## Qualification Pack

### TEL/Q2502: Line Assembler - Telecom Products

#### Brief Job Description

A Line Assembler -Telecom Products is responsible for assembling handsets and telecom equipment at various stages of the production or assembly line, following predefined processes and industry standards. The role involves assembling or fitting pre-assembled electronic PCB boards, along with relevant mechanical and electrical components, onto a metal or plastic chassis within an enclosure. This includes attaching the top cover and securing all related hardware components, such as screws, using appropriate tools like electric or pneumatic screwdrivers. The individual is also responsible for following health and safety standards like ESD-safe procedures and applicable sustainability practices.

#### Personal Attributes

The individual should have a strong technical understanding of electronic components, PCB boards, hardware components, and assembly processes, along with keen attention to detail and strict adherence to ESD safety, sustainability, health & safety standards. The ideal candidate should be \*\*focused, process-oriented, and capable of maintaining both speed and precision to ensure the efficiency of the assembly line.

#### Applicable National Occupational Standards (NOS)

##### Compulsory NOS:

1. [TEL/N2506: Preparing Workspace for Assembly Operations](#)
2. [TEL/N2507: Assembly Operations in Production Line](#)
3. [TEL/N2510: Assembly of Mobile Phone Accessories](#)
4. [TEL/N2508: ESD Safe Procedures and Practices](#)
5. [TEL/N9107: Follow sustainability practices in telecom production and assembly line processes](#)
6. [DGT/VSQ/N0101: Employability Skills \(30 Hours\)](#)

## Qualification Pack

### TEL/N2506: Preparing Workspace for Assembly Operations

#### Description

This unit focuses on the preparation of the workplace for assembly operations, incorporating modern manufacturing technologies and best practices.

#### Scope

The scope covers the following :

- Arrange components/parts and assembly bench
- Arrange tools and equipment required for assembly
- Prepare workspaces for advanced assembly techniques

#### Elements and Performance Criteria

##### *Arrange components/parts and assembly bench*

To be competent, the user/individual on the job must be able to:

- PC1.** retrieve assembled electronic PCB boards, parts of enclosures like metal or plastic chassis, cover, accessories, hardware components like screws, cables and the other related hardware components from stores as per work instructions and verify against inventory records
- PC2.** interpret and confirm understanding of work and assembly instructions
- PC3.** arrange the required assembly parts ergonomically for smooth assembly
- PC4.** check all the assembly parts, including electronics assembled PCB boards, metal enclosures and other hardware items for defects, mismatches, or non-conformance and report the identified issues
- PC5.** identify and segregate 5G-specific hardware for assembly tasks
- PC6.** update inventory records using the ERP system to ensure material availability

##### *Arrange tools and equipment required for assembly*

To be competent, the user/individual on the job must be able to:

- PC7.** collect required tools and equipment as per work instructions
- PC8.** check the calibration and compliance of measuring instruments and critical tools
- PC9.** test tools and equipment for functionality and report malfunctions
- PC10.** use IoT-enabled tools to monitor tool compliance and performance
- PC11.** set up 3D printing workstations for prototyping and small-batch production

##### *Prepare workspaces for advanced assembly techniques*

To be competent, the user/individual on the job must be able to:

- PC12.** set up and calibrate 3D printing equipment for operation
- PC13.** ensure 3D-printed parts meet specifications and are defect-free
- PC14.** follow best practices for using 3D-printed components in assembly

#### Knowledge and Understanding (KU)

## Qualification Pack

The individual on the job needs to know and understand:

- KU1.** the types and specifications of electronic components
- KU2.** safe handling of electronic components
- KU3.** the types of mechanical fasteners and their applications
- KU4.** the use and maintenance of assembly tools and semi-automatic tools
- KU5.** the selection and handling of soldering consumables
- KU6.** safety and environmental standards in assembly operations
- KU7.** the use of ERP systems for inventory and production tracking
- KU8.** the role of IoT-enabled tools in compliance monitoring
- KU9.** the applications of 3D printing in assembly and prototyping
- KU10.** the handling and assembly of 5G-specific hardware components

## Generic Skills (GS)

User/individual on the job needs to know how to:

- GS1.** read and interpret work instructions, manuals, and safety guidelines
- GS2.** communicate effectively with colleagues, supervisors, and stakeholders
- GS3.** maintain accurate inventory records using digital tools
- GS4.** adapt to automation and digital technologies in assembly
- GS5.** follow safety protocols for handling components and equipment
- GS6.** identify and promptly troubleshoot basic issues in tools, equipment, or digital systems
- GS7.** coordinate with teams to ensure timely material availability and workflow efficiency

## Qualification Pack

### Assessment Criteria

| Assessment Criteria for Outcomes                                                                                                                                                                                                                                                         | Theory Marks | Practical Marks | Project Marks | Viva Marks |

### TEL/N2507: Assembly Operations in Production Line

#### Description

This unit is about undertaking assembly operations in a telecom handset production line, integrating automation, smart manufacturing, and advanced quality control measures.

#### Scope

The scope covers the following :

- Assemble telecom devices/products
- Use automation and smart manufacturing methods
- Use digital tools for inventory and production management
- Perform post assembly activities

#### Elements and Performance Criteria

##### *Assemble telecom devices/products*

To be competent, the user/individual on the job must be able to:

- PC1.** check the availability of all the parts required for the assembly of Electronic PCB boards, metal/plastic enclosures, hardware components and all the other components, and tools as per assembly specifications
- PC2.** ensure all required tools and equipment are operational and properly calibrated
- PC3.** conduct pre-assembly safety compliance checks before starting operations
- PC4.** arrange parts and sub-assemblies in the correct sequence for efficient workflow
- PC5.** interpret technical diagrams, specifications, and schematics accurately
- PC6.** handle components carefully, ensuring proper fitment using appropriate tools
- PC7.** assemble components such as RFID tags, Wi-Fi, and Bluetooth modules using correct procedures, sequences, and tools for precision
- PC8.** perform basic quality checks to verify correct assembly before moving to the next stage

##### *Use automation and smart manufacturing methods*

To be competent, the user/individual on the job must be able to:

- PC9.** utilize IoT sensors to track all the items used in the assembly process to ensure placement accuracy and assembly line efficiency
- PC10.** operate Robotic Process Automation (RPA) tools for automated pick-and-place assembly
- PC11.** use machine vision systems for real-time quality inspection and defect detection
- PC12.** use Augmented Reality (AR) tools for interactive training and troubleshooting of assembly processes

##### *Use digital tools for inventory and production management*

To be competent, the user/individual on the job must be able to:

- PC13.** use ERP systems to track materials and schedule production
- PC14.** log component usage accurately to maintain stock levels
- PC15.** coordinate inventory management with production teams

## Qualification Pack

### *Perform post-assembly activities*

To be competent, the user/individual on the job must be able to:

- PC16.** conduct intermediate and final compliance checks for assembly verification
- PC17.** secure the workstation by removing loose components and consumables post-assembly
- PC18.** reconcile used components with issued inventory and document discrepancies
- PC19.** follow store procedures for returning unused components and tools
- PC20.** maintain proper documentation of completed work and inventory usage
- PC21.** ensure hazardous and non-hazardous waste is disposed of safely in designated areas
- PC22.** align assembly processes with ISO/IEC 9001 quality management and 27001 information security standards

## Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** the applicable quality standards, compliance requirements, and health and safety policies
- KU2.** the roles, responsibilities, and reporting structures in the assembly line
- KU3.** handling and assembly of various electronic and mechanical parts
- KU4.** different electronic components used in mobile phones
- KU5.** the importance of polarity in electronic components and its impact on device functionality, and mechanical items used in the assembly process
- KU6.** safe and correct usage of assembly tools including screwdrivers, pliers, and tweezers
- KU7.** the working principles and application of semi-automatic and automated assembly tools
- KU8.** proper handling and storage of PCBs, including baking and flux application
- KU9.** basic soldering techniques, defect identification, and rework procedures
- KU10.** the fundamentals of voltage, current, resistance, and power measurement in telecom equipment
- KU11.** interpretation of electronic circuit diagrams, schematics, and assembly drawings
- KU12.** assembly and testing of telecom RF circuits, power supplies, and multiplexers
- KU13.** identification, pin configuration, and specifications of connectors, cables, and wires
- KU14.** the role of IoT, RPA, and SMT in modern assembly lines for enhanced efficiency and accuracy
- KU15.** the application of AR-based interactive tools for assembly training and troubleshooting
- KU16.** the implementation of machine vision for defect detection and process validation
- KU17.** waste management and disposal protocols for hazardous materials

