PV system

Installation of key components of EV charging station.

To be competent, the user/individual on the job must be able to:

PC19. Explain the permit requirement to setup the EV charging Station

PC20. Discuss the relevant standards and guidelines applicable to the EV charging station installation.

PC21. State all the key elements of installation and commissioning of EV charging stations.

PC22. Discuss the key considerations for planning the sequence of operations.

PC23. Explain the pre-installation checklist and procedures to be carried out.

PC24. List the tools, materials and equipment used for installing the charging station.

PC25. Explain the importance of components Specifications and how to assess those for meeting system performance requirement

PC26. Explain the various types of protection to be provided to the charging such as weather protection, protection against voltage fluctuations, safety tests etc.

PC27. Discuss appropriate protocol for EV charging, such as Combined Charging System (CCS), GB/T, CHAdeMO (CHArge de Move), AC & DC /Slow & Fast Charging etc.

PC28. Explain how to analyse the EV charging machine for desired functionalities and perform concerned functions as per manufacturer's specifications

PC29. Demonstrate how to employ proper procedure of connections from the electrical facility to the charging installation site.

PC30. Demonstrate the installation of earth protection system and AC/DC power modules in the EV charging station in line with relevant standards and guidelines

PC31. Demonstrate the process of installing conduits for carrying electrical wires, cables from nearest source/facility to the charging station

PC32. Show how to assign markings on civil foundation for charging station erection after taking measurements

PC33. Demonstrate the fixing of the EV machine on the civil foundation while ensuring a firm grip.

PC34. Show how to use appropriate tools and equipment such as drilling machine, screwdriver, wrench, various types of mounting and insertion tools etc. as per the type of task to be performed pertaining to EV charging station installation

PC35. Demonstrate the use of appropriate protocol for EV charging, such as Combined Charging System (CCS), GB/T, CHAdeMO (CHArge de Move), AC Charging etc.

PC36. Show how to analyse the EV charging machine for desired functionalities and perform concerned functions as per manufacturer's specifications

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

KU1. government/corporate policies and guidelines on: workplace safety, identification and mitigation of safety hazards, work procedures and guidelines

KU2. legislative, organizational, site requirements and procedures for system installation

KU3. tools and tackles required for system installation

KU4. effect on array output of current and voltage based on multiple factors

Qualification Pack

- KU5.** basic functioning and operation of different types of mechanical and electrical components of a solar plus grid based EV charging system
- KU6.** installation work on a solar power system in accordance with relevant standards and regulations

Generic Skills (GS)

User/individual on the job needs to know how to:

- GS1.** complete documentation work applicable to the role
- GS2.** read English and/or vernacular language
- GS3.** read and understand manuals, health and safety instructions, memos, other documents related to system installation and O&M
- GS4.** read from different sources- books screens in machines and signage
- GS5.** read various color codes, as per standard electrical, mechanical and civil nomenclature
- GS6.** express statements or information clearly so that others can hear and understand

SGJ/N4003: Testing and commissioning of Solar EV charging station

Description

This unit outlines all activities which are to be performed for testing and commissioning of a solar based EV charging station.

Scope

The scope covers the following :

- Testing and commissioning of Solar EV Charger and BESS system

Elements and Performance Criteria

Testing and commissioning of Solar EV Charger and BESS system

To be competent, the user/individual on the job must be able to:

- PC1.** List the various types of tests that are performed to test the EV charging station.
- PC2.** Explain the process to be followed to conduct various types of tests pertaining to the commissioning of an EV charging station.
- PC3.** State the key considerations to check the electrical connections for the charging station
- PC4.** Elaborate the technique for measurement of the voltage drop between various parts of the charging station
- PC5.** Explain the procedure to perform Ingress Protection (IP) testing
- PC6.** Discuss relevant IS and IEC standards to perform IP testing
- PC7.** Describe the start-up procedures performed for the charging station
- PC8.** State the importance of running the equipment at recommended initial settings.
- PC9.** State the importance of conducting a trial run of the EV charging station.
- PC10.** Explain the procedure to rectify faults and equipment malfunction pertaining to the commissioning of the charging station
- PC11.** Describe the need for modifications in the existing systems and installed devices
- PC12.** State the importance of the installation and commissioning certificate in the work process
- PC13.** Explain the importance of ensuring that the site is cleared of all (electrical)
- PC14.** Describe the importance of conducting testing of all solar PV components and performing fault finding and analysis, continuity checks, polarity check and other commissioning activities
- PC15.** Explain the concerned regulations & standards for grid interconnection
- PC16.** Describe the commissioning process for the solar PV system
- PC17.** Perform earthing tests in accordance with industry rules and regulations and standard work practices.
- PC18.** Test the connections of the conductive parts with the supply voltage source as per standard practice
- PC19.** Conduct tests to check for electrical continuity between exposed conductive parts and the earth circuit.

