Qualification Pack

SSC/Q8805: AR/VR Test Engineer

Brief Job Description

An AR/VR Test Engineer ensures the quality and functionality of augmented reality (AR) and virtual reality (VR) applications and hardware. They design and execute tests, identify and track defects, and collaborate with developers to improve the user experience. This role requires a strong understanding of software testing methodologies, AR/VR technologies, and relevant development tools.

Personal Attributes

AR/VR test engineer must be able to communicate effectively, build relationships with others and collaborate with various stakeholders. They must have strong analytical abilities and a zeal to learn new things.

Applicable National Occupational Standards (NOS)

Compulsory NOS:

1. [SSC/N8815: Define test strategy and test plan for the solution in collaboration with appropriate stakeholders](#)
2. [SSC/N8817: Run the simulated test cases, identify automation opportunities and evaluate the outcomes](#)
3. [SSC/N8824: Identify, document, and track defects and issues found during testing and communicating them to the development team for resolution.](#)
4. [SSC/N8822: Provide support in maintaining and troubleshooting the AR/VR solution](#)
5. [DGT/VSQ/N0102: Employability Skills \(60 Hours\)](#)

Qualification Pack

SSC/N8815: Define test strategy and test plan for the solution in collaboration with appropriate stakeholders

Description

This unit is about strategizing and planning functional and non-functional requirements of test methods for the solution in collaboration with relevant stakeholders

Scope

The scope covers the following :

- Scope, Test Strategy, Test Plan, Test Automation Framework, Integration Testing, Performance testing, Usability testing, Immersive testing, Hardware testing, Best practices

Elements and Performance Criteria

To be competent, the user/individual on the job must be able to:

- PC1.** Gather information on the scope of the product by collaborating with other relevant stakeholders.
- PC2.** Define the objectives of testing the solution
- PC3.** Provide support to the concerned team (e.g., strategy) in developing test strategy
- PC4.** Outline an overall plan for test automation strategy for device/platform solution
- PC5.** Prepare a list of functional/non-functional requirements and real-world experiences for testing
- PC6.** Identify any issues with the requirements for testing and clarify these with appropriate people
- PC7.** Create the test plan to cover all the requirements and prepare a requirement traceability matrix
- PC8.** Identify the interactions between various components of the AR/VR solution
- PC9.** Collaborate with relevant teams (strategy, development, etc.) to develop a set of processes and standards for test automation
- PC10.** Test the integration of the AR VR product/solution fully into the client's existing SDLC cadence
- PC11.** Define tests to measure performance, gameplay, camera tracking, and latency by emulating the real-world environment
- PC12.** Define tests for preproduction testing with testers that fit the product's target demographic
- PC13.** Determine whether the use case selected for AR VR makes sense for the target audience
- PC14.** Test the product for unwarranted experiences such as motion sickness, lack of immersion, eye strain, etc.
- PC15.** Determine optimum physical environment attributes for better immersion (e.g., how much open space is needed around an individual using VR)
- PC16.** Design tests to ensure that the hardware is working properly

Qualification Pack

- PC17.** Test whether the hardware is compatible with the software and other devices used in the simulation
- PC18.** Develop tests to ensure the network environment supports the solution.
- PC19.** Test the accessories used in the solution and ensure it fits the audience's body correctly
- PC20.** Include all possible environment set-ups and user scenarios (e.g., home environment, public spaces, sounds in the background, etc.) while developing the tests/simulations
- PC21.** Access reusable scenarios, test cases, scripts, and tools from the organization's knowledge base
- PC22.** Access or create test data relevant to the requirements
- PC23.** Validate the test plan, test cases, and/or automated scripts with appropriate people

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** organizational policies, procedures, and guidelines which relate to testing various components of the AR/VR solution
- KU2.** organizational policies and procedures for sharing data
- KU3.** organizational policies and procedures for documenting test results
- KU4.** who to involve while performing tests and simulations
- KU5.** range of standard templates and tools available and how to use them
- KU6.** organizational policies, procedures, and guidelines which relate to testing various components of the AR/VR solution
- KU7.** organizational policies and procedures for sharing data
- KU8.** organizational policies and procedures for documenting test results
- KU9.** who to involve while performing tests and simulations
- KU10.** range of standard templates and tools available and how to use them
- KU11.** how to evaluate differentiated testing for unit, sub-system, system, automated, functional, non-functional segments
- KU12.** various testing methodologies
- KU13.** how to distinguish and use testing tools from third party vendor
- KU14.** how to evaluate and select the best simulation tool for your purposes
- KU15.** test automation tools and ways to use them
- KU16.** ways to check the suitability of test cases for automation
- KU17.** how to analyze and use feedback to improve your simulations
- KU18.** working and functionalities of hardware and software components of AR/VR solutions
- KU19.** various tests to be performed in AR/VR solutions
- KU20.** how to evaluate differentiated testing for unit, sub-system, system, automated, functional, non-functional segments
- KU21.** how to devise testing methodologies
- KU22.** how to distinguish and use testing tools from third party vendor
- KU23.** how to evaluate and select the best simulation tool based on the requirements

