SSC/Q8404: User Experience Designer

Brief Job Description

A User Experience (UX) Designer is responsible for creating intuitive, user-centric digital experiences. This role involves developing UX design guidelines and best practices, crafting style guides, and establishing design systems for developers. UX Designers conduct business analysis, create user personas, and perform competitive analyses to understand user needs and market positioning. They plan solutions through sitemaps, information architecture, user experience maps, and user flows. The role includes designing detailed wireframes, visual screens, and interface assets such as imagery and animations. UX Designers also conduct usability testing throughout the design stages to ensure a seamless and engaging user experience that aligns with customer requirements.

Personal Attributes

Individuals in this role must work independently and collaborate with various stakeholders involved in the development of Web or Mobile based solution to develop engaging user interfaces and interface designs. They must lead team members and manage team performance to achieve project success. success.

Applicable National Occupational Standards (NOS)

Compulsory NOS:

1. [SSC/N8453: Develop User Experience \(UX\) design guidelines and best practices](#)
2. [SSC/N8420: Design and define style guide/ design system and specifications for developers](#)
3. [SSC/N8454: Conduct Business Analysis and Develop User-Centric Use Cases](#)
4. [SSC/N8422: Conduct a competitive analysis on strength and weakness of competitors products](#)
5. [SSC/N8423: Create user personas to encapsulate and communicate user behaviour patterns](#)
6. [SSC/N8424: Develop sitemap and information architecture for the solution planned for the customer](#)
7. [SSC/N8425: Develop user experience maps, user journeys and user flows](#)
8. [SSC/N8426: Develop detailed wireframes to illustrate flow, interactions and interface elements](#)
9. [SSC/N8427: Develop a visual design/screens for the proposed wireframe](#)
10. [SSC/N8428: Design the assets such as imagery, graphics and animations for the user interface](#)
11. [SSC/N8429: Conduct usability tests on the planned user experience designs at different stages](#)
12. [SSC/N8455: Design Accessible and Inclusive User Experiences](#)

SSC/N8453: Develop User Experience (UX) design guidelines and best practices

Description

Develop User Experience (UX) design guidelines and best practices

Scope

The scope covers the following :

- Develop User Experience (UX) design guidelines and best practices

Elements and Performance Criteria

To be competent, the user/individual on the job must be able to:

- PC1.** apply fundamental design principles consistently throughout the user experience design process, ensuring relevance to current trends and best practices
- PC2.** design research strategies to gather user requirements and analyze behavior patterns
- PC3.** integrate Abhram's methodologies into user research, persona development, and journey mapping activities
- PC4.** drive the empathy mapping process to understand users' needs, goals, expectations, behaviour, habits
- PC5.** integrate Abhram's methodologies, such as contextual inquiry, into the user research process to gather in-depth insights into user behavior and motivations
- PC6.** create structured frameworks for brainstorming, envisioning, and evaluating potential solution outcome
- PC7.** facilitate the prototyping process by leading activities in sketching, visualization, and the development of beta versions
- PC8.** ensure that Abhram's methodologies align with the overall UX goals and objectives
- PC9.** conduct research on user behavior, develop user personas, and map out user journeys and flows to enhance the overall user experience

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** fundamental design principles and their application across various UX stages
- KU2.** current trends and best practices in user experience design
- KU3.** methods for designing effective user research strategies
- KU4.** behavior analysis techniques to understand user interactions
- KU5.** Abhram's methodologies and their relevance to UX processes
- KU6.** empathy mapping techniques to capture user emotions and goals
- KU7.** contextual inquiry methods for gathering qualitative insights

Qualification Pack

- KU8.** frameworks and tools for brainstorming and solution evaluation
- KU9.** processes for low- and high-fidelity prototyping, sketching, and visualization
- KU10.** techniques for aligning research methodologies with UX objectives
- KU11.** persona creation and journey mapping based on research data
- KU12.** methods for integrating user feedback into design iterations

Generic Skills (GS)

User/individual on the job needs to know how to:

- GS1.** read and interpret user research data, reports, and design documentation
- GS2.** communicate effectively with stakeholders, team members, and users
- GS3.** stay updated with evolving UX design tools, practices, and methodologies
- GS4.** manage multiple tasks and timelines efficiently during UX projects
- GS5.** manage multiple tasks and timelines efficiently during UX projects

Qualification Pack

Assessment Criteria

SSC/N8420: Design and define style guide/ design system and specifications for developers

Description

This unit is about designing system and style guides

Scope

The scope covers the following :

- Design systems and style guides

Elements and Performance Criteria

To be competent, the user/individual on the job must be able to:

- PC1.** establish typography systems by organizing titles, subtitles, headings (H1, H2, H3), body text, and captions for use in design
- PC2.** define specifications and provide examples for the spacing, padding, and placement of design elements
- PC3.** address interface layouts across screen sizes
- PC4.** establish the color palette, specifications, and combinations, and illustrate with relevant examples
- PC5.** specify the dimensions, styles, colors, positioning, spacing, and typography of various buttons for the solution based on the contextual requirements
- PC6.** create a centralized repository of reusable UI components (e.g., buttons, forms, icons) to ensure consistency and efficiency in development
- PC7.** develop a collection of common design patterns (e.g., navigation, error handling) to guide design decisions and maintain coherence
- PC8.** work closely with developers, product managers, and other stakeholders to gather requirements and ensure alignment
- PC9.** create comprehensive guidelines for various UI components, including iconography, tooltips, modals, form elements, data tables, navigation menus, charts, tabs, switches, dialogs, content grids, lists, toolbars, date and time pickers, loading indicators, checkboxes, alerts, dropdowns, sliders, steppers, and pagination
- PC10.** document the design rationale used in the design system
- PC11.** break down the design system into smaller, reusable components to enhance flexibility and maintainability
- PC12.** design the system to accommodate future growth and changes in requirements
- PC13.** implement a version control system to track changes, manage different iterations, and collaborate efficiently
- PC14.** adhere to the Web Content Accessibility Guidelines (WCAG) to make the design system accessible to users with disabilities
- PC15.** conduct regular accessibility testing to identify and address potential barriers

Qualification Pack

PC16. consider the needs of diverse users, including those with visual, auditory, motor, or cognitive impairments

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** principles of typography systems including hierarchy, readability, and font pairing
- KU2.** design specifications for spacing, padding, and element alignment
- KU3.** responsive design techniques for interface layout adaptation across screen sizes
- KU4.** fundamentals of color theory, contrast ratios, and color harmony in UI design
- KU5.** contextual application of button styles including size, shape, color, and interactive states
- KU6.** structure and benefits of centralized repositories for reusable UI components
- KU7.** standard design patterns for navigation, error handling, and user flow consistency
- KU8.** methods to collect and translate requirements from stakeholders into design specifications
- KU9.** component-level design standards for UI elements such as modals, forms, and tables
- KU10.** techniques to document design rationale and ensure traceability
- KU11.** modular design principles for creating flexible and reusable components
- KU12.** scalable system architecture for future expansion and design evolution
- KU13.** version control tools and workflows for managing design assets and iterations
- KU14.** Web Content Accessibility Guidelines (WCAG) principles and compliance methods
- KU15.** techniques for conducting accessibility testing and identifying usability barriers
- KU16.** techniques for conducting accessibility testing and identifying usability barriers