Qualification Pack

- PC20.** Demonstrate how to measure the voltage drop between the exposed conductive part and the earthing terminal of the charging station
- PC21.** Demonstrate how to measure earth resistance, the voltage drop between any exposed conductive part and the earth-circuit connections
- PC22.** Demonstrate how to Evaluate the charging capabilities of the station by testing the communication protocol to as per desired standards.
- PC23.** Demonstrate how to deal with equipment malfunction and rectify faults during the commissioning process.
- PC24.** Employ the process of modifying the existing systems and installing electrical devices as per requirements and test results
- PC25.** Demonstrate the process to document backups, manuals, logs, etc. as per work requirements
- PC26.** Demonstrate how to perform testing of all components, along with fault finding & analysis, continuity checks, polarity check and other commissioning activities.
- PC27.** Examine concerned regulations & standards for grid interconnection.
- PC28.** Demonstrate the commissioning process for the Solar PV System

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** tools and tackles required for system installation, testing and commissioning
- KU2.** legislative, organizational, site requirements along with system testing and commissioning procedures
- KU3.** how to work in varying weather conditions while meeting various environmental requirements
- KU4.** isolation procedures and diagnostic/fault finding techniques
- KU5.** basic functioning and operation of different types of electrical and mechanical components of solar based EV charging system
- KU6.** do's and don'ts of system installation, testing and commissioning

Generic Skills (GS)

User/individual on the job needs to know how to:

- GS1.** prepare and maintain proper documentation
- GS2.** respond appropriately to any queries and meet customers requirement on system installation
- GS3.** follow code of conduct
- GS4.** understand the various color codes, as per standard electrical, mechanical and civil nomenclature.
- GS5.** apply domain knowledge, observations and data to select course of action to perform tasks
- GS6.** complete documentation work applicable to the role

Assessment Criteria

Assessment Criteria for Outcomes	Theory Marks	Practical Marks	Project Marks	Viva Marks
<i>Testing and commissioning of Solar EV Charger and BESS system</i>	25	25	-	-
PC1. List the various types of tests that are performed to test the EV charging station.	2	-	-	-
PC2. Explain the process to be followed to conduct various types of tests pertaining to the commissioning of an EV charging station.	2	-	-	-
PC3. State the key considerations to check the electrical connections for the charging station	2	-	-	-
PC4. Elaborate the technique for measurement of the voltage drop between various parts of the charging station	2	-	-	-
PC5. Explain the procedure to perform Ingress Protection (IP) testing	2	-	-	-
PC6. Discuss relevant IS and IEC standards to perform IP testing	1	-	-	-
PC7. Describe the start-up procedures performed for the charging station	1	-	-	-
PC8. State the importance of running the equipment at recommended initial settings.	1	-	-	-
PC9. State the importance of conducting a trial run of the EV charging station.	1	-	-	-
PC10. Explain the procedure to rectify faults and equipment malfunction pertaining to the commissioning of the charging station	1	-	-	-
PC11. Describe the need for modifications in the existing systems and installed devices	2	-	-	-
PC12. State the importance of the installation and commissioning certificate in the work process	2	-	-	-
PC13. Explain the importance of ensuring that the site is cleared of all (electrical)	2	-	-	-

Qualification Pack

Assessment Criteria for Outcomes	Theory Marks	Practical Marks	Project Marks	Viva Marks
PC14. Describe the importance of conducting testing of all solar PV components and performing fault finding and analysis, continuity checks, polarity check and other commissioning activities	2	-	-	-
PC15. Explain the concerned regulations & standards for grid interconnection	1	-	-	-
PC16. Describe the commissioning process for the solar PV system	1	-	-	-
PC17. Perform earthing tests in accordance with industry rules and regulations and standard work practices.	-	2	-	-
PC18. Test the connections of the conductive parts with the supply voltage source as per standard practice	-	2	-	-
PC19. Conduct tests to check for electrical continuity between exposed conductive parts and the earth circuit.	-	3	-	-
PC20. Demonstrate how to measure the voltage drop between the exposed conductive part and the earthing terminal of the charging station	-	2	-	-
PC21. Demonstrate how to measure earth resistance, the voltage drop between any exposed conductive part and the earth-circuit connections	-	2	-	-
PC22. Demonstrate how to Evaluate the charging capabilities of the station by testing the communication protocol to as per desired standards.	-	3	-	-
PC23. Demonstrate how to deal with equipment malfunction and rectify faults during the commissioning process.	-	3	-	-
PC24. Employ the process of modifying the existing systems and installing electrical devices as per requirements and test results	-	2	-	-
PC25. Demonstrate the process to document backups, manuals, logs, etc. as per work requirements	-	2	-	-

