## Qualification Pack

### SSC/Q8801: AR/VR Consultant

#### Brief Job Description

An AR/VR Consultant performs a comprehensive analysis of customer requirements, opportunities, costs, and impacts while ensuring data privacy is upheld. It requires creating a functional design for the AR/VR solution that aligns with specified business requirements. Additionally, the consultant must develop project plans and procedures to create solutions and enhance product effectiveness, ensuring that key performance indicators (KPIs) and service goals are met. Setting technical parameters to monitor and manage the performance of the AR/VR architecture and preparing statistical reports on product performance is also essential. Lastly, engaging in innovative research and development within the AR/VR field while staying current with the latest technological trends is crucial to the role. The AR/VR consultant also acts as a strategic advisor and technical expert, guiding businesses through successfully integrating AR/VR technology.

#### Personal Attributes

AR/VR Consultants must be able to communicate effectively. They must have strong interpersonal skills, analytical mindset and a zeal to learn new things.

#### Applicable National Occupational Standards (NOS)

##### Compulsory NOS:

1. [SSC/N8801: Conduct a thorough customer requirement analysis, opportunity analysis, cost analysis, and impact analysis and ensure data privacy](#)
2. [SSC/N8803: Establish a functional design of the AR/VR solution based on the defined business requirements](#)
3. [SSC/N8804: Define project plans and processes to develop solutions and drive product effectiveness, ensuring essential KPIs/service goals are met](#)
4. [SSC/N8809: Define technical parameters to monitor and manage the performance of the AR/VR architecture and develop statistical reports on product performance](#)
5. [SSC/N8818: Conduct cutting-edge research and development in AR/VR and other related fields and be updated with the latest trends in technology](#)
6. [DGT/VSQ/N0102: Employability Skills \(60 Hours\)](#)

## Qualification Pack

### SSC/N8801: Conduct a thorough customer requirement analysis, opportunity analysis, cost analysis, and impact analysis and ensure data privacy

#### Description

This NOS is about understanding the customer requirement and feasibility of the ARVR Solution

#### Scope

The scope covers the following :

- Customer Requirement Analysis, Opportunity Analysis, Product Offering, Cost Analysis, Impact Analysis

#### Elements and Performance Criteria

To be competent, the user/individual on the job must be able to:

- PC1.** Evaluate and define the business requirements of the client
- PC2.** Utilize available studies (market research, internal) and competitive analysis to refine customer needs
- PC3.** Define a product/solution differentiation strategy that is aligned with customer requirements
- PC4.** Coordinate with internal teams (R&D, Design, etc.) to understand user requirements and define user engagement goals
- PC5.** Identify and assess other competitors and providers of similar products/ solutions in the market
- PC6.** Determine new opportunities by highlighting specific areas in the market that are upcoming or underserved
- PC7.** Identify a suitable type of product/solution offering for the customer (or new market opportunity)
- PC8.** Determine if the solution requires the addition of AR/VR features to existing products in the organization
- PC9.** Assess the initialization cost for the AR/VR solution
- PC10.** Evaluate execution cost for the AR/VR solution covering various aspects such as licensing cost, cost of devices/ hardware, content creation cost (including costs for model creation, customization, and outsourcing), resources cost, etc.
- PC11.** Calculate Total Cost of Ownership (TCO) including implementation cost, transition cost, operational cost, and retirement cost
- PC12.** Evaluate various business models (subscription, bundling, etc.) to select the best revenue-generating model
- PC13.** Define the margins for profit
- PC14.** Outline the impact that can be achieved in terms of quality, scalability, and resources by AR/VR implementation
- PC15.** Evaluate the risks associated with AR/VR implementation

## Qualification Pack

- PC16.** Analyse and interpret the impact of adoption and roll-out costs on the AR/VR implementation
- PC17.** Understand the practical implications of data privacy issues and encourage peer learning
- PC18.** ensure that participants learn the components and language necessary for creating compliant consent documents.
- PC19.** Encourage basic data protection measures, such as creating encryption protocols for sensitive data
- PC20.** Create a draft data privacy policy for a specific AR/VR project. This includes key sections like data collection, user rights, and security measures

## Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** organizational policies, procedures and guidelines which relate to documenting business requirements and developing roadmaps for products/services
- KU2.** different data sources and how to access documents and information from data sources
- KU3.** who to involve while collecting business requirements and bringing concepts into production
- KU4.** range of standard templates and tools available and how to use them
- KU5.** how to identify and define business requirements
- KU6.** how to create solution roadmaps and prototypes
- KU7.** how to perform competitive analysis
- KU8.** how to build sales and marketing plans
- KU9.** how to create a business continuity plan

## Generic Skills (GS)

User/individual on the job needs to know how to:

- GS1.** ask for clarification and advice from appropriate people
- GS2.** conduct business contextual discussions
- GS3.** listen effectively and orally communicate information accurately
- GS4.** follow rule-based decision-making processes
- GS5.** make decision on suitable course of action
- GS6.** plan and organize the work to achieve targets and deadlines
- GS7.** work effectively in a customer facing environment
- GS8.** build and maintain positive and effective relationships with customers
- GS9.** analyze the business impact and disseminate relevant information to others
- GS10.** apply problem-solving approaches in different situations
- GS11.** apply balanced judgments to different situations
- GS12.** create accurate and well written documents/reports

## Qualification Pack

### Assessment Criteria

| Assessment Criteria for Outcomes                                                                                                                                                                                                                         | Theory Marks | Practical Marks | Project Marks | Viva Marks |

## Qualification Pack

### SSC/N8803: Establish a functional design of the AR/VR solution based on the defined business requirements

#### Description

This unit is about developing a blue print of AR/VR solution based on business requirements

#### Scope

The scope covers the following :

- Solution strategy
- Continuous improvement

#### Elements and Performance Criteria

To be competent, the user/individual on the job must be able to:

- PC1.** Outline the requirements of various experiences to be included in the AR/VR product/solution
- PC2.** Define acceptance criteria/KPIs for the product/solution
- PC3.** Define roadmap for building prototypes for the product/solution
- PC4.** Evaluate and list down the types of devices/ target devices and platforms for rolling out the AR/VR solution
- PC5.** Review demos with the technology team and validate acceptance criteria for all products
- PC6.** Identify customer segment and experiment with different versions to identify optimum product/solution as per customer requirement
- PC7.** Define the milestones to be achieved as well- as responsibilities of various teams during the product lifecycle
- PC8.** Define plans for UAT and iteration cycles and outline the acceptance criteria for each phase.
- PC9.** Define migration strategy, business continuity, and disaster management plans (if required) for the AR/VR solution
- PC10.** Plan collaboration strategy for IT, R&D, and operations groups to develop, test, and deploy new products/solutions.

#### Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** organizational policies, procedures and guidelines which relate to documenting business requirements and developing roadmaps for products/services
- KU2.** different data sources and how to access documents and information from data sources
- KU3.** who to involve while collecting business requirements and bringing concepts into production
- KU4.** range of standard templates and tools available and how to use them
- KU5.** how to identify and define user experience requirements
- KU6.** how to create solution roadmaps and prototypes

## Qualification Pack

- KU7.** how to perform customer segmentation
- KU8.** KPIs to measure operational performance and trends
- KU9.** stages of project implementation
- KU10.** agile methodologies

## Generic Skills (GS)

User/individual on the job needs to know how to:

- GS1.** ask for clarification and advice from appropriate people
- GS2.** conduct business contextual discussions
- GS3.** listen effectively and orally communicate information accurately
- GS4.** follow rule-based decision-making processes
- GS5.** make decision on suitable course of action
- GS6.** plan and organize the work to achieve targets and deadlines
- GS7.** work effectively in a customer facing environment
- GS8.** build and maintain positive and effective relationships with customers
- GS9.** analyze the business impact and disseminate relevant information to others
- GS10.** apply problem-solving approaches in different situations
- GS11.** apply balanced judgments to different situations
- GS12.** create accurate and well written documents/reports