## Generic Skills (GS)

User/individual on the job needs to know how to:

- GS1.** read and interpret technical documents, assembly instructions, and quality guidelines
- GS2.** communicate effectively with team members and supervisors to ensure workflow efficiency
- GS3.** maintain accurate records of inventory, assembly processes, and quality control checks

## Qualification Pack

- GS4.** adapt to automated assembly techniques such as SMT and RPA for precision manufacturing
- GS5.** follow workplace safety and compliance protocols for handling electronic components
- GS6.** identify and troubleshoot minor defects in assembly using machine vision systems
- GS7.** collaborate with cross-functional teams to optimize assembly processes
- GS8.** ensure compliance with ISO/IEC standards for quality and information security

## Qualification Pack

### Assessment Criteria

| Assessment Criteria for Outcomes                                                                                                                                                                                             | Theory Marks | Practical Marks | Project Marks | Viva Marks |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|-----------------|---------------|------------|
| <i>Assemble telecom devices/products</i>                                                                                                                                                                                     | <b>10</b>    | <b>15</b>       | -             | <b>8</b>   |

### TEL/N2510: Assembly of Mobile Phone Accessories

#### Description

This unit focuses on the assembly, quality control, and packaging of mobile phone accessories such as chargers, earphones, power banks, and wireless devices while adhering to industry standards, safety regulations, and modern manufacturing technologies.

#### Scope

The scope covers the following :

- Assemble mobile phone accessories
- Perform quality inspection and testing
- Carry out post-assembly activities

#### Elements and Performance Criteria

##### *Assemble mobile phone accessories*

To be competent, the user/individual on the job must be able to:

- PC1.** assemble mobile phone accessories according to technical diagrams and process specifications
- PC2.** ensure correct positioning and secure connection of electronic and mechanical parts during assembly
- PC3.** use appropriate tools such as screwdrivers, crimping tools, ultrasonic welders, and automated assembly machines
- PC4.** follow ESD-safe handling procedures to prevent static discharge damage to sensitive components
- PC5.** follow automation and smart manufacturing techniques such as robotic assembly and AI-assisted quality checks

##### *Perform quality inspection and testing*

To be competent, the user/individual on the job must be able to:

- PC6.** conduct basic visual inspections as per quality checklist for defects such as misalignment, loose connections, or surface damage
- PC7.** use appropriate measuring tools such as calipers, multimeters, or gauges to verify dimensions and electrical properties
- PC8.** test assembled accessories for electrical functionality, durability, and compliance with the applicable quality standards
- PC9.** identify and rectify minor assembly errors, escalating critical issues to the supervisor
- PC10.** use digital tools and ERP systems to track component usage and production progress
- PC11.** conduct appropriate quality checks on the assembled accessories to ensure compliance with industry standards

##### *Carry out post-assembly activities*

To be competent, the user/individual on the job must be able to:

## Qualification Pack

- PC12.** follow standard procedures for packaging, labeling, and storing finished accessories to prevent damage
- PC13.** document and report production outputs, quality issues, and inventory usage using digital tracking tools
- PC14.** dispose of defective or rejected components following the applicable guidelines
- PC15.** adhere to workplace safety and cleanliness guidelines throughout the process

## Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** types, functions, and basic specifications of mobile phone accessories such as chargers, cables, batteries, and audio devices, along with their key components
- KU2.** the fundamental concepts of electronic circuits, including voltage, current, and resistance, and their role in the functionality of mobile accessories
- KU3.** the standard procedures for assembling different types of mobile accessories, including handling sequence, safety protocols, and quality considerations
- KU4.** the basic working principles and safe operation of specialized tools (e.g. crimping tools, and ultrasonic welders) and semi-automated/automated assembly systems
- KU5.** the importance of electrostatic discharge (ESD) safety measures and proper grounding technique for safe handling of sensitive electronic components
- KU6.** the relevant key quality parameters and fundamental methods for real-time defect detection and basic automated testing of assembled accessories
- KU7.** common assembly defects, their causes, and basic troubleshooting techniques using visual inspection and simple testing tools
- KU8.** relevant industry standards and basic regulatory guidelines, such as BIS certification
- KU9.** the importance of proper waste disposal and safe handling of defective components
- KU10.** the role of digital production records and basic ERP system usage for tracking components and production progress