Qualification Pack

- KU24.** how to identify test automation tools and ways to use them
- KU25.** how to check whether test cases are suitable for automation
- KU26.** how to analyze and use feedback to improve your simulations

Generic Skills (GS)

User/individual on the job needs to know how to:

- GS1.** follow instructions, guidelines, procedures, rules, and service level agreements
- GS2.** ask for clarification and advice from appropriate people
- GS3.** listen effectively and communicate information accurately
- GS4.** follow rule-based decision-making processes
- GS5.** plan and organize the work to achieve targets and meet deadlines
- GS6.** apply problem-solving approaches to different situations
- GS7.** analyze the business impact and disseminate relevant information to others
- GS8.** apply balanced judgments to different situations
- GS9.** work independently and collaboratively
- GS10.** contribute to the quality of teamwork

SSC/N8817: Run the simulated test cases, identify automation opportunities and evaluate the outcomes

Description

This unit is about documenting outcomes of the test cases and devising strategies to employ automated test runs

Scope

The scope covers the following :

- Run test cases, Test Automation, Documentation and Reporting

Elements and Performance Criteria

To be competent, the user/individual on the job must be able to:

PC1. Ensure the correctness of tests

PC2. Run the simulated test cases and evaluate the outcomes

PC3. Perform test coverage analysis

PC4. Identify test cases that can be automated

PC5. Run automated tests for repeatable controls such as space, lighting, soundproofing, power, temperature, sound, and reconfigurable spaces

PC6. Create or modify automated scripts checking for safety and correctness using appropriate languages

PC7. Create documentation on the tests and test results, and log defects of failed cases

PC8. Report the outcomes of the tests or simulations with appropriate people

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

KU1. organizational policies, procedures, and guidelines which relate to testing various components of the AR/VR solution

KU2. organizational policies and procedures for sharing data

KU3. organizational policies and procedures for documenting test results

KU4. who to involve while performing tests and simulations

SSC/N8824: Identify, document, and track defects and issues found during testing and communicating them to the development team for resolution.

Description

This NOS is about to tracking defects

Scope

The scope covers the following :

- Defect Identification, Defect Documentation, Issue Tracking, Clear Communication, Collaborating for resolution, Verifying Fixes, Closure and Reporting,

Elements and Performance Criteria

To be competent, the user/individual on the job must be able to:

- PC1.** Systematically test the application through various techniques, including functional testing, usability testing, and performance testing. Identify issues such as bugs, glitches, user interface inconsistencies, and performance bottlenecks.
- PC2.** Employ testing tools and frameworks suitable for AR/VR applications (such as Unity Test Framework or software testing suites) to aid in identifying defects. Automated testing scripts may also be used for regression testing to ensure that previously functioning features remain stable after updates
- PC3.** For each identified defect, document detailed information
- PC4.** Utilize issue tracking tools (such as Jira, Bugzilla, or Trello) to log defects and manage their lifecycle. This allows for organized tracking of reported issues, making it easier for the team to view the status and history of each defect
- PC5.** Assign defects to appropriate team members (developers, product managers) based on expertise and responsibility, ensuring accountability for resolution
- PC6.** Maintain open lines of communication with the development team. Provide regular updates on discovered defects, especially if new critical issues arise during ongoing testing.
- PC7.** Arrange meetings or forums for testers and developers to discuss defects in more detail, seeking clarifications on the issues identified and potential solutions
- PC8.** Be available to assist developers in understanding the context of the defects. A collaborative approach can lead to quicker identification of the root causes and more effective solutions.
- PC9.** After developers implement fixes, conduct retesting to verify that the issues have been resolved. This includes checking that the defect no longer occurs and that no new issues have been introduced as a result of the changes
- PC10.** . Perform regression testing to confirm that other functionalities remain unaffected by the fixes, ensuring overall stability and performance of the application.
- PC11.** Update defect documentation with the status of the defects once resolved, including the solutions implemented. This serves as a historical record that can be useful for future reference

Qualification Pack

- PC12.** .Generate reports summarizing testing outcomes, including both identified defects and their resolutions. Include metrics such as defect totals, severity distribution, and trends observed during testing cycles
- PC13.** Regularly analyze collected defect data to identify recurring issues or trends. This analysis can guide improvements in both testing practices and development processes.
- PC14.** Encourage feedback from developers and other team members about the defect reporting process to optimize efficiency and clarity in communication