## Qualification Pack

### Assessment Criteria

## Qualification Pack

### SSC/N8804: Define project plans and processes to develop solutions and drive product effectiveness, ensuring essential KPIs/service goals are met

#### Description

This unit is about assessing processes of product/solution performance and ensuring proposed KPIs fulfill expectations

#### Scope

The scope covers the following :

- Project Management, User Engagement, Testing Roadmap, Traceability and Analytics

#### Elements and Performance Criteria

To be competent, the user/individual on the job must be able to:

- PC1.** Clarify goals and engage stakeholders to gather requirements
- PC2.** Analyze industry trends and understand user needs.
- PC3.** Outline project inclusions and key features
- PC4.** Break the project into manageable tasks
- PC5.** Estimate task durations and set milestones
- PC6.** Identify and assign necessary resources and team roles
- PC7.** Estimate costs and allocate funds for contingencies
- PC8.** Identify potential risks and plan mitigation strategies
- PC9.** Plan updates for stakeholders and team members
- PC10.** Establish feedback loops and adjust plans as necessary
- PC11.** Evaluate the business goals to be achieved from the product/solution
- PC12.** Gather and define KPIs to monitor the performance of the product/solution in collaboration with the other teams
- PC13.** Create a structure for reporting product usage and performance data to relevant stakeholders
- PC14.** Share regular reports on product usage and performance with relevant stakeholders
- PC15.** Develop a feedback loop to continuously collect, implement, and report feedback on product performance, adoption, usability, and conversion
- PC16.** Define strategy for smoother user onboarding and user training to increase user engagement
- PC17.** Create a user maturity model to understand user engagement patterns and measure the lifetime value of the user
- PC18.** Define methods to gather data on user engagement (surveys, questionnaires, etc.)
- PC19.** Define metrics and KPIs to measure satisfactory user engagement
- PC20.** Develop test strategy for the solution and outline the techniques to follow while testing various modules
- PC21.** Plan and develop automation strategy for testing various units and modules

## Qualification Pack

- PC22.** Define general guidelines for various stages of testing (test plan, test case design and running, documentation and reporting)
- PC23.** Create forward traceability to check the progress of development and integration in the desired direction and for the right product
- PC24.** Develop reverse traceability to ensure whether the current product remains on the right track
- PC25.** Assess product performance, user behavior, and product/solution engagement and interaction through analytics

## Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** organizational policies, procedures and guidelines which relate to documenting business requirements and developing roadmaps for products/services
- KU2.** different data sources and how to access documents and information from data sources
- KU3.** who to involve while collecting business requirements and bringing concepts into production
- KU4.** range of standard templates and tools available and how to use them
- KU5.** Project Management Principles
- KU6.** AR/VR Technology understanding
- KU7.** Requirement Analysis
- KU8.** Timeline Estimation
- KU9.** Budgeting
- KU10.** Risk Management
- KU11.** Communication Skills
- KU12.** Monitoring and Adaption
- KU13.** Team Management
- KU14.** frameworks and best practices related to user engagement
- KU15.** methods to discover user pattern and measure the lifetime value of a customer
- KU16.** KPIs to measure operational performance and trends
- KU17.** various testing methods related to AR/VR solutions
- KU18.** tools and techniques for test automation
- KU19.** analytics tools to analyze product performance and user behavior
- KU20.** agile methodologies

## Generic Skills (GS)

User/individual on the job needs to know how to:

- GS1.** ask for clarification and advice from appropriate people
- GS2.** conduct business contextual discussions
- GS3.** listen effectively and orally communicate information accurately
- GS4.** follow rule-based decision-making processes