## Generic Skills (GS)

User/individual on the job needs to know how to:

- GS1.** read and interpret technical documents, work instructions, and schematic diagrams
- GS2.** communicate effectively with team members and supervisors
- GS3.** pay attention to detail to ensure accuracy in assembly and defect identification
- GS4.** use time efficiently to complete assigned tasks within production timelines
- GS5.** identify and promptly solve assembly defects independently
- GS6.** handle small components with dexterity and hand-eye coordination
- GS7.** adapt to new assembly techniques, smart manufacturing methods, and digital production systems
- GS8.** maintain digital logs and documentation for inventory tracking and workflow optimization
- GS9.** follow workplace safety standards, automation compliance, and industry regulations

## Qualification Pack

### TEL/N2508: ESD Safe Procedures and Practices

#### Description

This unit covers ESD safety procedures during assembly operations and the safe handling of ESD-sensitive components, sub-assemblies, and products. It ensures compliance with best practices to prevent ESD-related failures by integrating automation, smart manufacturing, and updated compliance measures.

#### Scope

The scope covers the following :

- Comply with ESD processes and procedures

#### Elements and Performance Criteria

##### *Comply with ESD processes and procedures*

To be competent, the user/individual on the job must be able to:

- PC1.** follow safe work practices as per the ESD process and protocol
- PC2.** ground all components in the work area
- PC3.** use ESD tools/equipment (static voltage checker, wrist straps, shoe grounders, air ionizers, ionized air guns)
- PC4.** remove non-essential items and equipment carrying electrostatic generating potential
- PC5.** pack/unpack electronic components in compliance with ESD processes
- PC6.** handle all semi-finished products after assembly operations using ESD-free trays and conveyor lines
- PC7.** utilize machine vision systems to identify ESD safety violations and ensure compliance
- PC8.** implement advanced grounding techniques to mitigate electrostatic risks
- PC9.** ensure compliance with ISO 27001 standards for information security in ESD-sensitive operations

#### Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** the necessity of following ESD policies, procedures, and safety guidelines to protect electronic components and ensure product quality
- KU2.** the basics of Electrostatic Discharge (ESD), its sources in the workplace, and its impact on electronic components and product performance
- KU3.** the methods for identifying ESD-sensitive parts, packages, and areas, including the use of precautionary labels, packaging, and handling instructions
- KU4.** classification and properties of ESD-safe materials, appropriate PPEs, and the use of storage/packaging solutions like trays and bags
- KU5.** voltage buildup during routine activities (walking, soldering, cleaning), discharge paths, and associated risks in non-ESD safe areas

## Qualification Pack

- KU6.** essential grounding techniques and accessories (tables, mats, flooring, wrist straps) for minimizing electrostatic risks, including regular inspections and audits
- KU7.** the procedures for conducting ESD audits on workstations, flooring, protective gear, and facility areas, ensuring compliance with ISO 9001 (quality) and ISO 27001 (information security)
- KU8.** proper handling, storage, and stacking methods for ESD-sensitive components, sub-assemblies, and assemblies to prevent failures
- KU9.** use of ionized air guns, machine vision systems, and smart manufacturing techniques for real-time ESD monitoring and automated quality inspection

## Generic Skills (GS)

User/individual on the job needs to know how to:

- GS1.** read and interpret necessary documents related to ESD safety and quality compliance
- GS2.** review manuals, requirement documents, operational health and safety instructions, memos, and reports
- GS3.** communicate effectively with colleagues, peers, and supervisors about ESD safety protocols
- GS4.** coordinate with third-party vendors and other stakeholders for compliance and process improvements
- GS5.** operate and troubleshoot machine vision systems for detecting ESD-related violations
- GS6.** analyze data trends to monitor ESD incidents and take preventive actions
- GS7.** follow latest ISO/IEC standards updates and integrate them into workplace practices
- GS8.** train new employees and team members on advanced ESD safety measures and smart manufacturing techniques

## Qualification Pack

### Assessment Criteria

| Assessment Criteria for Outcomes                                                                                           | Theory Marks | Practical Marks | Project Marks | Viva Marks |

### TEL/N9107: Follow sustainability practices in telecom production and assembly line processes

#### Description

This unit covers sustainability practices in telecom production and assembly lines. It includes identification, segregation, recycling, and responsible disposal of telecom components and materials, ensuring compliance with environmental regulations and promoting sustainable manufacturing processes.