Generic Skills (GS)

User/individual on the job needs to know how to:

- GS1.** read and interpret design documentation, guidelines, and stakeholder feedback
- GS2.** communicate effectively with developers, designers, and product managers
- GS3.** stay updated on industry trends, tools, and standards in UI/UX design systems
- GS4.** manage tasks and timelines to ensure timely delivery of design components
- GS5.** use design and prototyping tools such as Figma, Adobe XD, or Sketch
- GS6.** collaborate using version control systems and shared repositories (e.g., Git, Abstract)

SSC/N8454: Conduct Business Analysis and Develop User-Centric Use Cases

Description

Conduct Business Analysis and Develop User-Centric Use Cases

Scope

The scope covers the following :

- Conduct Business Analysis and Develop User-Centric Use Cases

Elements and Performance Criteria

To be competent, the user/individual on the job must be able to:

- PC1.** identify potential business challenges and opportunities for developing business cases
- PC2.** evaluate organisational capability to deliver identified business cases
- PC3.** present findings and recommendations of business cases to key stakeholders
- PC4.** involve stakeholders in project initiation to capture their needs, expectations, and constraints
- PC5.** gather stakeholder support to develop solutions for identified business cases
- PC6.** develop new use cases for identified business cases
- PC7.** assist in establishing business objectives and outlining the technical specifications of the solution based on the identified requirements
- PC8.** collect stakeholder feedback to gain insights into their expectations and challenges
- PC9.** balance the needs of different stakeholders while keeping the project's goals in mind
- PC10.** develop and maintain connections with essential stakeholders, including design teams, business managers, product managers, and others
- PC11.** regularly seek feedback from stakeholders to validate design concepts and ensure they align with their needs
- PC12.** determine processes for user behaviour research, user persona development, user journeys and user flows

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** methods to identify and analyse business challenges, risks, and growth opportunities
- KU2.** techniques to evaluate organizational readiness and capability for project execution
- KU3.** presentation formats and communication strategies for sharing business case findings
- KU4.** stakeholder mapping, engagement techniques, and requirement gathering approaches
- KU5.** collaborative strategies for building stakeholder support and solution development
- KU6.** methods for creating new use cases based on evolving business scenarios
- KU7.** procedures for defining business objectives and technical requirements

Qualification Pack

- KU8.** tools and techniques for collecting, organizing, and analysing stakeholder feedback
- KU9.** conflict resolution and negotiation strategies to balance competing stakeholder needs
- KU10.** relationship-building techniques for maintaining ongoing stakeholder collaboration
- KU11.** validation methods for aligning design concepts with stakeholder expectations
- KU12.** processes for conducting user behaviour research, developing personas, and mapping user journeys and flows

Generic Skills (GS)

User/individual on the job needs to know how to:

- GS1.** read and interpret business documents, stakeholder communications, and technical requirements
- GS2.** communicate clearly and persuasively with internal and external stakeholders
- GS3.** manage time effectively to meet project milestones and stakeholder expectations
- GS4.** collaborate cross-functionally with teams including design, product, and business
- GS5.** analyse stakeholder input and business data to support informed decision-making
- GS6.** use tools for documenting use cases, feedback, and research insights (e.g., Confluence, Jira)

Qualification Pack

SSC/N8422: Conduct a competitive analysis on strength and weakness of competitors products

Description

This unit is about evaluating industry trends and analyzing the strength and weakness of competitor products

Scope

The scope covers the following :

- Industry Trends
- Competitor Analysis

Elements and Performance Criteria

To be competent, the user/individual on the job must be able to:

- PC1.** gather and analyse intelligence about products, customers, competitors and landscapes
- PC2.** identify standard and emerging UI/UX trends, design principles and best practices
- PC3.** stay up to date with latest industry trends
- PC4.** observe user interactions with competitor products to identify pain points and areas for improvement
- PC5.** monitor the performance of different design elements and features on competitor websites
- PC6.** analyze the differences between your product and competitors' offerings
- PC7.** ensure product complies with the latest accessibility guidelines
- PC8.** evaluate solutions based on criteria such as tone, features, user reviews, wait/load times, customer service, overall design, etc.
- PC9.** track competitors' financial performance to assess their market position and investment in UX

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** techniques for gathering and analysing competitive intelligence on products, customers, and market landscapes
- KU2.** standard and emerging UI/UX design trends, principles, and frameworks
- KU3.** sources and methods to stay updated on industry trends, news, and innovations
- KU4.** strategies for conducting competitor usability analysis and identifying user pain points
- KU5.** methods to assess the effectiveness of competitor design features and user interface elements
- KU6.** comparative analysis techniques to evaluate key differences between products and competing solutions

Qualification Pack

- KU7.** Web Content Accessibility Guidelines (WCAG) and compliance requirements for product design
- KU8.** evaluation criteria and benchmarking metrics for assessing design solutions (e.g., usability, tone, speed, customer support)
- KU9.** techniques to interpret financial and performance reports of competitors to gauge UX investment and market strategy

Generic Skills (GS)

User/individual on the job needs to know how to:

- GS1.** read and interpret competitor analysis reports, user reviews, and trend reports
- GS2.** communicate research insights clearly to team members and stakeholders
- GS3.** organize and manage research data using spreadsheets, databases, or visualization tools
- GS4.** apply critical thinking to draw actionable insights from data and user behavior
- GS5.** evaluate and present findings in formats like SWOT analysis, UX audits, and competitor benchmarking charts

Qualification Pack

SSC/N8423: Create user personas to encapsulate and communicate user behaviour patterns

Description

This unit is about creating user personas to identify user behaviour patterns

Scope

The scope covers the following :

- Research behaviour patterns
- Evaluate user interview data
- Classify personas
- Create personas
- Utilise personas

Elements and Performance Criteria

To be competent, the user/individual on the job must be able to:

- PC1.** identify research methods to gather data on user behavior
- PC2.** recruit a diverse group of unbiased participants for research, taking into account demographic and psychographic factors
- PC3.** incorporate the impact of new technologies like AI, VR, AR, and IoT on user behaviors and expectations
- PC4.** collect user behavior data using various methods such as questionnaires, online and offline interviews, face-to-face interviews, and group discussions
- PC5.** evaluate user behaviour data gathered in user interviews
- PC6.** track conversations and trends on platforms like X formerly named Twitter, Facebook, and Instagram
- PC7.** conduct usability testing to observe how users interact with the product and identify areas for improvement
- PC8.** identify and label the key insights and issues gathered from user interviews
- PC9.** verify that the data accurately reflects the current conditions of the interviewees rather than their future expectations
- PC10.** look for specific and repeatable metrics and patterns across users
- PC11.** segment users into distinct categories based on recognized metrics and trends
- PC12.** refine the search by limiting and narrowing down the potential user groups
- PC13.** update demographic information to reflect changes in age distribution, population growth, and geographic shifts
- PC14.** stay informed about emerging design trends and user preferences, such as minimalist interfaces, personalized experiences, and ethical design
- PC15.** develop appropriate personas to represent each user group
- PC16.** develop an identity name and select a suitable image to symbolize the individual

Qualification Pack

- PC17.** develop a detailed persona that includes the individual's age, educational background, profession, skills, attitudes, preferences, aversions, habits, and other relevant characteristics
- PC18.** verify that personas accurately represent the data and findings from investigations
- PC19.** address concerns related to data privacy and security, and how they impact user behavior and trust
- PC20.** assess situations where the personas require the use of the solution
- PC21.** continuously gather feedback from users through surveys, usability testing, and other methods to inform persona updates
- PC22.** leverage user personas to enhance functional design during the entire development process

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** various research methods for collecting user behavior data, including qualitative and quantitative techniques
- KU2.** strategies for recruiting diverse and unbiased participants based on demographic and psychographic profiles
- KU3.** influence of emerging technologies like AI, VR, AR, and IoT on user behavior and expectations
- KU4.** techniques for conducting user research such as interviews, questionnaires, and group discussions
- KU5.** approaches for evaluating and interpreting user behavior data from different research activities
- KU6.** methods to monitor and analyze user conversations and trends on social media platforms
- KU7.** usability testing methodologies for identifying usability issues and areas for improvement
- KU8.** frameworks for identifying key insights, pain points, and behavior patterns from user research
- KU9.** techniques to ensure research data reflects real-world conditions and current user context
- KU10.** metrics and analytical tools to identify consistent patterns in user behavior across segments
- KU11.** principles of user segmentation based on behavioral, demographic, and psychographic data
- KU12.** methods for refining user research scope by filtering user groups for more targeted analysis
- KU13.** data updating practices to reflect changes in population demographics and user locations
- KU14.** current and emerging trends in design preferences and user expectations (e.g., minimalism, personalization)
- KU15.** persona creation techniques based on validated user research data
- KU16.** strategies for developing meaningful persona representations including names, visuals, and traits
- KU17.** elements of a comprehensive persona including lifestyle, preferences, behaviors, skills, and habits
- KU18.** validation techniques to ensure persona accuracy based on research findings
- KU19.** data privacy and security considerations and their impact on user behavior and trust
- KU20.** how to map persona needs to use-case scenarios and functional requirements

Qualification Pack

KU21. continuous research practices for keeping personas updated and aligned with user evolution

KU22. how to apply personas effectively throughout the product design and development lifecycle

Generic Skills (GS)

User/individual on the job needs to know how to:

- GS1.** read, collect, and interpret user data from research instruments such as surveys, interviews, and usability tests
- GS2.** communicate effectively with research participants, design teams, and stakeholders to gather and share insights
- GS3.** organize and manage research data systematically while maintaining clear documentation
- GS4.** analyze behavioral patterns and usability issues using critical thinking and evidence-based methods
- GS5.** use digital tools and platforms for conducting user research, creating personas, and tracking feedback

Qualification Pack

SSC/N8424: Develop sitemap and information architecture for the solution planned for the customer

Description

This unit is about developing sitemap and information architecture for the solution

Scope

The scope covers the following :

- Prepare information hierarchy
- Build navigation hierarchy
- Site mapping

Elements and Performance Criteria

To be competent, the user/individual on the job must be able to:

- PC1.** create a detailed inventory of information components for each page of the solution
- PC2.** gather and arrange media assets, such as images, videos, and audio files
- PC3.** compile and include pertinent documents such as Word files, PDFs, and PowerPoint presentations
- PC4.** design primarily for mobile devices, ensuring optimal user experience across different screen sizes and orientations
- PC5.** verify that all relevant URL links are correctly included and documented for easy access and reference
- PC6.** create a Taxonomy to Structure Unstructured Information and Offer Descriptive Details
- PC7.** optimize information architecture for natural language queries and conversational interactions
- PC8.** structure content components according to users' mental frameworks
- PC9.** explore the use of AI-driven content generation tools to streamline content creation
- PC10.** provide seamless, native-like experiences with offline capabilities
- PC11.** develop a user-friendly navigation system that allows visitors to effortlessly find the information they are seeking
- PC12.** create a navigation system that includes features such as buttons, menus, and a table of contents
- PC13.** adhere to WCAG (Web Content Accessibility Guidelines) and other accessibility standards
- PC14.** design for users with disabilities, considering factors like color contrast, font size, and keyboard navigation
- PC15.** choose the suitable navigation style for the solution (e.g., hierarchical, global, local, etc.)
- PC16.** follow Web Content Accessibility Guidelines to promote inclusivity for users with disabilities
- PC17.** design effective labels that capture user attention and clearly communicate what to expect when clicking a link
- PC18.** utilize advanced analytics tools to track user behavior and measure performance

Qualification Pack

- PC19.** select the appropriate site map pattern (e.g., single page model, flat structure, index pages, strict hierarchy, or co-existing hierarchies) based on project requirements
- PC20.** develop a comprehensive content strategy that aligns with the overall business goals and target audience
- PC21.** conduct regular user testing to gather feedback and identify areas for improvement
- PC22.** deconstruct UI components into smaller, reusable elements
- PC23.** utilize tools like Google Analytics to track user behavior and measure performance
- PC24.** develop sitemaps to visualize content structure and outline navigation pathways
- PC25.** communicate Information Architecture and Site Maps to Key Stakeholders and Development Teams

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** principles of information architecture, including hierarchy, labeling, taxonomy, and navigation
- KU2.** methods to organize content according to users mental models and behavioral patterns
- KU3.** tools and techniques for structuring and managing multimedia content (images, videos, documents)
- KU4.** strategies for developing mobile-first and responsive design layouts
- KU5.** accessibility standards such as WCAG and how to apply them in content and navigation design
- KU6.** content strategy principles that align business goals with user needs
- KU7.** methods for creating and communicating sitemaps and navigation systems to stakeholders
- KU8.** advanced tools for user analytics, content tracking, and performance measurement
- KU9.** processes and benefits of AI-driven content creation and conversational interfaces
- KU10.** techniques for user testing, gathering feedback, and iterating based on insights

Generic Skills (GS)

User/individual on the job needs to know how to:

- GS1.** organize and manage digital assets (media files, documents, URLs) systematically for content development
- GS2.** communicate effectively with cross-functional teams and stakeholders to align on content and architecture goals
- GS3.** interpret user data and analytics to refine content strategy and navigation structure
- GS4.** use digital tools for creating sitemaps, navigation menus, and tracking user engagement
- GS5.** apply accessibility guidelines and ensure inclusive design practices across all content formats
- GS6.** stay updated with the latest trends in mobile-first design, AI tools, and information architecture practices

SSC/N8425: Develop user experience maps, user journeys and user flows

Description

This unit is about developing user experience maps, user journeys and user flows

Scope

The scope covers the following :

- Create user experience maps
- Create user journeys
- Create user flows

Elements and Performance Criteria

To be competent, the user/individual on the job must be able to:

- PC1.** define the boundaries of the user experience map
- PC2.** determine the expectations that a user persona has regarding their interaction with the solution
- PC3.** outline the phases that users go through when interacting with the solution
- PC4.** create detailed and realistic personas that represent different user segments, considering factors like demographics, psychographics, and motivations
- PC5.** clearly outline the process by which customers find your solution, assess your services, choose you over competitors, complete their purchase, and interact with your brand
- PC6.** incorporate touchpoints beyond traditional channels (e.g., social media, chatbots, voice assistants) to reflect modern user behaviors
- PC7.** identify customer interaction touchpoints with the solution
- PC8.** design small, meaningful interactions that enhance the overall user experience and contribute to brand identity
- PC9.** map out the journey in a step-by-step interaction format
- PC10.** assess user objectives and the different user pathways available to accomplish a specific user goal
- PC11.** ensure that the workflows accurately capture complexities, including multiple users, scenarios, touchpoints, and mediums

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** principles and best practices for user experience (UX) mapping and journey mapping
- KU2.** methods to define user personas and segment users based on demographics, psychographics, and motivations
- KU3.** factors that influence user expectations and behaviors during their interaction with a product or service

Qualification Pack

- KU4.** stages of a user's journey, from awareness to post-purchase engagement
- KU5.** touchpoints and channels (traditional and modern, including social media, chatbots, and voice assistants) where users interact with the brand
- KU6.** techniques for designing meaningful interactions that enhance user experience and strengthen brand identity
- KU7.** workflows and how to accurately capture user scenarios, touchpoints, and complexities in mapping
- KU8.** methods to assess user goals and the available pathways for accomplishing those goals
- KU9.** tools for visually mapping user interactions and creating detailed journey maps

Generic Skills (GS)

User/individual on the job needs to know how to:

- GS1.** define and structure user experience maps to reflect the boundaries and user journey stages
- GS2.** design user personas and identify their expectations for interactions with the solution
- GS3.** map user touchpoints and integrate diverse channels, including modern ones like chatbots and social media
- GS4.** design user interaction steps that align with user objectives and contribute to a seamless experience
- GS5.** collaborate with cross-functional teams to ensure that customer interactions are accurately captured in the journey map
- GS6.** use mapping tools to visualize user workflows and identify key interaction points

Qualification Pack

Assessment Criteria

Assessment Criteria for Outcomes	Theory Marks	Practical Marks	Project Marks	Viva Marks
	30	50	-	20
PC1. define the boundaries of the user experience map	3	5	-	2
PC2. determine the expectations that a user persona has regarding their interaction with the solution	3	4	-	2
PC3. outline the phases that users go through when interacting with the solution	3	4	-	2
PC4. create detailed and realistic personas that represent different user segments, considering factors like demographics, psychographics, and motivations	1	4	-	1
PC5. clearly outline the process by which customers find your solution, assess your services, choose you over competitors, complete their purchase, and interact with your brand	3	5	-	2
PC6. incorporate touchpoints beyond traditional channels (e.g., social media, chatbots, voice assistants) to reflect modern user behaviors	3	5	-	2
PC7. identify customer interaction touchpoints with the solution	2	4	-	1

SSC/N8426: Develop detailed wireframes to illustrate flow, interactions and interface elements

Description

This unit is about developing wireframes and evaluating user experience

Scope

The scope covers the following :

- Create wireframes
- Evaluate user experience

Elements and Performance Criteria

To be competent, the user/individual on the job must be able to:

- PC1.** create wireframes to illustrate the user flow, interactions, functionalities, features, and fundamental design elements tailored to the device's form factor or screen size
- PC2.** verify that wireframe transitions are clear and follow a logical flow
- PC3.** adhere to accessibility guidelines (e.g., WCAG) to create inclusive designs that cater to users with disabilities
- PC4.** regularly collect and assess data regarding user behavior and preferences
- PC5.** assess the customer's objectives and determine their desired outcomes from utilizing the solution
- PC6.** design for a wide range of users, including those from different cultural backgrounds, age groups, and socioeconomic statuses
- PC7.** determine the user's intent throughout different stages of the customer journey
- PC8.** identify customer pain points and assess the user journey to enhance overall experience
- PC9.** design for mobile devices as the primary platform, ensuring a seamless user experience across different screen sizes
- PC10.** create and assess a wireframe prototype to analyze user flow and interactions
- PC11.** assess the customer's overall experience and gather their feedback
- PC12.** regularly analyze insights from usability testing sessions and application analytics to enhance the user journey

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** principles of wire framing and how to create wireframes that illustrate user flow, interactions, and features across different screen sizes and devices
- KU2.** importance of clear, logical transitions in wireframe designs to ensure intuitive user navigation

Qualification Pack

- KU3.** accessibility guidelines such as WCAG (Web Content Accessibility Guidelines) and how to apply them to create inclusive designs for users with disabilities
- KU4.** methods to gather and analyse user data, preferences, and behaviour through tools and research techniques
- KU5.** customer goals and objectives, and how to align design to meet these desired outcomes
- KU6.** cultural, demographic, and socioeconomic diversity in user groups and how to design for a wide range of users
- KU7.** user intent across different stages of the customer journey and how to cater to it through design
- KU8.** techniques for identifying customer pain points and assessing the user journey to improve user experience
- KU9.** best practices for mobile-first design, ensuring optimal user experience across various devices and screen sizes
- KU10.** wireframe prototype creation and the use of prototypes for analysing and refining user flow and interactions
- KU11.** how to assess overall customer experience through feedback and iterative testing
- KU12.** methods for analysing insights from usability tests and application analytics to continually improve the user journey

Generic Skills (GS)

User/individual on the job needs to know how to:

- GS1.** create wireframes that reflect the user flow, interactions, and essential design elements specific to each device or screen size
- GS2.** verify the clarity and logical progression of wireframe transitions to ensure seamless navigation
- GS3.** apply accessibility principles to designs to ensure they are inclusive and cater to diverse user needs
- GS4.** collect, analyze, and interpret user behavior data to enhance design decisions
- GS5.** design with the user intent and desired outcomes in mind, ensuring the solution meets customer objectives
- GS6.** account for diversity in users, considering factors like culture, age, and socioeconomic status when designing the user experience