## Qualification Pack

- GS5.** make decision on suitable course of action
- GS6.** plan and organize the work to achieve targets and deadlines
- GS7.** work effectively in a customer facing environment
- GS8.** build and maintain positive and effective relationships with customers
- GS9.** analyze the business impact and disseminate relevant information to others
- GS10.** apply problem-solving approaches in different situations
- GS11.** apply balanced judgments to different situations
- GS12.** create accurate and well written documents/reports

## Qualification Pack

### Assessment Criteria

| Assessment Criteria for Outcomes                                                                                             | Theory Marks | Practical Marks | Project Marks | Viva Marks |
|------------------------------------------------------------------------------------------------------------------------------|--------------|-----------------|---------------|------------|
|                                                                                                                              | 30           | 50              | -             | 20         |
| <b>PC1.</b> Clarify goals and engage stakeholders to gather requirements                                                     | 1            | 2               | -             | 0.5        |
| <b>PC2.</b> Analyze industry trends and understand user needs.                                                               | 1            | 2               | -             | 0.5        |
| <b>PC3.</b> Outline project inclusions and key features                                                                      | 1            | 2               | -             | 0.5        |
| <b>PC4.</b> Break the project into manageable tasks                                                                          | 1            | 2               | -             | 0.5        |
| <b>PC5.</b> Estimate task durations and set milestones                                                                       | 1            | 2               | -             | 0.5        |
| <b>PC6.</b> Identify and assign necessary resources and team roles                                                           | 1            | 2               | -             | 0.5        |
| <b>PC7.</b> Estimate costs and allocate funds for contingencies                                                              | 1            | 2               | -             | 0.5        |
| <b>PC8.</b> Identify potential risks and plan mitigation strategies                                                          | 1            | 2               | -             | 0.5        |
| <b>PC9.</b> Plan updates for stakeholders and team members                                                                   | 1            | 2               | -             | 0.5        |
| <b>PC10.</b> Establish feedback loops and adjust plans as necessary                                                          | 1            | 2               | -             | 0.5        |
| <b>PC11.</b> Evaluate the business goals to be achieved from the product/solution                                            | 1            | 2               | -             | 1          |
| <b>PC12.</b> Gather and define KPIs to monitor the performance of the product/solution in collaboration with the other teams | 1            | 2               | -             | 1          |
| <b>PC13.</b> Create a structure for reporting product usage and performance data to relevant stakeholders                    | 1            | 2               | -             | 1          |
| <b>PC14.</b> Share regular reports on product usage and performance with relevant stakeholders                               | 1            | 2               | -             | 1          |

### Qualification Pack

| Assessment Criteria for Outcomes                                                                                                                         | Theory Marks | Practical Marks | Project Marks | Viva Marks |
|----------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|-----------------|---------------|------------|
| <b>PC15.</b> Develop a feedback loop to continuously collect, implement, and report feedback on product performance, adoption, usability, and conversion | 1            | 2               | -             | 1          |
| <b>PC16.</b> Define strategy for smoother user onboarding and user training to increase user engagement                                                  | 1            | 2               | -             | 1          |
| <b>PC17.</b> Create a user maturity model to understand user engagement patterns and measure the lifetime value of the user                              | 1            | 2               | -             | 1          |
| <b>PC18.</b> Define methods to gather data on user engagement (surveys, questionnaires, etc.)                                                            | 1            | 2               | -             | 1          |
| <b>PC19.</b> Define metrics and KPIs to measure satisfactory user engagement                                                                             | 1            | 2               | -             | 1          |
| <b>PC20.</b> Develop test strategy for the solution and outline the techniques to follow while testing various modules                                   | 1            | 2               | -             | 1          |
| <b>PC21.</b> Plan and develop automation strategy for testing various units and modules                                                                  | 2            | 2               | -             | 1          |
| <b>PC22.</b> Define general guidelines for various stages of testing (test plan, test case design and running, documentation and reporting)              | 2            | 2               | -             | 1          |
| <b>PC23.</b> Create forward traceability to check the progress of development and integration in the desired direction and for the right product         | 2            | 2               | -             | 1          |
| <b>PC24.</b> Develop reverse traceability to ensure whether the current product remains on the right track                                               | 2            | 2               | -             | 1          |
| <b>PC25.</b> Assess product performance, user behavior, and product/solution engagement and interaction through analytics                                | 2            | 2               | -             | 1          |
| <b>NOS Total</b>                                                                                                                                         | <b>30</b>    | <b>50</b>       | <b>-</b>      | <b>20</b>  |