#### Scope

The scope covers the following :

- Identify and segregate recyclable, refurbishable, and hazardous components
- Follow green manufacturing and sustainable assembly practices
- Dispose of and recycle waste
- Comply with environmental and sustainability regulations

#### Elements and Performance Criteria

##### *Identify and segregate recyclable, refurbishable, and hazardous components*

To be competent, the user/individual on the job must be able to:

- PC1.** inspect incoming and outgoing materials to identify recyclable, refurbishable, and hazardous components
- PC2.** categorize telecom components such as PCBs, cables, batteries, and plastic casings for appropriate processing
- PC3.** maintain an inventory of recyclable and hazardous materials to track waste management
- PC4.** store e-waste separately and label it in accordance with Extended Producer Responsibility (EPR) guidelines
- PC5.** identify and report any improper disposal practices to the designated authority

##### *Follow green manufacturing and sustainable assembly practices*

To be competent, the user/individual on the job must be able to:

- PC6.** use energy-efficient equipment, tools, and automated systems to reduce carbon footprint
- PC7.** follow low-emission soldering and lead-free assembly processes to minimize pollution
- PC8.** optimize the use of materials, water, and electricity during production
- PC9.** conduct regular maintenance and calibration of energy-efficient machinery to ensure optimal performance
- PC10.** adopt ISO 14001 (Environmental Management System) compliance in production workflows

##### *Dispose of and recycle waste*

To be competent, the user/individual on the job must be able to:

- PC11.** dispose of hazardous waste (e.g., lithium batteries, chemical residues) in accordance with environmental safety protocols
- PC12.** deposit non-hazardous, recyclable materials (e.g., plastics, aluminum, copper) in designated collection areas

## Qualification Pack

- PC13.** maintain documentation for waste disposal and recycling compliance audits
- PC14.** conduct periodic waste audits to identify opportunities for further waste reduction
- PC15.** coordinate with authorized e-waste recyclers to ensure proper processing and disposal

*Comply with environmental and sustainability regulations*

To be competent, the user/individual on the job must be able to:

- PC16.** follow the applicable national and international environmental laws and regulations for telecom manufacturing
- PC17.** participate in sustainability audits and assessments as per company policies
- PC18.** check for adherence to sustainability guidelines and report deviations
- PC19.** follow corrective actions based on environmental audits and assessments

## Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

- KU1.** the organization's sustainability policies and goals
- KU2.** EPR guidelines, ISO 14001, and e-waste disposal laws
- KU3.** the methods for identifying recyclable and hazardous components
- KU4.** green manufacturing practices, including energy-efficient tools, lead-free soldering, and automation
- KU5.** proper handling, storage, and disposal of e-waste
- KU6.** the techniques for reducing material wastage without impacting production quality
- KU7.** safe and responsible handling of hazardous and non-hazardous materials
- KU8.** environmental impact assessment techniques for telecom production
- KU9.** the documentation requirements for sustainability audits and compliance tracking

## Generic Skills (GS)

User/individual on the job needs to know how to:

- GS1.** read and interpret technical manuals, regulatory guidelines, and environmental compliance documents
- GS2.** effectively report waste management data, sustainability initiatives, and compliance issues
- GS3.** identify and implement solutions to reduce material wastage and improve resource efficiency
- GS4.** coordinate with waste management teams, auditors, and suppliers to implement sustainable practices
- GS5.** assess and interpret sustainability data to improve environmental impact measures
- GS6.** evaluate options for waste management and select the most sustainable alternative

## Qualification Pack

### Assessment Criteria

| Assessment Criteria for Outcomes                                                                                                       | Theory Marks | Practical Marks | Project Marks | Viva Marks |

## Qualification Pack

### DGT/VSQ/N0101: Employability Skills (30 Hours)

#### Description

This unit is about employability skills, Constitutional values, becoming a professional in the 21st Century, digital, financial, and legal literacy, diversity and Inclusion, English and communication skills, customer service, entrepreneurship, and apprenticeship, getting ready for jobs and career development.