SSC/N8427: Develop a visual design/screens for the proposed wireframe

Description

This unit is about developing visual design for a variety of devices and focus on core user experience, screen specifics and usability tests

Scope

The scope covers the following :

- Core user experience
- Device Variety
- Screen specifics
- Usability Tests

Elements and Performance Criteria

To be competent, the user/individual on the job must be able to:

- PC1.** analyse the most common and important tasks customers must complete using the interface
- PC2.** identify the various device groups for the product such as mobile devices, tablets, desktops, smart TVs, smartwatches, etc.
- PC3.** adhere to standards like WCAG (Web Content Accessibility Guidelines) to make your designs inclusive
- PC4.** identify the various modes of interaction that depend on the particular device group
- PC5.** adapt user experience based on the various modes of interaction
- PC6.** create engaging AR and VR experiences that blend the digital and physical worlds seamlessly
- PC7.** use micro interactions to provide subtle feedback and delight users
- PC8.** design for smallest screens by prioritizing most essential features and elements only
- PC9.** ensure that big screens are not developed only by scaling up small screen designs
- PC10.** design interfaces that accommodate intuitive interactions within 3D spaces
- PC11.** pay attention to image quality as screens are scaled up
- PC12.** provide consistent experience over various device groups
- PC13.** provide seamless experience as users move across various device groups
- PC14.** incorporate physical sensations to enhance user experiences, especially in mobile devices
- PC15.** perform usability tests for solution with real users across various device groups
- PC16.** protect user data and ensure transparency in data collection and usage
- PC17.** uncover UX issues to resolve prior to release

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

Qualification Pack

- KU1.** how to analyse the most common and important tasks that customers need to complete within an interface to ensure the design addresses user needs
- KU2.** different device groups, such as mobile devices, tablets, desktops, smart TVs, and smartwatches, and how each platform affects user interactions and design considerations
- KU3.** accessibility standards like WCAG (Web Content Accessibility Guidelines) and how to apply them to make designs inclusive for a wide range of users
- KU4.** different modes of interaction across device groups (e.g., touch, voice, gesture) and how they affect user experience and design decisions
- KU5.** how to adapt user experience based on different modes of interaction to ensure the design is intuitive across devices
- KU6.** principles of creating engaging AR (Augmented Reality) and VR (Virtual Reality) experiences that integrate digital and physical elements seamlessly
- KU7.** role of micro-interactions in providing subtle feedback and enhancing user delight
- KU8.** best practices for designing for small screens by prioritizing essential features and ensuring that the interface is usable and intuitive
- KU9.** how to design for large screens by considering usability and ensuring that designs are not simply scaled versions of mobile screens
- KU10.** designing interfaces for 3D spaces and ensuring that users can intuitively interact with them
- KU11.** impact of image quality on larger screens and the importance of optimizing visual assets for high-definition displays
- KU12.** how to create a consistent user experience across different device groups and ensure that the user interaction is smooth, regardless of the device used
- KU13.** ensuring that users can transition seamlessly between different device groups, maintaining continuity and ease of use
- KU14.** how to integrate physical sensations (e.g., haptic feedback) into user interactions, particularly on mobile devices, to enhance user experience
- KU15.** importance of performing usability tests on real users across various device groups to uncover issues and ensure the design meets user needs
- KU16.** how to protect user data and ensure transparency in data collection and usage, in line with privacy and ethical guidelines
- KU17.** methods for identifying and resolving UX issues before the product release to ensure a high-quality user experience

Generic Skills (GS)

User/individual on the job needs to know how to:

- GS1.** analyse the core tasks users must perform to ensure the design supports key objectives and simplifies interactions
- GS2.** identify and understand the various device groups to ensure designs are optimized for each platform's unique features and constraints
- GS3.** apply accessibility standards and guidelines to create designs that are inclusive and usable by people with disabilities
- GS4.** adapt user experience to accommodate diverse modes of interaction and ensure seamless usability across device groups

Qualification Pack

- GS5.** integrate immersive experiences (AR/VR) and micro-interactions to create engaging, memorable user experiences

Qualification Pack

SSC/N8428: Design the assets such as imagery, graphics and animations for the user interface

Description

This unit is about designing UI assets and engaging with other teams to implement solutions

Scope

The scope covers the following :

- UI Assets
- Solution Implementation

Elements and Performance Criteria

To be competent, the user/individual on the job must be able to:

- PC1.** drive the UI asset development process for imagery, graphics and animations for the user interface
- PC2.** define final theme, specs, and guidelines required for implementation
- PC3.** prepare and share design specifications to the development team
- PC4.** engage with development teams to implement solutions
- PC5.** apply principles of human-centered design to create intuitive and engaging interfaces
- PC6.** communicate complex ideas effectively through visuals and animations
- PC7.** use animation to guide users, provide feedback, and enhance interactions
- PC8.** ensure that UI assets are accessible to users with disabilities (e.g., color contrast, alt text, keyboard navigation)

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** UI asset development process, including creating imagery, graphics, and animations that align with the overall design and user needs
- KU2.** how to define the final theme, specifications, and guidelines required for implementation, ensuring alignment with user expectations and brand identity
- KU3.** importance of preparing and sharing clear and detailed design specifications with the development team for smooth implementation
- KU4.** role of engaging with development teams to ensure seamless collaboration and implementation of UI solutions that meet design expectations
- KU5.** principles of human-centered design, ensuring that user needs, behaviors, and preferences are prioritized in creating intuitive and engaging interfaces
- KU6.** effective communication techniques to present complex ideas visually, utilizing graphics, imagery, and animations to convey concepts clearly

Qualification Pack

- KU7.** how to use animation strategically to guide users, provide visual feedback, and enhance interactions in the user interface
- KU8.** accessibility standards and best practices for UI design to ensure UI assets are usable by all users, including those with disabilities (e.g., color contrast, alt text, keyboard navigation)

Generic Skills (GS)

User/individual on the job needs to know how to:

- GS1.** define design themes, specifications, and guidelines, and ensure they are clearly communicated to stakeholders for effective implementation
- GS2.** prepare design specifications and documentation for development teams, ensuring clarity and accuracy to minimize miscommunication
- GS3.** collaborate with development teams to implement UI solutions effectively, ensuring designs are faithfully executed and meet project objectives
- GS4.** apply human-centered design principles to create user-friendly, engaging interfaces that prioritize usability and user satisfaction
- GS5.** communicate complex design ideas using visuals and animations to simplify and clarify concepts for stakeholders and team members
- GS6.** ensure that UI assets are designed with accessibility in mind, making them usable by individuals with various disabilities

Qualification Pack

Assessment Criteria

SSC/N8429: Conduct usability tests on the planned user experience designs at different stages

Description

This unit is about creating, facilitating and reviewing test plans

Scope

The scope covers the following :

- Create Test Plan
- Facilitate Tests
- Review Test Findings
- Create Test Report