## Qualification Pack

### SSC/N8809: Define technical parameters to monitor and manage the performance of the AR/VR architecture and develop statistical reports on product performance

#### Description

This unit is about monitoring the performance of implemented AR/VR architecture using technical parameters and boundary conditions

#### Scope

The scope covers the following :

- Tools and KPIs,,Analytics,User Feedback,Continuous Improvement,Performance monitoring and evaluationReporting

#### Elements and Performance Criteria

To be competent, the user/individual on the job must be able to:

- PC1.** Define the possible methods and tools to analyze the technical and operational performance of the AR/VR solution
- PC2.** Define the KPIs for monitoring the performance of the AR/VR solution, and integrate with the KPIs of existing infrastructure, whenever applicable
- PC3.** Define the frequency of measuring KPIs
- PC4.** Define methods for monitoring application and hardware resource usage
- PC5.** Draw map of possible bottlenecks (related to memory, I/O, etc.) in the AR/VR solution to evaluate if there is a need for deeper code and design changes
- PC6.** Monitor analytics using appropriate tools to obtain technical, operational, and business insights such as accuracy, success rate, duration, outcomes, etc
- PC7.** Define methods for monitoring feedback from the user
- PC8.** Define the plan to review technical performance and improve the process efficiency
- PC9.** Collaborate with appropriate stakeholders to identify the methods and tools for monitoring product performance
- PC10.** Monitor overall utilization pattern of the product and calculate estimated vs. actual effort utilized
- PC11.** Evaluate KPIs and analyze the product's performance using suitable analytics tools
- PC12.** Report the metrics and evaluation results to appropriate stakeholders
- PC13.** Perform continuous reviews and obtain feedback on product improvement from appropriate stakeholders

#### Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** organizational policies, procedures, and guidelines which relate to architecture testing

## Qualification Pack

- KU2.** organizational policies and procedures for sharing data
- KU3.** organizational policies and procedures for documenting results of architecture validations
- KU4.** who to involve while performing various architecture validations
- KU5.** range of standard templates and tools available and how to use them
- KU6.** how to devise testing methodologies
- KU7.** how to design standards for developing solutions
- KU8.** how to manage the usage of tools and techniques while implementing solutions at various stages
- KU9.** KPIs to monitor and measure the performance of AR/VR solutions
- KU10.** how to develop plans to incorporate continuous improvement based on requirements
- KU11.** how to analyze and use feedback to improve solutions
- KU12.** how to create standard technical and supporting documents

## Generic Skills (GS)

User/individual on the job needs to know how to:

- GS1.** communicate effectively with clients in writing
- GS2.** follow instructions, guidelines, procedures, rules, and service level agreements
- GS3.** listen effectively and communicate information accurately
- GS4.** follow rule-based decision-making processes
- GS5.** plan and organize the work to achieve targets and meet deadlines
- GS6.** check that your own and/or your peers' work meets customer requirements
- GS7.** analyze the business impact and disseminate relevant information to others
- GS8.** apply problem-solving approaches to different situations
- GS9.** provide opinions on work in a detailed and constructive way
- GS10.** check the work is complete and free from errors
- GS11.** work independently and collaboratively
- GS12.** contribute to the quality of teamwork