#### Scope

The scope covers the following :

- Introduction to Employability Skills
- Constitutional values - Citizenship
- Becoming a Professional in the 21st Century
- Basic English Skills
- Communication Skills
- Diversity & Inclusion
- Financial and Legal Literacy
- Essential Digital Skills
- Entrepreneurship
- Customer Service
- Getting ready for Apprenticeship & Jobs

#### Elements and Performance Criteria

##### *Introduction to Employability Skills*

To be competent, the user/individual on the job must be able to:

**PC1.** understand the significance of employability skills in meeting the job requirements

##### *Constitutional values – Citizenship*

To be competent, the user/individual on the job must be able to:

**PC2.** identify constitutional values, civic rights, duties, personal values and ethics and environmentally sustainable practices

##### *Becoming a Professional in the 21st Century*

To be competent, the user/individual on the job must be able to:

**PC3.** explain 21st Century Skills such as Self-Awareness, Behavior Skills, Positive attitude, self-motivation, problem-solving, creative thinking, time management, social and cultural awareness, emotional awareness, continuous learning mindset etc.

##### *Basic English Skills*

To be competent, the user/individual on the job must be able to:

**PC4.** speak with others using some basic English phrases or sentences

##### *Communication Skills*

To be competent, the user/individual on the job must be able to:

**PC5.** follow good manners while communicating with others

**PC6.** work with others in a team

## Qualification Pack

### *Diversity & Inclusion*

To be competent, the user/individual on the job must be able to:

**PC7.** communicate and behave appropriately with all genders and PwD

**PC8.** report any issues related to sexual harassment

### *Financial and Legal Literacy*

To be competent, the user/individual on the job must be able to:

**PC9.** use various financial products and services safely and securely

**PC10.** calculate income, expenses, savings etc.

**PC11.** approach the concerned authorities for any exploitation as per legal rights and laws

### *Essential Digital Skills*

To be competent, the user/individual on the job must be able to:

**PC12.** operate digital devices and use its features and applications securely and safely

**PC13.** use internet and social media platforms securely and safely

### *Entrepreneurship*

To be competent, the user/individual on the job must be able to:

**PC14.** identify and assess opportunities for potential business

**PC15.** identify sources for arranging money and associated financial and legal challenges

### *Customer Service*

To be competent, the user/individual on the job must be able to:

**PC16.** identify different types of customers

**PC17.** identify customer needs and address them appropriately

**PC18.** follow appropriate hygiene and grooming standards

### *Getting ready for apprenticeship & Jobs*

To be competent, the user/individual on the job must be able to:

**PC19.** create a basic biodata

**PC20.** search for suitable jobs and apply

**PC21.** identify and register apprenticeship opportunities as per requirement

## Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

**KU1.** need for employability skills

**KU2.** various constitutional and personal values

**KU3.** different environmentally sustainable practices and their importance

**KU4.** Twenty first (21st) century skills and their importance

**KU5.** how to use basic spoken English language

**KU6.** Do and dont of effective communication

**KU7.** inclusivity and its importance

**KU8.** different types of disabilities and appropriate communication and behaviour towards PwD

**KU9.** different types of financial products and services

## Qualification Pack

- KU10.** how to compute income and expenses
- KU11.** importance of maintaining safety and security in financial transactions
- KU12.** different legal rights and laws
- KU13.** how to operate digital devices and applications safely and securely
- KU14.** ways to identify business opportunities
- KU15.** types of customers and their needs
- KU16.** how to apply for a job and prepare for an interview
- KU17.** apprenticeship scheme and the process of registering on apprenticeship portal

## Generic Skills (GS)

User/individual on the job needs to know how to:

- GS1.** communicate effectively using appropriate language
- GS2.** behave politely and appropriately with all
- GS3.** perform basic calculations
- GS4.** solve problems effectively
- GS5.** be careful and attentive at work
- GS6.** use time effectively
- GS7.** maintain hygiene and sanitisation to avoid infection