Qualification Pack

Assessment Criteria for Outcomes	Theory Marks	Practical Marks	Project Marks	Viva Marks
PC26. Demonstrate how to perform testing of all components, along with fault finding & analysis, continuity checks, polarity check and other commissioning activities.	-	1	-	-
PC27. Examine concerned regulations & standards for grid interconnection.	-	2	-	-
PC28. Demonstrate the commissioning process for the Solar PV System	-	1	-	-
NOS Total	25	25	-	-

SGJ/N4004: Operation and Maintenance of Solar EV charging station

Description

This unit captures key aspects related to performing O&M activities along with monitoring of solar based EV charging system

Scope

The scope covers the following :

- Perform Operation & Maintenance along with system monitoring of Solar integrated EV charging station

Elements and Performance Criteria

Perform Operation & Maintenance along with Monitoring of Solar integrated EV charging station

To be competent, the user/individual on the job must be able to:

- PC1.** Discuss how to perform various activities for operation and maintenance (O&M) of the Solar powered Charging stations.
- PC2.** Discuss and show how to Check the physical condition of the Charger
- PC3.** Discuss how to observe for the over- heating during the normal charging operation.
- PC4.** Explain and show how preventive maintenance of Solar Powered Charging station is carried out.
- PC5.** Demonstrate how various maintenance activities are to be performed to ensure smooth operation of the Solar integrated EV charging station.
- PC6.** Show how to observe for the overheating during charging and and perform preventive maintenance activities of Solar Powered Charging station.

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** legislative, organizational, site requirements and related procedures.
- KU2.** Single Line Diagram, Civil / Mechanical drawings, Electrical drawings and how to read and interpret a Bill of Material for a rooftop solar PV power plant
- KU3.** preparation of preventive maintenance schedule for different components
- KU4.** tools to be utilised in performing system operation and maintenance
- KU5.** knowledge of waste segregation categories

Generic Skills (GS)

User/individual on the job needs to know how to:

- GS1.** prepare and maintain proper documentation.

Qualification Pack

- GS2.** ability to read and correctly interpret information from different sources including books, screens, and signage.
- GS3.** • understand the various color codes, as per standard electrical, mechanical and civil
• nomenclature and industry practice
- GS4.** clearly communicate installation and design instructions to team.
- GS5.** clearly communicate customers' requirements and concerns.
- GS6.** respond timely and appropriately to customers' queries.
- GS7.** communicate the constraints and quality requirements to team.

SGJ/N4005: Maintain Personal Health and Safety at Solar EV charging project site

Description

This unit outlines the personal, health and safety requirements for performing concerned work at Solar EV charging project sites

Scope

The scope covers the following :

- Maintain Personal Health and Safety at Solar EV charging station

Elements and Performance Criteria

Maintain Personal Health and Safety at Solar EV charging station

To be competent, the user/individual on the job must be able to:

- PC1.** Explain the requirement and importance of ensuring personal cleanliness and hygiene
- PC2.** Identify steps to be followed to maintain personal cleanliness while working at the project site
- PC3.** Explain the requirements for a safe work area/project site
- PC4.** Identify proper personal health and safety tools including gloves and masks
- PC5.** Identify the risks and hazards associated with solar powered EV charging system installations and their O&M (e.g. fire, electric shocks etc)
- PC6.** Explain standard operating procedures of ensuring safety for installation of Solar powered EV charging system in accordance with industry practice
- PC7.** Explain how to identify the first aid materials and administer first-aid.
- PC8.** Explain how to report immediately to concerned authorities regarding sign and symptoms of illness/accidents etc
- PC9.** Discuss specified norms for waste collection and segregation for all waste categories as applicable
- PC10.** Demonstrate how to ensure personal cleanliness and hygiene while working at project site
- PC11.** Demonstrate standard operating procedures of safety for installation of solar powered EV charging system in accordance with industry practice
- PC12.** Demonstrate the proper use of Gloves and Masks and other PPE
- PC13.** Demonstrate good housekeeping practices and infection control guidelines.
- PC14.** Show how to mitigate the risks and hazards associated with solar powered EV charging system installations and O&M (e.g. fire, electric shocks etc)
- PC15.** Demonstrate how to identify the location of first aid materials and administer first-aid.
- PC16.** Demonstrate safety operating procedures for installation of solar powered EV charging system
- PC17.** Demonstrate how to follow processes specified for disposal of hazardous waste, if any.