## Qualification Pack

### Assessment Criteria

| Assessment Criteria for Outcomes                                                                                                                                      | Theory Marks | Practical Marks | Project Marks | Viva Marks |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|-----------------|---------------|------------|
|                                                                                                                                                                       | 30           | 50              | -             | 20         |
| <b>PC1.</b> Define the possible methods and tools to analyze the technical and operational performance of the AR/VR solution                                          | 2            | 3               | -             | 1          |
| <b>PC2.</b> Define the KPIs for monitoring the performance of the AR/VR solution, and integrate with the KPIs of existing infrastructure, whenever applicable         | 2            | 3               | -             | 1          |
| <b>PC3.</b> Define the frequency of measuring KPIs                                                                                                                    | 2            | 3               | -             | 1          |
| <b>PC4.</b> Define methods for monitoring application and hardware resource usage                                                                                     | 2            | 3               | -             | 1          |

### SSC/N8818: Conduct cutting-edge research and development in AR/VR and other related fields and be updated with the latest trends in technology

#### Description

This unit is about employing market research practice to learn about the latest hardware and software innovations and trends in the AR/VR technology field

#### Scope

The scope covers the following :

- Research, Development

#### Elements and Performance Criteria

To be competent, the user/individual on the job must be able to:

- PC1.** Gather information regarding new use cases and market opportunities in AR/VR
- PC2.** Track latest software and hardware tools and other technological developments related to AR/VR
- PC3.** Conduct research on challenges in AR/VR adoption based on user experience and user expectations
- PC4.** Drive impact through a range of research approaches and tools, including internal and external literature review, qualitative methods (observation, contextual inquiry, interview), and usability
- PC5.** Research on user behavior and adaptations (i.e. how the end goal can be delivered through different actions within the interface) to identify new use cases of AR/VR
- PC6.** Study various industry-specific or region-specific regulatory compliance policies associated with AR/VR solutions
- PC7.** Engage in prototyping, validation, and debugging of early proof-of-concept work with cross-functional teams.
- PC8.** Develop cutting edge algorithms and spatial models to be used in AR/VR products
- PC9.** Participate in research and incubation activities related to AR/VR input and interaction devices

#### Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** organizational policies, procedures, and guidelines which relate to research and development of the AR/VR solution
- KU2.** organizational policies and procedures for sharing data
- KU3.** organizational policies and procedures for documenting research data
- KU4.** who to involve while conducting market research
- KU5.** range of standard templates and tools available and how to use them

## Qualification Pack

- KU6.** how to conduct market research on AR/VR technology
- KU7.** how to track the latest trends and developments in the AR/VR field
- KU8.** tools and techniques to analyze and use feedback to improve user experience
- KU9.** various use cases of AR/VR solution
- KU10.** compliance/regulatory standards and guidelines for AR/VR solution
- KU11.** how to build a prototype and validate the solution
- KU12.** tools and techniques to create 3D models
- KU13.** tools and techniques to render the models
- KU14.** tools and techniques to build end-to-end AR/VR products
- KU15.** tools and techniques to test AR/VR solutions

## Generic Skills (GS)

User/individual on the job needs to know how to:

- GS1.** follow instructions, guidelines, procedures, rules, and service level agreements
- GS2.** ask for clarification and advice from appropriate people
- GS3.** listen effectively and communicate information accurately
- GS4.** follow rule-based decision-making processes
- GS5.** plan and organize the work to achieve targets and meet deadlines
- GS6.** apply problem-solving approaches to different situations
- GS7.** analyze the business impact and disseminate relevant information to others
- GS8.** apply balanced judgments to different situations
- GS9.** work independently and collaboratively
- GS10.** contribute to the quality of teamwork

## Qualification Pack

### Assessment Criteria

## Assessment Guidelines and Assessment Weightage

### Assessment Guidelines

The assessment will consist of a blend of hands-on practical evaluations, viva-voce, and online proctored scenario-based multiple-choice questions ensuring a thorough evaluation of the individual's proficiency in learning outcomes, practical understanding, and real-world application of concepts.