## Qualification Pack

## Assessment Guidelines and Assessment Weightage

### Assessment Guidelines

1. Criteria for assessment for each Qualification Pack will be created by the Sector Skill Council. Each Element/ Performance Criteria (PC) will be assigned marks proportional to its importance in NOS. SSC will also lay down proportion of marks for Theory and Skills Practical for each Element/ PC.
2. The assessment for the theory part will be based on knowledge bank of questions created by the SSC.
3. Assessment will be conducted for all compulsory NOS, and where applicable, on the selected elective/option NOS/set of NOS.
4. Individual assessment agencies will create unique question papers for theory part for each candidate at each examination/training center (as per assessment criteria below).
5. Individual assessment agencies will create unique evaluations for skill practical for every student at each examination/ training center based on these criteria.
6. To pass the Qualification Pack assessment, every trainee should score the Recommended Pass % aggregate for the QP.

## Qualification Pack

7. In case of unsuccessful completion, the trainee may seek reassessment on the Qualification Pack.

**Minimum Aggregate Passing % at QP Level : 50**

(**Please note:** Every Trainee should score a minimum aggregate passing percentage as specified above, to successfully clear the Qualification Pack assessment.)

### Glossary

|                                              |                                                                                                                                                                                                                                                                                                  |
|----------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Sector</b>                                | Sector is a conglomeration of different business operations having similar business and interests. It may also be defined as a distinct subset of the economy whose components share similar characteristics and interests.                                                                      |
| <b>Sub-sector</b>                            | Sub-sector is derived from a further breakdown based on the characteristics and interests of its components.                                                                                                                                                                                     |
| <b>Occupation</b>                            | Occupation is a set of job roles, which perform similar/ related set of functions in an industry.                                                                                                                                                                                                |
| <b>Job role</b>                              | Job role defines a unique set of functions that together form a unique employment opportunity in an organisation.                                                                                                                                                                                |
| <b>Occupational Standards (OS)</b>           | OS specify the standards of performance an individual must achieve when carrying out a function in the workplace, together with the Knowledge and Understanding (KU) they need to meet that standard consistently. Occupational Standards are applicable both in the Indian and global contexts. |
| <b>Performance Criteria (PC)</b>             | Performance Criteria (PC) are statements that together specify the standard of performance required when carrying out a task.                                                                                                                                                                    |
| <b>National Occupational Standards (NOS)</b> | NOS are occupational standards which apply uniquely in the Indian context.                                                                                                                                                                                                                       |
| <b>Qualifications Pack (QP)</b>              | QP comprises the set of OS, together with the educational, training and other criteria required to perform a job role. A QP is assigned a unique qualifications pack code.                                                                                                                       |
| <b>Unit Code</b>                             | Unit code is a unique identifier for an Occupational Standard, which is denoted by an 'N'                                                                                                                                                                                                        |
| <b>Unit Title</b>                            | Unit title gives a clear overall statement about what the incumbent should be able to do.                                                                                                                                                                                                        |
| <b>Description</b>                           | Description gives a short summary of the unit content. This would be helpful to anyone searching on a database to verify that this is the appropriate OS they are looking for.                                                                                                                   |
| <b>Scope</b>                                 | Scope is a set of statements specifying the range of variables that an individual may have to deal with in carrying out the function which have a critical impact on quality of performance required.                                                                                            |