Qualification Pack

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** importance of conducting safety drills and working in safe environment
- KU2.** record data on waste generation and disposal at workplace
- KU3.** complete statutory documents relevant to maintaining safety and hygiene
- KU4.** fill safety formats for near miss, unsafe condition
- KU5.** identify potential safety risk and accordingly report to appropriate authority
- KU6.** communicate and collaborate with others to incorporate sustainable practices
- KU7.** interpret general safety guidelines, labels, charts and signage

Generic Skills (GS)

User/individual on the job needs to know how to:

- GS1.** present information particularly on Health and safety aspects in a logical and organized way
- GS2.** correctly interpret manuals on health and safety, concerned instructions, memos, other company documents
- GS3.** read and interpret data from various sources
- GS4.** take decision with systematic course of actions and/or response
- GS5.** plan to manage time and equipment utilisation effectively
- GS6.** use reasoning skills to identify and resolve basic problems

Qualification Pack

DGT/VSQ/N0101: Employability Skills (30 Hours)

Description

This unit is about employability skills, Constitutional values, becoming a professional in the 21st Century, digital, financial, and legal literacy, diversity and Inclusion, English and communication skills, customer service, entrepreneurship, and apprenticeship, getting ready for jobs and career development.

Scope

The scope covers the following :

- Introduction to Employability Skills
- Constitutional values - Citizenship
- Becoming a Professional in the 21st Century
- Basic English Skills
- Communication Skills
- Diversity & Inclusion
- Financial and Legal Literacy
- Essential Digital Skills
- Entrepreneurship
- Customer Service
- Getting ready for Apprenticeship & Jobs

Elements and Performance Criteria

Introduction to Employability Skills

To be competent, the user/individual on the job must be able to:

PC1. understand the significance of employability skills in meeting the job requirements

Constitutional values – Citizenship

To be competent, the user/individual on the job must be able to:

PC2. identify constitutional values, civic rights, duties, personal values and ethics and environmentally sustainable practices

Becoming a Professional in the 21st Century

To be competent, the user/individual on the job must be able to:

PC3. explain 21st Century Skills such as Self-Awareness, Behavior Skills, Positive attitude, self-motivation, problem-solving, creative thinking, time management, social and cultural awareness, emotional awareness, continuous learning mindset etc.

Basic English Skills

To be competent, the user/individual on the job must be able to:

PC4. speak with others using some basic English phrases or sentences

Communication Skills

To be competent, the user/individual on the job must be able to:

PC5. follow good manners while communicating with others

PC6. work with others in a team

Qualification Pack

Diversity & Inclusion

To be competent, the user/individual on the job must be able to:

PC7. communicate and behave appropriately with all genders and PwD

PC8. report any issues related to sexual harassment

Financial and Legal Literacy

To be competent, the user/individual on the job must be able to:

PC9. use various financial products and services safely and securely

PC10. calculate income, expenses, savings etc.

PC11. approach the concerned authorities for any exploitation as per legal rights and laws

Essential Digital Skills

To be competent, the user/individual on the job must be able to:

PC12. operate digital devices and use its features and applications securely and safely

PC13. use internet and social media platforms securely and safely

Entrepreneurship

To be competent, the user/individual on the job must be able to:

PC14. identify and assess opportunities for potential business

PC15. identify sources for arranging money and associated financial and legal challenges

Customer Service

To be competent, the user/individual on the job must be able to:

PC16. identify different types of customers

PC17. identify customer needs and address them appropriately

PC18. follow appropriate hygiene and grooming standards

Getting ready for apprenticeship & Jobs

To be competent, the user/individual on the job must be able to:

PC19. create a basic biodata

PC20. search for suitable jobs and apply

PC21. identify and register apprenticeship opportunities as per requirement

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

KU1. need for employability skills

KU2. various constitutional and personal values

KU3. different environmentally sustainable practices and their importance

KU4. Twenty first (21st) century skills and their importance

KU5. how to use basic spoken English language

KU6. Do and dont of effective communication

KU7. inclusivity and its importance

KU8. different types of disabilities and appropriate communication and behaviour towards PwD