### Minimum Aggregate Passing % at QP Level : 70

**(Please note:** Every Trainee should score a minimum aggregate passing percentage as specified above, to successfully clear the Qualification Pack assessment.)

### Assessment Weightage

Compulsory NOS

|----------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Sector</b>                                | Sector is a conglomeration of different business operations having similar business and interests. It may also be defined as a distinct subset of the economy whose components share similar characteristics and interests.                                                                      |
| <b>Sub-sector</b>                            | Sub-sector is derived from a further breakdown based on the characteristics and interests of its components.                                                                                                                                                                                     |
| <b>Occupation</b>                            | Occupation is a set of job roles, which perform similar/ related set of functions in an industry.                                                                                                                                                                                                |
| <b>Job role</b>                              | Job role defines a unique set of functions that together form a unique employment opportunity in an organisation.                                                                                                                                                                                |
| <b>Occupational Standards (OS)</b>           | OS specify the standards of performance an individual must achieve when carrying out a function in the workplace, together with the Knowledge and Understanding (KU) they need to meet that standard consistently. Occupational Standards are applicable both in the Indian and global contexts. |
| <b>Performance Criteria (PC)</b>             | Performance Criteria (PC) are statements that together specify the standard of performance required when carrying out a task.                                                                                                                                                                    |
| <b>National Occupational Standards (NOS)</b> | NOS are occupational standards which apply uniquely in the Indian context.                                                                                                                                                                                                                       |
| <b>Qualifications Pack (QP)</b>              | QP comprises the set of OS, together with the educational, training and other criteria required to perform a job role. A QP is assigned a unique qualifications pack code.                                                                                                                       |
| <b>Unit Code</b>                             | Unit code is a unique identifier for an Occupational Standard, which is denoted by an 'N'                                                                                                                                                                                                        |
| <b>Unit Title</b>                            | Unit title gives a clear overall statement about what the incumbent should be able to do.                                                                                                                                                                                                        |
| <b>Description</b>                           | Description gives a short summary of the unit content. This would be helpful to anyone searching on a database to verify that this is the appropriate OS they are looking for.                                                                                                                   |
| <b>Scope</b>                                 | Scope is a set of statements specifying the range of variables that an individual may have to deal with in carrying out the function which have a critical impact on quality of performance required.                                                                                            |

## Qualification Pack

|                                         |                                                                                                                                                                                                                                                                                                                                                                        |
|-----------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Knowledge and Understanding (KU)</b> | Knowledge and Understanding (KU) are statements which together specify the technical, generic, professional and organisational specific knowledge that an individual needs in order to perform to the required standard.                                                                                                                                               |
| <b>Organisational Context</b>           | Organisational context includes the way the organisation is structured and how it operates, including the extent of operative knowledge managers have of their relevant areas of responsibility.                                                                                                                                                                       |
| <b>Technical Knowledge</b>              | Technical knowledge is the specific knowledge needed to accomplish specific designated responsibilities.                                                                                                                                                                                                                                                               |
| <b>Core Skills/ Generic Skills (GS)</b> | Core skills or Generic Skills (GS) are a group of skills that are the key to learning and working in today's world. These skills are typically needed in any work environment in today's world. These skills are typically needed in any work environment. In the context of the OS, these include communication related skills that are applicable to most job roles. |
| <b>Electives</b>                        | Electives are NOS/set of NOS that are identified by the sector as contributive to specialization in a job role. There may be multiple electives within a QP for each specialized job role. Trainees must select at least one elective for the successful completion of a QP with Electives.                                                                            |
| <b>Options</b>                          | Options are NOS/set of NOS that are identified by the sector as additional skills. There may be multiple options within a QP. It is not mandatory to select any of the options to complete a QP with Options.                                                                                                                                                          |
| <b>Helpdesk</b>                         | Helpdesk is an entity to which the customers will report their IT problems. IT Service Helpdesk Attendant is responsible for managing the helpdesk.                                                                                                                                                                                                                    |