## Qualification Pack

|                                         |                                                                                                                                                                                                                                                                                                                                                                        |
|-----------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Knowledge and Understanding (KU)</b> | Knowledge and Understanding (KU) are statements which together specify the technical, generic, professional and organisational specific knowledge that an individual needs in order to perform to the required standard.                                                                                                                                               |
| <b>Organisational Context</b>           | Organisational context includes the way the organisation is structured and how it operates, including the extent of operative knowledge managers have of their relevant areas of responsibility.                                                                                                                                                                       |
| <b>Technical Knowledge</b>              | Technical knowledge is the specific knowledge needed to accomplish specific designated responsibilities.                                                                                                                                                                                                                                                               |
| <b>Core Skills/ Generic Skills (GS)</b> | Core skills or Generic Skills (GS) are a group of skills that are the key to learning and working in today's world. These skills are typically needed in any work environment in today's world. These skills are typically needed in any work environment. In the context of the OS, these include communication related skills that are applicable to most job roles. |
| <b>Electives</b>                        | Electives are NOS/set of NOS that are identified by the sector as contributive to specialization in a job role. There may be multiple electives within a QP for each specialized job role. Trainees must select at least one elective for the successful completion of a QP with Electives.                                                                            |
| <b>Options</b>                          | Options are NOS/set of NOS that are identified by the sector as additional skills. There may be multiple options within a QP. It is not mandatory to select any of the options to complete a QP with Options.                                                                                                                                                          |
| <b>Sector</b>                           | Sector is a conglomeration of different business operations having similar business and interests. It may also be defined as a distinct subset of the economy whose components share similar characteristics and interests.                                                                                                                                            |
| <b>Sub-sector</b>                       | Sub-sector is derived from a further breakdown based on the characteristics and interests of its components.                                                                                                                                                                                                                                                           |
| <b>Occupation</b>                       | Occupation is a set of job roles, which perform similar/ related set of functions in an industry.                                                                                                                                                                                                                                                                      |
| <b>Job role</b>                         | Job role defines a unique set of functions that together form a unique employment opportunity in an organisation.                                                                                                                                                                                                                                                      |
| <b>Occupational Standards (OS)</b>      | OS specify the standards of performance an individual must achieve when carrying out a function in the workplace, together with the Knowledge and Understanding (KU) they need to meet that standard consistently. Occupational Standards are applicable both in the Indian and global contexts.                                                                       |
| <b>Performance Criteria (PC)</b>        | Performance Criteria (PC) are statements that together specify the standard of performance required when carrying out a task                                                                                                                                                                                                                                           |

## Qualification Pack

|                                        |                                                                                                                                                                                                                                                                                                                                                                        |
|----------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>National Occupational Standard</b>  | NOS are occupational standards which apply uniquely in the Indian context.                                                                                                                                                                                                                                                                                             |
| <b>Qualifications Pack (QP)</b>        | QP comprises the set of OS, together with the educational, training and other criteria required to perform a job role. A QP is assigned a unique qualifications pack code.                                                                                                                                                                                             |
| <b>Unit Code</b>                       | Unit code is a unique identifier for an Occupational Standard, which is denoted by an 'N'                                                                                                                                                                                                                                                                              |
| <b>Unit Title</b>                      | Unit title gives a clear overall statement about what the incumbent should be able to do.                                                                                                                                                                                                                                                                              |
| <b>Description</b>                     | Description gives a short summary of the unit content. This would be helpful to anyone searching on a database to verify that this is the appropriate OS they are looking for.                                                                                                                                                                                         |
| <b>Scope</b>                           | Scope is a set of statements specifying the range of variables that an individual may have to deal with in carrying out the function which have a critical impact on quality of performance required.                                                                                                                                                                  |
| <b>Knowledge and Understanding (K)</b> | Knowledge and Understanding (KU) are statements which together specify the technical, generic, professional and organisational specific knowledge that an individual needs in order to perform to the required standard.                                                                                                                                               |
| <b>Organisational Context</b>          | Organisational context includes the way the organisation is structured and how it operates, including the extent of operative knowledge managers have of their relevant areas of responsibility.                                                                                                                                                                       |
| <b>Technical Knowledge</b>             | Technical knowledge is the specific knowledge needed to accomplish specific designated responsibilities.                                                                                                                                                                                                                                                               |
| <b>Core Skills/ Generic Skills (G)</b> | Core skills or Generic Skills (GS) are a group of skills that are the key to learning and working in today's world. These skills are typically needed in any work environment in today's world. These skills are typically needed in any work environment. In the context of the OS, these include communication related skills that are applicable to most job roles. |
| <b>Electives</b>                       | Electives are NOS/set of NOS that are identified by the sector as contributive to specialization in a job role. There may be multiple electives within a QP for each specialized job role. Trainees must select at least one elective for the successful completion of a QP with Electives                                                                             |
| <b>Options</b>                         | Options are NOS/set of NOS that are identified by the sector as additional skills. There may be multiple options within a QP. It is not mandatory to select any of the options to complete a QP with Options.                                                                                                                                                          |