KU9. different types of financial products and services

Qualification Pack

- KU10.** how to compute income and expenses
- KU11.** importance of maintaining safety and security in financial transactions
- KU12.** different legal rights and laws
- KU13.** how to operate digital devices and applications safely and securely
- KU14.** ways to identify business opportunities
- KU15.** types of customers and their needs
- KU16.** how to apply for a job and prepare for an interview
- KU17.** apprenticeship scheme and the process of registering on apprenticeship portal

Generic Skills (GS)

User/individual on the job needs to know how to:

- GS1.** communicate effectively using appropriate language
- GS2.** behave politely and appropriately with all
- GS3.** perform basic calculations
- GS4.** solve problems effectively
- GS5.** be careful and attentive at work
- GS6.** use time effectively
- GS7.** maintain hygiene and sanitisation to avoid infection

Assessment Guidelines and Assessment Weightage

Assessment Guidelines

1. Criteria for assessment for each Qualification will be created by the Sector Skill Council/Awarding Body. Each Element/ Performance Criteria (PC) will be assigned marks proportional to its importance in NOS.SSC/AB will also lay down proportion of marks for Theory and Skills Practical for each Element/ PC.
2. The assessment for the theory part will be based on knowledge bank of questions created by the SSC/AB.
3. Assessment will be conducted for all compulsory NOS, and where applicable, on the selected elective/option NOS/set of NOS.
4. Individual assessment agencies will create unique question papers for theory part for each candidate at each examination/training center (as per assessment criteria below).
5. Individual assessment agencies will create unique evaluations for skill practical for every student at each examination/ training center based on these criteria.
6. To pass the assessment, every trainee should score the Recommended Pass % aggregate for the Qualification.

Qualification Pack

7. In case of unsuccessful completion, the trainee may seek reassessment on the Qualification.

Minimum Aggregate Passing % at QP Level : 70

(**Please note:** Every Trainee should score a minimum aggregate passing percentage as specified above, to successfully clear the Qualification Pack assessment.)

Assessment Weightage

Compulsory NOS

Glossary

Sector	Sector is a conglomeration of different business operations having similar business and interests. It may also be defined as a distinct subset of the economy whose components share similar characteristics and interests.
Sub-sector	Sub-sector is derived from a further breakdown based on the characteristics and interests of its components.
Occupation	Occupation is a set of job roles, which perform similar/ related set of functions in an industry.
Job role	Job role defines a unique set of functions that together form a unique employment opportunity in an organisation.
Occupational Standards (OS)	OS specify the standards of performance an individual must achieve when carrying out a function in the workplace, together with the Knowledge and Understanding (KU) they need to meet that standard consistently. Occupational Standards are applicable both in the Indian and global contexts.
Performance Criteria (PC)	Performance Criteria (PC) are statements that together specify the standard of performance required when carrying out a task.
National Occupational Standards (NOS)	NOS are occupational standards which apply uniquely in the Indian context.
Qualifications Pack (QP)	QP comprises the set of OS, together with the educational, training and other criteria required to perform a job role. A QP is assigned a unique qualifications pack code.
Unit Code	Unit code is a unique identifier for an Occupational Standard, which is denoted by an 'N'
Unit Title	Unit title gives a clear overall statement about what the incumbent should be able to do.
Description	Description gives a short summary of the unit content. This would be helpful to anyone searching on a database to verify that this is the appropriate OS they are looking for.
Scope	Scope is a set of statements specifying the range of variables that an individual may have to deal with in carrying out the function which have a critical impact on quality of performance required.

Qualification Pack

Knowledge and Understanding (KU)	Knowledge and Understanding (KU) are statements which together specify the technical, generic, professional and organisational specific knowledge that an individual needs in order to perform to the required standard.
Organisational Context	Organisational context includes the way the organisation is structured and how it operates, including the extent of operative knowledge managers have of their relevant areas of responsibility.
Technical Knowledge	Technical knowledge is the specific knowledge needed to accomplish specific designated responsibilities.
Core Skills/ Generic Skills (GS)	Core skills or Generic Skills (GS) are a group of skills that are the key to learning and working in today's world. These skills are typically needed in any work environment in today's world. These skills are typically needed in any work environment. In the context of the OS, these include communication related skills that are applicable to most job roles.
Electives	Electives are NOS/set of NOS that are identified by the sector as contributive to specialization in a job role. There may be multiple electives within a QP for each specialized job role. Trainees must select at least one elective for the successful completion of a QP with Electives.
Options	Options are NOS/set of NOS that are identified by the sector as additional skills. There may be multiple options within a QP. It is not mandatory to select any of the options to complete a QP with Options.