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** working and functionalities of hardware and software components of AR/VR solutions
- KU2.** various tests to be performed in AR/VR solutions
- KU3.** how to evaluate differentiated testing for unit, sub-system, system, automated, functional, non-functional segments
- KU4.** how to devise testing methodologies
- KU5.** how to distinguish and use testing tools from third party vendor
- KU6.** how to evaluate and select the best simulation tool based on the requirements
- KU7.** how to identify test automation tools and ways to use them
- KU8.** how to check whether test cases are suitable for automation
- KU9.** how to analyze and use feedback to improve your simulations
- KU10.** follow instructions, guidelines, procedures, rules, and service level agreements

SSC/N8822: Provide support in maintaining and troubleshooting the AR/VR solution

Description

This unit is about maintaining critical support services to ensure delivery of consistent and reliable services

Scope

The scope covers the following :

- Technical Support, Product and User Analysis, Report Generation, Support Documents

Elements and Performance Criteria

To be competent, the user/individual on the job must be able to:

- PC1.** Verify the scope of various components of the AR VR solution
- PC2.** Determine the type of support required for the solution based on customer ease to connect through chatbot, mails, or call
- PC3.** Handle pre and post production product support and reporting for the AR/VR solution
- PC4.** Provide assistance in using the accessories and other components of the AR VR solution
- PC5.** Resolve issues related to accessories, networks, or software in the solution
- PC6.** Identify pain points in the solution
- PC7.** Assess the utility of various features in the solution
- PC8.** Analyze usability patterns and obtain feedback to understand user's interaction with the solution
- PC9.** Report the observations to relevant teams (development, design, etc.)
- PC10.** Create/maintain a troubleshooting guide for the AR/VR solution
- PC11.** Develop documents, training manuals, videos, and other artefacts related to the usage of various features and accessories in the solution

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** organizational policies, procedures, and guidelines which relate to incident management
- KU2.** organizational policies and procedures for sharing data
- KU3.** organizational policies for documenting operational runbooks
- KU4.** how to collaborate with stakeholders to define create an operational runbook
- KU5.** the range of standard templates and tools available and how to use them
- KU6.** tools and techniques to create clear and concise support content
- KU7.** how to implement analytics-driven solutions
- KU8.** methods to troubleshoot issues related to AR/VR product/solution

Qualification Pack

KU9. how to provide remote repair services

KU10. how to implement best practices and standard operating procedures for administration and support

Generic Skills (GS)

User/individual on the job needs to know how to:

GS1. follow instructions, guidelines, procedures, rules, and service level agreements

GS2. ask for clarification and advice from appropriate people

GS3. listen effectively and communicate information accurately

GS4. follow rule-based decision-making processes

GS5. make decisions on suitable courses

GS6. refer anomalies to the supervisor

GS7. apply problem-solving approaches to different situations

GS8. analyze the business impact and disseminate relevant information to others

GS9. apply balanced judgments to different situations

GS10. check the work is complete and free from errors

DGT/VSQ/N0102: Employability Skills (60 Hours)

Description

This unit is about employability skills, Constitutional values, becoming a professional in the 21st Century, digital, financial, and legal literacy, diversity and Inclusion, English and communication skills, customer service, entrepreneurship, and apprenticeship, getting ready for jobs and career development.

Scope

The scope covers the following :

- Introduction to Employability Skills
- Constitutional values - Citizenship
- Becoming a Professional in the 21st Century
- Basic English Skills
- Career Development & Goal Setting
- Communication Skills
- Diversity & Inclusion
- Financial and Legal Literacy
- Essential Digital Skills
- Entrepreneurship
- Customer Service
- Getting ready for Apprenticeship & Jobs

Elements and Performance Criteria

Introduction to Employability Skills

To be competent, the user/individual on the job must be able to:

- PC1.** identify employability skills required for jobs in various industries
- PC2.** identify and explore learning and employability portals

Constitutional values – Citizenship

To be competent, the user/individual on the job must be able to:

- PC3.** recognize the significance of constitutional values, including civic rights and duties, citizenship, responsibility towards society etc. and personal values and ethics such as honesty, integrity, caring and respecting others, etc.
- PC4.** follow environmentally sustainable practices

Becoming a Professional in the 21st Century

To be competent, the user/individual on the job must be able to:

- PC5.** recognize the significance of 21st Century Skills for employment
- PC6.** practice the 21st Century Skills such as Self-Awareness, Behaviour Skills, time management, critical and adaptive thinking, problem-solving, creative thinking, social and cultural awareness, emotional awareness, learning to learn for continuous learning etc. in personal and professional life

Basic English Skills

To be competent, the user/individual on the job must be able to:

Qualification Pack

- PC7.** use basic English for everyday conversation in different contexts, in person and over the telephone
- PC8.** read and understand routine information, notes, instructions, mails, letters etc. written in English
- PC9.** write short messages, notes, letters, e-mails etc. in English

Career Development & Goal Setting

To be competent, the user/individual on the job must be able to:

- PC10.** understand the difference between job and career
- PC11.** prepare a career development plan with short- and long-term goals, based on aptitude

Communication Skills

To be competent, the user/individual on the job must be able to:

- PC12.** follow verbal and non-verbal communication etiquette and active listening techniques in various settings
- PC13.** work collaboratively with others in a team

Diversity & Inclusion

To be competent, the user/individual on the job must be able to:

- PC14.** communicate and behave appropriately with all genders and PwD
- PC15.** escalate any issues related to sexual harassment at workplace according to POSH Act

Financial and Legal Literacy

To be competent, the user/individual on the job must be able to:

- PC16.** select financial institutions, products and services as per requirement
- PC17.** carry out offline and online financial transactions, safely and securely
- PC18.** identify common components of salary and compute income, expenses, taxes, investments etc
- PC19.** identify relevant rights and laws and use legal aids to fight against legal exploitation

Essential Digital Skills

To be competent, the user/individual on the job must be able to:

- PC20.** operate digital devices and carry out basic internet operations securely and safely
- PC21.** use e- mail and social media platforms and virtual collaboration tools to work effectively
- PC22.** use basic features of word processor, spreadsheets, and presentations

Entrepreneurship

To be competent, the user/individual on the job must be able to:

- PC23.** identify different types of Entrepreneurship and Enterprises and assess opportunities for potential business through research
- PC24.** develop a business plan and a work model, considering the 4Ps of Marketing Product, Price, Place and Promotion
- PC25.** identify sources of funding, anticipate, and mitigate any financial/ legal hurdles for the potential business opportunity

Customer Service

Glossary

Sector	Sector is a conglomeration of different business operations having similar business and interests. It may also be defined as a distinct subset of the economy whose components share similar characteristics and interests.
Sub-sector	Sub-sector is derived from a further breakdown based on the characteristics and interests of its components.
Occupation	Occupation is a set of job roles, which perform similar/ related set of functions in an industry.
Job role	Job role defines a unique set of functions that together form a unique employment opportunity in an organisation.
Occupational Standards (OS)	OS specify the standards of performance an individual must achieve when carrying out a function in the workplace, together with the Knowledge and Understanding (KU) they need to meet that standard consistently. Occupational Standards are applicable both in the Indian and global contexts.
Performance Criteria (PC)	Performance Criteria (PC) are statements that together specify the standard of performance required when carrying out a task.
National Occupational Standards (NOS)	NOS are occupational standards which apply uniquely in the Indian context.
Qualifications Pack (QP)	QP comprises the set of OS, together with the educational, training and other criteria required to perform a job role. A QP is assigned a unique qualifications pack code.
Unit Code	Unit code is a unique identifier for an Occupational Standard, which is denoted by an 'N'
Unit Title	Unit title gives a clear overall statement about what the incumbent should be able to do.
Description	Description gives a short summary of the unit content. This would be helpful to anyone searching on a database to verify that this is the appropriate OS they are looking for.
Scope	Scope is a set of statements specifying the range of variables that an individual may have to deal with in carrying out the function which have a critical impact on quality of performance required.

Qualification Pack

Knowledge and Understanding (KU)	Knowledge and Understanding (KU) are statements which together specify the technical, generic, professional and organisational specific knowledge that an individual needs in order to perform to the required standard.
Organisational Context	Organisational context includes the way the organisation is structured and how it operates, including the extent of operative knowledge managers have of their relevant areas of responsibility.
Technical Knowledge	Technical knowledge is the specific knowledge needed to accomplish specific designated responsibilities.
Core Skills/ Generic Skills (GS)	Core skills or Generic Skills (GS) are a group of skills that are the key to learning and working in today's world. These skills are typically needed in any work environment in today's world. These skills are typically needed in any work environment. In the context of the OS, these include communication related skills that are applicable to most job roles.
Electives	Electives are NOS/set of NOS that are identified by the sector as contributive to specialization in a job role. There may be multiple electives within a QP for each specialized job role. Trainees must select at least one elective for the successful completion of a QP with Electives.
Options	Options are NOS/set of NOS that are identified by the sector as additional skills. There may be multiple options within a QP. It is not mandatory to select any of the options to complete a QP with Options.
Helpdesk	Helpdesk is an entity to which the customers will report their IT problems. IT Service Helpdesk Attendant is responsible for managing the helpdesk.