Elements and Performance Criteria

To be competent, the user/individual on the job must be able to:

- PC1.** develop limited-functionality prototypes of the designs to test relevant design concepts
- PC2.** finalize the list of features, functionalities and tasks to be tested
- PC3.** develop appropriate KPIs/metrics to measure prototype performance
- PC4.** recruit diverse unbiased users to participate in tests considering both demographic and psychographic factors
- PC5.** finalize the format for the usability tests (e.g., laboratory usability testing, remote usability testing, etc.)
- PC6.** ensure test environments are kept as realistic as possible
- PC7.** shape network bandwidth and limit bandwidth according to test needs
- PC8.** document test results using confidential test artefacts such as spreadsheets, surveys, audio recordings, screen recordings, participant recordings, etc.
- PC9.** analyse test results, evaluate trends, note possible problems and identify potential solutions
- PC10.** evaluate quantitative information such as time on tasks, success and failure rates, number of clicks, etc.
- PC11.** evaluate qualitative information such as stress responses, subjective satisfaction, perceived effort or difficulty
- PC12.** prepare a summary of what was tested, details of the testing team and the goal of the session with descriptions of all findings
- PC13.** describe methodology used for the sessions including the tasks or scenarios that were tested, the KPIs/metrics selected and brief descriptions of user profiles and segments
- PC14.** list all negative findings and provide potential solutions to solve them
- PC15.** list all positive findings and ensure development is on the right track

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

Qualification Pack

- KU1.** process of developing limited-functionality prototypes to test relevant design concepts and validate design assumptions
- KU2.** how to define and finalize a comprehensive list of features, functionalities, and tasks to be tested in usability tests
- KU3.** appropriate KPIs and metrics to measure prototype performance, ensuring that they align with project goals and user needs
- KU4.** how to recruit diverse, unbiased users for testing, considering demographic and psychographic factors to ensure a representative sample
- KU5.** different formats for usability tests (e.g., laboratory usability testing, remote usability testing) and the benefits of each format for various testing needs
- KU6.** importance of maintaining realistic test environments to simulate real-world conditions for accurate results
- KU7.** how to manage network bandwidth to ensure test environments are optimized for the needs of usability testing
- KU8.** best practices for documenting test results using various confidential test artifacts such as spreadsheets, surveys, audio recordings, screen recordings, and participant recordings
- KU9.** techniques for analysing and interpreting test results to evaluate trends, identify problems, and propose potential solutions
- KU10.** how to evaluate both quantitative data (e.g., time on tasks, success/failure rates) and qualitative data (e.g., stress responses, subjective satisfaction) to gain a comprehensive understanding of user experiences
- KU11.** how to summarize usability test findings, detailing the test process, team roles, and key outcomes
- KU12.** how to describe the methodology used in testing sessions, including the tasks tested, KPIs/metrics selected, and user profiles
- KU13.** how to identify and provide solutions for negative findings, and ensure that positive findings are used to confirm that development is on track

Generic Skills (GS)

User/individual on the job needs to know how to:

- GS1.** develop limited-functionality prototypes to validate design concepts and test assumptions
- GS2.** finalize the scope of usability tests by determining relevant features, functionalities, and tasks to be tested
- GS3.** develop and apply KPIs/metrics to measure prototype performance and track progress
- GS4.** recruit a diverse and unbiased group of users for usability testing, ensuring representation across demographics and psychographics
- GS5.** decide on the appropriate format for usability testing, ensuring alignment with project goals and resources
- GS6.** develop test environments, document results, analyze usability data, and summarize findings to assess user experience, identify issues, and guide development improvements

Qualification Pack

Assessment Criteria

Assessment Criteria for Outcomes	Theory Marks	Practical Marks	Project Marks	Viva Marks
	30	50	-	20
PC1. develop limited-functionality prototypes of the designs to test relevant design concepts	2	4	-	1
PC2. finalize the list of features, functionalities and tasks to be tested	2	3	-	1
PC3. develop appropriate KPIs/metrics to measure prototype performance	2	3	-	2
PC4. recruit diverse unbiased users to participate in tests considering both demographic and psychographic factors	2	3	-	1
PC5. finalize the format for the usability tests (e.g., laboratory usability testing, remote usability testing, etc.)	2	3	-	1
PC6. ensure test environments are kept as realistic as possible	2	4	-	1
PC7. shape network bandwidth and limit bandwidth according to test needs	2	4	-	2
PC8. document test results using confidential test artefacts such as spreadsheets, surveys, audio recordings, screen recordings, participant recordings, etc.	2	4	-	1
PC9. analyse test results, evaluate trends, note possible problems and identify potential solutions	2	3	-	2
PC10. evaluate quantitative information such as time on tasks, success and failure rates, number of clicks, etc.	2	3	-	2
PC11. evaluate qualitative information such as stress responses, subjective satisfaction, perceived effort or difficulty	2	4	-	1
PC12. prepare a summary of what was tested, details of the testing team and the goal of the session with descriptions of all findings	2	3	-	1

Qualification Pack

Assessment Criteria for Outcomes	Theory Marks	Practical Marks	Project Marks	Viva Marks
PC13. describe methodology used for the sessions including the tasks or scenarios that were tested, the KPIs/metrics selected and brief descriptions of user profiles and segments	2	3	-	1
PC14. list all negative findings and provide potential solutions to solve them	2	3	-	2
PC15. list all positive findings and ensure development is on the right track	2	3	-	1

SSC/N8455: Design Accessible and Inclusive User Experiences

Description

Design Accessible and Inclusive User Experiences

Scope

The scope covers the following :

- Design Accessible and Inclusive User Experiences

Elements and Performance Criteria

To be competent, the user/individual on the job must be able to:

- PC1.** identify accessibility standards and guidelines (e.g., WCAG, ADA, Section 508) relevant to the project requirements
- PC2.** collaborate with stakeholders to define accessibility goals and benchmarks for the user experience
- PC3.** conduct accessibility audits of existing designs and systems using automated tools and manual testing methods
- PC4.** recruit users with diverse abilities, including those with disabilities, to participate in accessibility tests
- PC5.** finalize the format for accessibility tests (e.g., in-person, remote, or hybrid) based on the target user group and test objectives
- PC6.** ensure test environments simulate realistic conditions, including device diversity, network constraints, and physical settings
- PC7.** document accessibility test results using tools like spreadsheets, annotated visuals, recordings, and transcripts while maintaining confidentiality
- PC8.** analyze qualitative and quantitative test data to identify accessibility barriers and evaluate user interactions
- PC9.** recommend design adjustments or solutions to address identified accessibility challenges
- PC10.** Assess how design choices impact the overall revenue strategy by considering customer experience, brand alignment, and conversion metrics
- PC11.** Translate customer insights and business objectives into user-centered product solutions, ensuring that the final design meets both user expectations and company goals
- PC12.** Conduct user research (e.g., interviews, surveys, user testing) to gather customer insights and define user personas
- PC13.** Incorporate data privacy principles (e.g., GDPR, CCPA) into the user experience design process, ensuring that personal data is handled responsibly
- PC14.** collaborate with developers to implement accessible design solutions and validate their effectiveness through iterative testing
- PC15.** create accessible design assets, including typography, color schemes, and interaction elements, to ensure inclusivity

Qualification Pack

PC16. educate team members and stakeholders on the importance of accessibility and best practices for inclusive design

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** various accessibility standards and guidelines (e.g., WCAG, ADA, Section 508) relevant to the project requirements
- KU2.** how to collaborate with stakeholders to define accessibility goals and benchmarks for the user experience
- KU3.** methods and tools used for conducting accessibility audits, including automated tools and manual testing techniques
- KU4.** best practices for recruiting users with diverse abilities, including those with disabilities, for accessibility tests
- KU5.** how to determine the appropriate format for accessibility tests (e.g., in-person, remote, or hybrid) based on user needs and test objectives
- KU6.** how to ensure test environments simulate realistic conditions, including device diversity, network constraints, and physical settings
- KU7.** techniques for documenting accessibility test results, ensuring confidentiality and clarity, using tools like spreadsheets, annotated visuals, and recordings
- KU8.** how to analyse qualitative and quantitative accessibility test data to identify barriers and evaluate user interactions
- KU9.** how to recommend design adjustments or solutions to address identified accessibility challenges
- KU10.** impact of design choices on overall revenue strategy, considering customer experience, brand alignment, and conversion metrics
- KU11.** how to translate customer insights and business objectives into user-centered product solutions
- KU12.** methods for conducting user research (e.g., interviews, surveys, user testing) to gather customer insights and define user personas
- KU13.** importance of data privacy principles (e.g., GDPR, CCPA) in the user experience design process, and how to ensure personal data is handled responsibly
- KU14.** how to collaborate with developers to implement accessible design solutions and validate their effectiveness through iterative testing
- KU15.** how to create accessible design assets, including typography, color schemes, and interaction elements, to ensure inclusivity
- KU16.** strategies for educating team members and stakeholders on the importance of accessibility and best practices for inclusive design

Generic Skills (GS)

User/individual on the job needs to know how to:

- GS1.** identify and apply relevant accessibility standards and guidelines to the design process

Qualification Pack

- GS2.** collaborate effectively with stakeholders to define accessibility goals and ensure inclusivity in the design process
- GS3.** conduct comprehensive accessibility audits using both automated tools and manual methods
- GS4.** recruit and engage users with diverse abilities for accessibility testing, ensuring comprehensive user feedback
- GS5.** determine the appropriate test format and conditions to ensure the most accurate and relevant accessibility testing results
- GS6.** document and communicate accessibility test results clearly and effectively, ensuring confidentiality and providing actionable insights
- GS7.** recommend actionable design improvements to overcome accessibility barriers and enhance the user experience

Qualification Pack

DGT/VSQ/N0101: Employability Skills (30 Hours)

Description

This unit is about employability skills, Constitutional values, becoming a professional in the 21st Century, digital, financial, and legal literacy, diversity and Inclusion, English and communication skills, customer service, entrepreneurship, and apprenticeship, getting ready for jobs and career development.

Scope

The scope covers the following :

- Introduction to Employability Skills
- Constitutional values - Citizenship
- Becoming a Professional in the 21st Century
- Basic English Skills
- Communication Skills
- Diversity & Inclusion
- Financial and Legal Literacy
- Essential Digital Skills
- Entrepreneurship
- Customer Service
- Getting ready for Apprenticeship & Jobs

Elements and Performance Criteria

Introduction to Employability Skills

To be competent, the user/individual on the job must be able to:

PC1. understand the significance of employability skills in meeting the job requirements

Constitutional values – Citizenship

To be competent, the user/individual on the job must be able to:

PC2. identify constitutional values, civic rights, duties, personal values and ethics and environmentally sustainable practices

Becoming a Professional in the 21st Century

To be competent, the user/individual on the job must be able to:

PC3. explain 21st Century Skills such as Self-Awareness, Behavior Skills, Positive attitude, self-motivation, problem-solving, creative thinking, time management, social and cultural awareness, emotional awareness, continuous learning mindset etc.

Basic English Skills

To be competent, the user/individual on the job must be able to:

PC4. speak with others using some basic English phrases or sentences

Communication Skills

To be competent, the user/individual on the job must be able to:

PC5. follow good manners while communicating with others

PC6. work with others in a team

Qualification Pack

Diversity & Inclusion

To be competent, the user/individual on the job must be able to:

PC7. communicate and behave appropriately with all genders and PwD

PC8. report any issues related to sexual harassment

Financial and Legal Literacy

To be competent, the user/individual on the job must be able to:

PC9. use various financial products and services safely and securely

PC10. calculate income, expenses, savings etc.

PC11. approach the concerned authorities for any exploitation as per legal rights and laws

Essential Digital Skills

To be competent, the user/individual on the job must be able to:

PC12. operate digital devices and use its features and applications securely and safely

PC13. use internet and social media platforms securely and safely

Entrepreneurship

To be competent, the user/individual on the job must be able to:

PC14. identify and assess opportunities for potential business

PC15. identify sources for arranging money and associated financial and legal challenges

Customer Service

To be competent, the user/individual on the job must be able to:

PC16. identify different types of customers

PC17. identify customer needs and address them appropriately

PC18. follow appropriate hygiene and grooming standards

Getting ready for apprenticeship & Jobs

To be competent, the user/individual on the job must be able to:

PC19. create a basic biodata

PC20. search for suitable jobs and apply

PC21. identify and register apprenticeship opportunities as per requirement

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

KU1. need for employability skills

KU2. various constitutional and personal values

KU3. different environmentally sustainable practices and their importance

KU4. Twenty first (21st) century skills and their importance

KU5. how to use basic spoken English language

KU6. Do and dont of effective communication

KU7. inclusivity and its importance

KU8. different types of disabilities and appropriate communication and behaviour towards PwD

KU9. different types of financial products and services

Qualification Pack

- KU10.** how to compute income and expenses
- KU11.** importance of maintaining safety and security in financial transactions
- KU12.** different legal rights and laws
- KU13.** how to operate digital devices and applications safely and securely
- KU14.** ways to identify business opportunities
- KU15.** types of customers and their needs
- KU16.** how to apply for a job and prepare for an interview
- KU17.** apprenticeship scheme and the process of registering on apprenticeship portal

Generic Skills (GS)

User/individual on the job needs to know how to:

- GS1.** communicate effectively using appropriate language
- GS2.** behave politely and appropriately with all
- GS3.** perform basic calculations
- GS4.** solve problems effectively
- GS5.** be careful and attentive at work
- GS6.** use time effectively
- GS7.** maintain hygiene and sanitisation to avoid infection

Assessment Guidelines and Assessment Weightage

Assessment Guidelines

The assessment shall be conducted through an online proctored format, incorporating scenario-based multiple-choice questions designed to effectively evaluate practical understanding and real-world application of concepts. Additionally, it will include a viva-voce and hands-on practical evaluation to comprehensively assess the individual's proficiency in specific learning outcomes.

Minimum Aggregate Passing % at QP Level : 70

(Please note: Every Trainee should score a minimum aggregate passing percentage as specified above, to successfully clear the Qualification Pack assessment.)

Assessment Weightage

Glossary

Sector	Sector is a conglomeration of different business operations having similar business and interests. It may also be defined as a distinct subset of the economy whose components share similar characteristics and interests.
Sub-sector	Sub-sector is derived from a further breakdown based on the characteristics and interests of its components.
Occupation	Occupation is a set of job roles, which perform similar/ related set of functions in an industry.
Job role	Job role defines a unique set of functions that together form a unique employment opportunity in an organisation.
Occupational Standards (OS)	OS specify the standards of performance an individual must achieve when carrying out a function in the workplace, together with the Knowledge and Understanding (KU) they need to meet that standard consistently. Occupational Standards are applicable both in the Indian and global contexts.
Performance Criteria (PC)	Performance Criteria (PC) are statements that together specify the standard of performance required when carrying out a task.
National Occupational Standards (NOS)	NOS are occupational standards which apply uniquely in the Indian context.
Qualifications Pack (QP)	QP comprises the set of OS, together with the educational, training and other criteria required to perform a job role. A QP is assigned a unique qualifications pack code.
Unit Code	Unit code is a unique identifier for an Occupational Standard, which is denoted by an 'N'
Unit Title	Unit title gives a clear overall statement about what the incumbent should be able to do.
Description	Description gives a short summary of the unit content. This would be helpful to anyone searching on a database to verify that this is the appropriate OS they are looking for.
Scope	Scope is a set of statements specifying the range of variables that an individual may have to deal with in carrying out the function which have a critical impact on quality of performance required.

Qualification Pack

Knowledge and Understanding (KU)	Knowledge and Understanding (KU) are statements which together specify the technical, generic, professional and organisational specific knowledge that an individual needs in order to perform to the required standard.
Organisational Context	Organisational context includes the way the organisation is structured and how it operates, including the extent of operative knowledge managers have of their relevant areas of responsibility.
Technical Knowledge	Technical knowledge is the specific knowledge needed to accomplish specific designated responsibilities.
Core Skills/ Generic Skills (GS)	Core skills or Generic Skills (GS) are a group of skills that are the key to learning and working in today's world. These skills are typically needed in any work environment in today's world. These skills are typically needed in any work environment. In the context of the OS, these include communication related skills that are applicable to most job roles.
Electives	Electives are NOS/set of NOS that are identified by the sector as contributive to specialization in a job role. There may be multiple electives within a QP for each specialized job role. Trainees must select at least one elective for the successful completion of a QP with Electives.
Options	Options are NOS/set of NOS that are identified by the sector as additional skills. There may be multiple options within a QP. It is not mandatory to select any of the options to complete a QP with Options.
Sector	Sector is a conglomeration of different business operations having similar business and interests. It may also defined as a distinct subset of the economy whose components share similar characteristics and interests.
Sub-sector	Sub-sector is derived from a further breakdown based on the characteristics and interests of its components.
Occupation	Occupation is a set of job roles, which perform similar/ related set of functions in an industry.
Job role	Job role defines a unique set of functions that together form a unique employment opportunity in an organisation.
Occupational standards (OS)	OS specify the standards of performance an individual must achieve when carrying out a function in the workplace, together with the Knowledge and Understanding (KU) they need to meet that standard consistently. Occupational Standards are applicable both in the Indian and global contexts.
Performance criteria (PC)	Performance Criteria (PC) are statements that together specify the standard of performance required when carrying out a task.

Qualification Pack

National Occupational Standard	NOS are occupational standards which apply uniquely in the Indian context.
Qualifications pack (QP)	QP comprises the set of OSs, together with the educational, training and other criteria required to perform a job role. A QP is assigned a unique qualifications pack code.

Occupational standards (OS)	OS specify the standards of performance an individual must achieve when carrying out a function in the workplace, together with the Knowledge and Understanding (KU) they need to meet that standard consistently. Occupational Standards are applicable both in the Indian and global contexts.
Performance criteria (PC)	Performance Criteria (PC) are statements that together specify the standard of performance required when carrying out a task.
National Occupational Standard	NOS are occupational standards which apply uniquely in the Indian context.

Qualification Pack

Qualifications pack (QP)	QP comprises the set of OSs, together with the educational, training and other criteria required to perform a job role. A QP is assigned a unique qualifications pack code.
Unit code	Unit code is a unique identifier for an Occupational Standard, which is denoted by an 'N'
Unit title	Unit title gives a clear overall statement about what the incumbent should be able to do.
Description	Description gives a short summary of the unit content. This would be helpful to anyone searching on a database to verify that this is the appropriate OS they are looking for.
Scope	Scope is a set of statements specifying the range of variables that an individual may have to deal with in carrying out the function which have a critical impact on quality of performance required.
Knowledge and understanding	Knowledge and Understanding (KU) are statements which together specify the technical, generic, professional and organisational specific knowledge that an individual need in order to perform to the required standard.
Organisational context	Organisational context includes the way the organisation is structured and how it operates, including the extent of operative knowledge managers have of their relevant areas of responsibility.
Technical knowledge	Technical knowledge is the specific knowledge needed to accomplish specific designated responsibilities.
Core skills/ Generic skills	Core skills or Generic Skills (GS) are a group of skills that are the key to learning and working in today's world. These skills are typically needed in any work environment in today's world. In the context of the OS, these include communication related skills that are applicable to most job roles.
Electives	Electives are NOS/set of NOS that are identified by the sector as contributive to specialization in a job role. There may be multiple electives within a QP for each specialised job role. Trainees must select at least one elective for the successful completion of a QP with Electives.
Options	Options are NOS/set of NOS that are identified by the sector as additional skills. There may be multiple options within a QP. It is not mandatory to select any of the options to complete a QP with Options.
Sector	Sector is a conglomeration of different business operations having similar business and interests. It may also defined as a distinct subset of the economy whose components share similar characteristics and interests.

Qualification Pack

Sub-sector	Sub-sector is derived from a further breakdown based on the characteristics and interests of its components.
Occupation	Occupation is a set of job roles, which perform similar/ related set of functions in an industry.
Job role	Job role defines a unique set of functions that together form a unique employment opportunity in an organisation.
Occupational standards (OS)	OS specify the standards of performance an individual must achieve when carrying out a function in the workplace, together with the Knowledge and Understanding (KU) they need to meet that standard consistently.
